	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

11. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

IMU CDU AC D/A OUTPUTS

12. Connect Buffered probes to each of the following test points on TPA #2. Record the total voltage indication on the PAVM for each signal:

a. TB4, 45(hi), 49(lo), IG AC D/A Error

b. TB4, 44(hi), 48(lo), MG AC D/A Error

c. TB4, 43(hi), 47(lo), OG AC D/A Error

CDU REPEATING ACCURACY 45°

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Rows 1, 2 and 3 of the DSKY.

+ GIMBAL LOCK TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

DATE 30 JUN 66

ASSY

Control panel will not light as specified.

23. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY. The GIMBAL LOCK lamps on the DSKY and Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

24. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 13 shall commence flashing. The GIMBAL LOCK indicators on the DSKY and the Monitor panel shall not be lighted. Observe the Gimbal Angles, approximately 225°, 225° and 315° respectively, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

CDU REPEATING ACCURACY (225°)

25. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

TOTAL ATTITUDE OUTPUTS (315°)

26. Perform the following DSKY operations:

a.	VERB 33		ENTR
b.	Observe NO ATT lamp lights		
c.	Observe VERB 06	NOUN 15	Flashing after approx. 20 seconds

27. Observe and record the Gimbal Angles displayed on Row 1, Row 2 and Row 3 of the DSKY.

28. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1Z resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

29. Measure and record the phase angle of each of the outputs specified in step 28.

30. Press the INTERFACE LOAD TEST pushbutton and the TEST START pushbutton on the Test Selector panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

31. Press the INTERFACE LOAD TEST pushbutton and the TEST STOP pushbutton on the Test Selector panel. The pushbutton shall go out.

CDU REPEATING ACCURACY (315°)

32. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp

DATE 30 JUN 66

shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Row 1, Row 2 and Row 3 of the DSKY.

-GIMBAL LOCK TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

33. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp lights
c. Observe
VERB 06 NOUN 17 Flashing after approx. 20 seconds

The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS alarm lamp on the Indicator Control panel shall light. Observe the Gimbal Angles, approximately 289°, are indicated on Row 1, Row 2 and Row 3 of the DSKY.

34. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 20 shall commence flashing. Insure that Row 1, Row 2 and Row 3 display approximately 0°.

IMU CDU COMMAND RATE TEST

NOTE: When only one DSKY is available for testing the following conditions will occur:

a. With the DSKY in the NAV DSKY location the G/N CAUTION lamp on the Monitor panel will not light as specified.

b. With the DSKY in the MAIN DSKY location the PGNS lamp on the Indicator Control panel will not light as specified.

35. Enter VERB 33 and press the ENTR pushbutton on the DSKY. Observe that the COMP ACTY lamp on the DSKY flashes on for a few seconds and then goes out. After approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record indications of Row 1 and Row 2 on the DSKY. (MG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

36. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (IG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall not be lighted.

37. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (OG CDU rate.)

IMU CDU FINE FAIL TEST

38. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp goes out
c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds

Observe the GIMBAL LOCK lamps on the DSKY and the Monitor panel are not lighted.

39. Perform the following DSKY operations:

a. +00100 ENTR
b. Observe
VERB 22 NOUN 22 Flashing
c. +00100 ENTR
d. Observe
VERB 23 NOUN 22 Flashing
e. +00100 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 100 seconds, VERB 01, and NOUN 10 shall commence flashing and the ISS WARNING lamp is lighted.

40. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

IMU CDU COARSE FAIL TEST

41. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
ISS WARNING lamp goes out
c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds
d. +03375 ENTR
e. Observe
VERB 22 NOUN 22 Flashing
f. +03375 ENTR
g. Observe
VERB 23 NOUN 22 Flashing
h. +03375 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 90 seconds, VERB 01 and NOUN 10 shall commence flashing and the ISS WARNING lamp is lighted.

42. Row 1 of the DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

OPTICS RATE TEST

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
ISS WARNING lamp goes out
c. Observe
NO ATT lamp lights

---

d. Observe
VERB 06 NOUN 55 Flashing after approx. 20 seconds

NOTE: Step 44 applies to Indicator Control panel 2021290 only.

44. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS MODE switch to CMC.

NOTE: Step 45 applies to all Indicator Control panels except 2021290.

45. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to CMC.

SHAFT RATE TEST

46. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 25 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2.

TRUNNION RATE TEST

47. Perform the following DSKY operations:

a. VERB 33 ENTR

In approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2 of the DSKY.

48. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
PROG lamp indicates 00

49. Press OPTICS POWER ON pushbutton on Test Control panel. The pushbutton shall go out.

JOB SEMI AUTOMATIC MODE TEST | JDC 12216 REV. K PAGE 1 OF 18
INITIAL TDRR 29882 D.S. PGS 5

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION This test is designed to verify the IMU CDU moding, CDU repeating accuracy, CDU command accuracy, CDU command rate and attitude error positioning commands. The test is under CGC program control but provides operator control intervals to make analog measurements.

TOOLS AND MATERIAL See appropriate section of JDC

IMPORTANT: Insure that cable W226 is removed and connector assembly (2003099) is connected to CGC test connector before proceeding.

NOTE: This JDC contains two separate procedures. Perform the procedures contained in the right column of each page if a CTS UPLINK tape is being used.

Perform the procedures contained in the left column of each page if a CTS UPLINK tape is NOT being used. Do not interchange steps of columns. The UPLINK ACTY lamp on the DSKY will light during performance of the CTS UPLINK Tape Load Procedures.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

Orig 3-18-66

MANUAL LOAD PROCEDURES

TOOLS AND MATERIAL:

None

CTS UPLINK TAPE LOAD PROCEDURES

TOOLS AND MATERIAL:

JDC 12216 CTS UPLINK Tape, P/N 2901649

NOTE: Prepare the CGC for the UPLINK code by establishing the following conditions on the CTS:

a. Connect Self Test Assembly, 2014392, to Buffer Box Assembly, 2014254, by connecting P1 to J4, P2 to J5, P3 to J6, and P4 to J10.

b. Connect Buffer Box Assembly to CTS by connecting W236 P1 to J1 on Buffer Box and P2 to J5 on CTS, W237 P1 to J2 on Buffer Box and P2 to J11 on CTS, W238 P1 to J3 on Buffer Box and P2 to J17 on CTS, and W239 P1 to J9 on Buffer Box and P2 to J18 on CTS.

c. Set digitswitches on Self Test Assembly to 00000.

d. Self Test Panel - Press to light SELF TEST pushbutton.

e. Tape Reader - Set Power switch to ON. Load the CTS UPLINK tape.

MANUAL LOAD PROCEDURES

1. Perform JDC 12215, excluding steps 16 and 17, to establish a Master Initialization condition.

2. Press to light OPTICS POWER ON pushbutton on Test Control panel.

3. Perform following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 01300 ENTR
c. 40266 ENTR

CTS UPLINK TAPE LOAD PROCEDURES

f. Programmer and Monitor panel - Press to light AGC INPUT-CTR and TAPE FREE RUN pushbuttons.

g. RDC Interface panel - Press to light CH33-10 pushbutton.

h. XY Interface panel - Press to light POSITIVE, NEGATIVE, and TAPE READER pushbuttons. Set AGC INPUT COUNTERS switch to 9.

i. Programmer and Monitor panel - Press EXECUTE pushbutton. Verify that tape advances to beginning of first UPLINK code. Press EXECUTE pushbutton.

1. Perform JDC 12215, excluding steps 16 and 17, to establish a Master Initialization condition.

2. Press to light OPTICS POWER ON pushbutton on Test Control panel.

3. Press EXECUTE pushbutton on Programmer and Monitor panel.

3A. When tape stops, observe that VERB 21 NOUN 01 flash on DSKY and then press

JOB SEMI AUTOMATIC MODE TEST

JDC 12216 REV. L PAGE 1 OF 20
INITIAL TDRR 29882 D.S. PGS 5

SUBSYSTEM G & N SYSTEM
ASSY.

DESCRIPTION This test is designed to verify the IMU CDU moding, CDU repeating accuracy, CDU command accuracy, CDU command rate and attitude error positioning commands. The test is under CGC program control but provides operator control intervals to make analog measurements.

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL See appropriate section of JDC

IMPORTANT: Insure that cable W226 is removed and connector assembly (2003099) is connected to CGC test connector before proceeding.

NOTE: This JDC contains two separate procedures. Perform the procedures contained in the right column of each page if a CTS UPLINK tape is being used.

Perform the procedures contained in the left column of each page if a CTS UPLINK tape is NOT being used. Do not interchange steps of columns. The UPLINK ACTY lamp on the DSKY will light during performance of the CTS UPLINK Tape Load Procedures.

CTS UPLINK TAPE LOAD PROCEDURES

TOOLS AND MATERIAL:

JDC 12216 CTS UPLINK Tape, P/N 2901649-002

NOTE: Prepare the CGC for the UPLINK code by establishing the following conditions on the CTS:

a. Connect Self Test Assembly, 2014392, to Buffer Box Assembly, 2014254, by connecting P1 to J4, P2 to J5, P3 to J6, and P4 to J10.
b. Connect Buffer Box Assembly to CTS by connecting W236 P1 to J1 on Buffer Box and P2 to J5 on CTS, W237 P1 to J2 on Buffer Box and P2 to J11 on CTS, W238 P1 to J3 on Buffer Box and P2 to J17 on CTS, and W239 P1 to J9 on Buffer Box and P2 to J18 on CTS.
c. Set digitswitches on Self Test Assembly to 00000.
d. Self Test Panel - Press to light SELF TEST pushbutton.
e. Tape Reader - Set Power switch to ON. Load the CTS UPLINK tape.

TOOLS AND MATERIAL See appropriate section of JDC

IMPORTANT: Insure that cable W226 is removed and connector assembly (2003099) or Restart Monitor module (2898989) is connected to CGC test connector before proceeding.

NOTE: This JDC contains two separate procedures. Perform the procedures contained in the right column of each page if a CTS UPLINK tape is being used.

Perform the procedures contained in the left column of each page if a CTS UPLINK tape is NOT being used. Do not interchange steps of columns. The UPLINK ACTY lamp on the DSKY will light during performance of the CTS UPLINK Tape Load Procedures.

CTS UPLINK TAPE LOAD PROCEDURES

TOOLS AND MATERIAL:

JDC 12216 CTS UPLINK Tape, P/N 2901649-002

NOTE: Prepare the CGC for the UPLINK code by establishing the following conditions on the CTS:

a. Connect Self Test Assembly, 2014392, to Buffer Box Assembly, 2014254, by connecting P1 to J4, P2 to J5, P3 to J6, and P4 to J10.

b. Connect Buffer Box Assembly to CTS by connecting W236 P1 to J1 on Buffer Box and P2 to J5 on CTS, W237 P1 to J2 on Buffer Box and P2 to J11 on CTS, W238 P1 to J3 on Buffer Box and P2 to J17 on CTS, and W239 P1 to J9 on Buffer Box and P2 to J18 on CTS.

c. Set digitswitches on Self Test Assembly to 00000.

d. Self Test Panel - Press to light SELF TEST pushbutton.

e. Tape Reader - Set Power switch to ON. Load the CTS UPLINK tape.

MANUAL LOAD PROCEDURES

1. Perform JDC 12215, excluding steps 16 and 17, to establish a Master Initialization condition.
2. Press to light OPTICS POWER ON pushbutton on Test Control panel.
3. Perform following DSKY operations:

a.	VERB 21	NOUN 01	ENTR
b.	01300		ENTR
c.	40266		ENTR

CTS UPLINK TAPE LOAD PROCEDURES

f. Programmer and Monitor panel - Press to light AGC INPUT-CTR and TAPE FREE RUN pushbuttons.

g. RDC Interface panel - Press to light CH33-10 pushbutton.

h. XY Interface panel - Press to light POSITIVE, NEGATIVE, and TAPE READER pushbuttons. Set AGC INPUT COUNTERS switch to 9.

i. Programmer and Monitor panel - Press EXECUTE pushbutton. Verify that tape advances to beginning of first UPLINK code. Press EXECUTE pushbutton.

1. Perform JDC 12215, excluding steps 16 and 17, to establish a Master Initialization condition.

2. Press to light OPTICS POWER ON pushbutton on Test Control panel.

3. Press EXECUTE pushbutton on Programmer and Monitor panel.

3A. When tape stops, observe that VERB 21 NOUN 01 flash on DSKY and then press

m. +03375 ENTR

The NO ATT lamp shall light momentarily and then go out. After approximately 90 seconds, VERB 01 NOUN 10 shall flash and ISS lamp on Indicator Control panel shall light. Row 1 on DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

CTS UPLINK TAPE LOAD PROCEDURES

VERB 01 NOUN 10 shall flash on DSKY and ISS lamp on Indicator Control panel shall light. Row 1 on DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

IMU CDU COARSE FAIL TEST

39. Press EXECUTE pushbutton on Programmer and Monitor panel. Observe that ISS lamp on Indicator Control panel goes out.

39A. When VERB 21 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

39B. When VERB 22 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

39C. When VERB 23 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel. The NO ATT lamp on DSKY shall light momentarily and then go out. After approximately 90 seconds, VERB 01 NOUN 10 shall flash on DSKY and ISS lamp on Indicator Control panel shall light. Row 1 on DSKY shall indicate 33XXX and Row 3 shall indicate 00030.

MANUAL LOAD PROCEDURES

OPTICS RATE TEST

40. Perform following DSKY operations:

a. VERB 33 ENTR

b. Observe:

ISS lamp on Indicator Control panel goes out

c. Observe:

NO ATT lamp lights

d. Observe:

VERB 06 NOUN 55 Flashing after approx. 20 seconds

41. Using Optics Hand Controller on Indicator Control panel, position the SXT trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 42 applies to Indicator Control panel 2021290 only.

42. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS MODE switch to MAN.

NOTE: Step 43 applies to all Indicator Control panels except 2021290.

43. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

44. Using Optics Hand Controller, drive the Optics Shaft until the SHAFT TPAC indicates approximately +5 degrees.

CTS UPLINK TAPE LOAD PROCEDURES

OPTICS RATE TEST

40. Press EXECUTE pushbutton on Programmer and Monitor panel. Observe that ISS lamp on Indicator Control panel goes out. Observe NO ATT lamp on DSKY lights. After approximately 20 seconds, observe that VERB 06 NOUN 55 flash.

41. Using Optics Hand Controller on Indicator Control panel, position the SXT trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 42 applies to Indicator Control panel 2021290 only.

42. Set OPTICS ZERO switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS MODE switch to MAN.

NOTE: Step 43 applies to all Indicator Control panels except 2021290.

43. Set OPTICS MODE switch on Indicator Control panel to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

44. Using Optics Hand Controller, drive the Optics Shaft until the SHAFT TPAC indicates approximately +5 degrees.

MANUAL LOAD PROCEDURES

45. Set OPTICS MODE switch to CMC.

SHAFT RATE TEST

46. Enter VERB 33 and press ENTR pushbutton on DSKY. After approximately 25 seconds, VERB 06 NOUN 66 shall flash. Record Row 1 and Row 2 indications

TRUNNION RATE TEST

47. Enter VERB 33 and press ENTR pushbutton on DSKY. After approximately 15 seconds, VERB 06 NOUN 66 shall flash. Record Row 1 and Row 2 indications.

48. Enter VERB 34 and press ENTR pushbutton on DSKY. Observe PROG display indicates 00.

OPTICS CDU FAIL TEST

49. Set OPTICS MODE switch on Indicator Control panel to MAN.

50. Perform following DSKY operations:

a. VERB 21 NOUN 10 ENTR

b. 00012 ENTR

c. 00000 ENTR

51. Using Optics Hand Controller on Indicator Control panel, drive optics until SHAFT TPAC indicates 1.65 (±0.15) degrees and TRUNNION TPAC indicates 0.00 degrees. Set OPTICS SPEED switch to HI and LO as required.

CTS UPLINK TAPE LOAD PROCEDURES

45. Set OPTICS MODE switch to CMC.

SHAFT RATE TEST

46. Press EXECUTE pushbutton on Programmer and Monitor panel. After approximately 25 seconds, VERB 06 NOUN 66 shall flash on DSKY. Record Row 1 and Row 2 indications.

TRUNNION RATE TEST

47. Press EXECUTE pushbutton on Programmer and Monitor panel. After approximately 15 seconds, VERB 06 NOUN 66 shall flash on DSKY. Record Row 1 and Row 2 indications.

48. Press EXECUTE pushbutton on Programmer and Monitor panel. Observe PROG display on DSKY indicates 00.

OPTICS CDU FAIL TEST

49. Set OPTICS MODE switch on Indicator Control panel to MAN.

50. Press EXECUTE pushbutton on Programmer and Monitor panel.

51. Using Optics Hand Controller on Indicator Control panel, drive optics until SHAFT TPAC indicates 1.65 (±0.15) degrees and TRUNNION TPAC indicates 0.00 (±0.10) degrees. Set OPTICS SPEED switch to HI and LO as required.

MANUAL LOAD PROCEDURES

52. Perform following DSKY operations:

a. VERB 21 NOUN 10 ENTR

b. 00012 ENTR

c. 00001 ENTR

d. Observe:

TRACKER lamp on DSKY, G/N CAUTION lamp on Monitor panel, and PGNS lamp on Indicator Control panel light.

53. Perform following DSKY operations:

a. VERB 21 NOUN 10 ENTR

b. 00012 ENTR

c. 00000 ENTR

d. Press RSET

e. Observe:

TRACKER lamp on DSKY, G/N CAUTION lamp on Monitor panel, and PGNS lamp on Indicator Control panel go out.

54. Using Optics Hand Controller on Indicator Control panel, drive optics until SHAFT TPAC indicates 0.00 degrees and TRUNNION TPAC indicates 0.85 (±0.10) degrees.

55. Perform following DSKY operations:

a. VERB 21 NOUN 10 ENTR

b. 00012 ENTR

c. 00001 ENTR

d. Observe:

TRACKER lamp on DSKY, G/N CAUTION lamp on Monitor panel, and PGNS lamp on Indicator Control panel light.

CTS UPLINK TAPE LOAD PROCEDURES

52. Press EXECUTE pushbutton on Programmer and Monitor panel. When tape stops, observe that TRACKER lamp on DSKY, G/N CAUTION lamp on Monitor panel, and PGNS lamp on Indicator Control panel light.

53. Press EXECUTE pushbutton on Programmer and Monitor panel. When tape stops, observe that TRACKER lamp on DSKY, G/N CAUTION lamp on Monitor panel, and PGNS lamp on Indicator Control panel go out.

54. Using Optics Hand Controller on Indicator Control panel, drive optics until SHAFT TPAC indicates 0.00 (±0.15) degrees and TRUNNION TPAC indicates 0.85 (±0.10) degrees.

55. Press EXECUTE pushbutton on Programmer and Monitor panel. When tape stops, observe that TRACKER lamp on DSKY, G/N CAUTION lamp on Monitor panel, and PGNS lamp on Indicator Control panel light.

MANUAL LOAD PROCEDURES

56. Perform following DSKY operations:

a. VERB 21 NOUN 10 ENTR

b. 00012 ENTR

c. 00000 ENTR

d. Press RSET

e. Observe:

TRACKER lamp on DSKY, G/N CAUTION lamp on Monitor panel, and PGNS lamp on Indicator Control panel go out.

NOTE: Step 56A applies only when Restart Monitor Module (2898989) is installed.

56A. Perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR

b. 00077 ENTR

c. The contents of Row 1 shall be 00000.

57. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

CTS UPLINK TAPE LOAD PROCEDURES

56. Press EXECUTE pushbutton on Programmer and Monitor panel. When tape stops, observe that TRACKER lamp on DSKY, G/N CAUTION lamp on Monitor panel, and PGNS lamp on Indicator Control panel go out.

NOTE: Step 56A applies only when Restart Monitor Module (2898989) is installed.

56A. Perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR

b. 00077 ENTR

c. The contents of Row 1 shall be 00000.

57. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

58. Press to extinguish POSITIVE, NEGATIVE, and TAPE READER pushbuttons on XY Interface panel. Set AGC INPUT COUNTERS switch to 1.

59. Press to extinguish CH33-10 pushbutton on RDC Interface panel.

60. Press to extinguish TAPE FREE RUN pushbutton on Programmer and Monitor panel. Press to light MONITOR pushbutton. AGC INPUT-CTR pushbutton shall go out.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Establish a Master Initialization condition and insure the Cradle Assembly is set to 32.5°.

2. Perform the following DSKY operations:

a. VERB 57		ENTR	
b. Observe VERB 21	NOUN 01	Flashing	
c. 00010		ENTR	
d. Observe VERB 06	NOUN 01	Flashing	
e. Observe PROG 07		Displayed	

CDU ZERO

3. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamps shall light. After approximately 20 seconds, VERB 06 and NOUN 02 shall commence flashing.

4. Observe the Gimbal Angles, approximately 0.0°, are displayed on Rows 1, 2 and 3 of the NAV DSKY.

TOTAL ATTITUDE SINE INPHASE, TOTAL NULL

5. Set the Voltmeter Input to PAVM SIG 1. Record the total voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142

6. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 03 shall commence flashing.

7. Observe and record the Gimbal Angles displayed on Rows 1, 2 and 3 of the NAV DSKY.

TOTAL ATTITUDE OUTPUTS

8. Set the Voltmeter Input to PAVM SIG 1 or 2 as indicated below. Record the inphase voltage for each corresponding CROSSBAR CONTROL setting on the Primary Signal Selector panel:

Signal	CROSSBAR CONTROL
a. Sin AIG 1X resolver	144
b. Sin AMG 1X resolver	143
c. Sin AOG 1X resolver	142
d. Cos AIG 1X resolver	243
e. Cos AMG 1X resolver	242
f. Cos AOG 1X resolver	241

9. Measure the phase angle of each of the outputs specified in step 8.

TOTAL ATTITUDE, BACKUP MODE

10. Press the INTERFACE LOAD TEST pushbutton on the Test Control panel. The pushbutton shall light. Set the INTERFACE LOAD TEST selector, and the CROSSBAR CONTROL on the Primary Signal Selector panel to the following positions and measure and record the indicated inphase voltages.

	INTERFACE LOAD TEST selector	CROSSBAR CONTROL
a.	2	144
b.	2	243
c.	3	143
d.	3	242
e.	4	142
f.	4	241

11. Press the INTERFACE LOAD TEST pushbutton on the Test Selector panel. The pushbutton shall go out.

IMU CDU AC D/A OUTPUTS

12. Connect Buffered probes to each of the following test points on TPA #2. Record the total voltage indication on the PAVM for each signal:

a. TB4, 45(hi), 49(lo), IG AC D/A Error
b. TB4, 44(hi), 48(lo), MG AC D/A Error
c. TB4, 43(hi), 47(lo), OG AC D/A Error

CDU REPEATING ACCURACY 45°

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY. The NO ATT lamp shall go out. After approximately 100 seconds, VERB 05 and NOUN 30 shall commence flashing. Record indications on Rows 1, 2 and 3 of the DSKY.

TOTAL ATTITUDE COSINE, TOTAL NULL

14. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp lights

34. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 20 seconds, VERB 06 and NOUN 20 shall commence flashing. Insure that Row 1, Row 2 and Row 3 display approximately 0°.

IMU CDU COMMAND RATE TEST

35. Enter VERB 33 and press the ENTR pushbutton on the DSKY. Observe that the COMP ACTY lamp on the DSKY flashes on for a few seconds and then goes out. After approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record indications of Row 1 and Row 2 on the DSKY. (MG CDU rate.) The GIMBAL LOCK lamps on the DSKYs and the Monitor panel, the G & N CAUTION lamp on the Monitor panel and the PGNS lamp on the Indicator Control panel shall be lighted.

36. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (IG CDU rate.) The GIMBAL LOCK lamps on the DSKY and the Monitor panel shall not be lighted.

37. Perform the following DSKY operations:

a. VERB 33 ENTR

After approximately 30 seconds, observe that VERB 06 and NOUN 66 commence flashing. Record the indications on Row 1 and Row 2 of the DSKY. (OG CDU rate.)

IMU CDU FINE FAIL TEST

38. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
NO ATT lamp goes out
c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds

Observe the GIMBAL LOCK lamps on the DSKYs and the Monitor panel are not lighted.

39. Perform the following DSKY operations:

a. +00100 ENTR
b. Observe
VERB 22 NOUN 22 Flashing
c. +00100 ENTR

DATE ______

JOB SEMI AUTOMATIC MODE TEST | JDC 12216 REV - PAGE 6 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

d. Observe
VERB 23 NOUN 22 Flashing
e. +00100 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 100 seconds, VERB 01, and NOUN 10 shall commence flashing. The ISS WARNING and alarm lamps on the Monitor panel and the Indicator Control panel shall light.

40. Row 1 of the DSKYs shall indicate 33XXX and Row 3 shall indicate 00030.

IMU CDU COARSE FAIL TEST

41. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
ISS WARNING lamp goes out
c. Observe
VERB 21 NOUN 22 Flashing after approx. 20 seconds
c. +03375 ENTR
d. Observe
VERB 22 NOUN 22 Flashing
e. +03375 ENTR
f. Observe
VERB 23 NOUN 22 Flashing
g. +03375 ENTR

The NO ATT lamp shall light momentarily then go out. After approximately 90 seconds, VERB 01 and NOUN 10 shall commence flashing. The ISS WARNING and alarm lamps on the Monitor panel and the Indicator Control panel shall light.

42. Row 1 of the DSKYs shall indicate 33XXX and Row 3 shall indicate 00030.

OPTICS RATE TEST

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
ISS WARNING lamp goes out
c. Observe
NO ATT lamp lights
d. Observe
VERB 06 NOUN 55 Flashing after approx. 20 seconds

44. Set the OPTICS MODE switch on the Indicator Control panel to MAN then to ZERO. Wait 15 seconds.

45. Set the OPTICS MODE switch to CMC.

SHAFT RATE TEST

46. Enter VERB 33 and press the ENTR pushbutton on the DSKY. After approximately 25 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2.

TRUNNION RATE TEST

47. Perform the following DSKY operations:

a. VERB 33 ENTR

In approximately 15 seconds, VERB 06 and NOUN 66 shall commence flashing. Record the indications on Row 1 and Row 2 of the DSKY.

48. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
PROG lamp indicates 00

JOB IMU PERFORMANCE TEST

JDC 12217 REV. A PAGE 1 OF 6

INITIAL TDRR 29882 D.S. PGS 9

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION The three IRIG coefficient terms, NBD, ADSRA, and ADIA, are determined and the scale factor and bias terms are determined for each PIPA, the test is computer controlled and requires six IMU positions to determine all parameters.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL

REFERENCES PS 2015000

IMPORTANT Fill in Table 5 before proceeding with this JDC.

INTERVAL

TOOLS AND MATERIAL

INITIALIZATION

1. Establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the DVM by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

	SIGNAL	CROSSBAR CONTROL
a.	X PIPA G/S output	251
b.	Y PIPA G/S output	152
c.	Z PIPA G/S output	252

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Galvanometer to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

c. Set the PIP AND IRIG S.F. MONITOR switch to OFF.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA TCM	2
2	Y PIPA TCM	5
3	Z PIPA TCM	8

Table 2

IMU PERFORMANCE TEST ENTRY

12. Perform following DSKY operations:

VERB 57 ENTR
00001 ENTR

13. When VERB 06 and NOUN 61 flash, insure that ROW 1 indicates +180.00 and that ROW 2 indicates the latitude of the site where this test is being performed (see Table 3).

If ROW 1 and ROW 2 are correct, enter VERB 33 and press ENTR pushbutton then proceed to step 15. If ROW 1 and/or ROW 2 are incorrect, proceed to step 14.

Test Site	Latitude
MIT	+42.366
AC	+42.900
GAEC	+40.748
MSC	+29.556
MILA	+28.516
NAA	+33.921

Table 3

14. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+18000 ENTR
To correct ROW 2 -
VERB 22 ENTR
Test site latitude from Table 3 ENTR

Enter VERB 33 and press ENTR pushbutton.

INITIALIZE TEST POSITION 1

15. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00001. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 17. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 16.

16. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00001 ENTR

+NBDY TEST

17. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+X PIPA S.F. TEST

18. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 2

19. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00002. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 21. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 20.

20. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00002 ENTR

-NBDZ TEST

21. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-X PIPA S.F. TEST

22. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

-NBDX+ADIAX TEST

23. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

INITIALIZE TEST POSITION 3

24. Enter VERB 33 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00003. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 26. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 25.

25. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00003 ENTR

-NBDX TEST

26. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Z PIPA S.F. TEST

27. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 4

28. Enter VERB 34 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00004. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 30. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 29.

29. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00004 ENTR

+NBDY + ADSRAY TEST

30. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-Z PIPA S. F. TEST

31. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

-NBDZ + ADIAZ TEST

32. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

INITIALIZE TEST POSITION 5

33. Enter VERB 33 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00005. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 35. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 34.

34. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
00006 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00005 ENTR

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

35. Tilt the G & N Mounting Fixture to the 0.0° position.

-NBDZ + ADSRAZ

36. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Y PIPA TEST

37. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 6

38. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00006. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 40. If ROW 1, ROW2, and/or ROW 3 indications are incorrect, proceed to step 39.

39. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR

To correct ROW 2 -
VERB 22 ENTR
00006 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00006 ENTR

+NBDX + ADSRAX TEST

40. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-Y PIPA S. F. TEST

41. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

-NBDY + ADIAY

42. Calculate NBDZ + ADSRAZ. Position 5 (step 36) -2 (position 2) (step 21).

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. VERB 21 NOUN 01 ENTR
c. 2637 ENTR
d. NBDZ + ADSRAZ value ENTR

In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record Row 2 indication.

44. Enter VERB 34 into the DSKY and press the ENTR pushbutton.

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

45. Set the G & N Mounting Fixture to a +32.5° tilt angle.

46. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. +00000 ENTR
d. +00000 ENTR
e. +00000 ENTR

47. Perform calculations and complete data sheet.

48. Upon completion of data sheet, make a copy of data sheet and forward immediately to:

INITIAL TDRR 29882 D.S. PGS 9

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION The three IRIG coefficient terms, NBD, ADSRA, and ADIA, are determined and the scale factor and bias terms are determined for each PIPA, the test is computer controlled and requires six IMU positions to determine all parameters.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL

REFERENCES PS 2015000

IMPORTANT Fill in Table 5 before proceeding with this JDC.

INTERVAL

TOOLS AND MATERIAL

INITIALIZATION

1. Establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the DVM by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

	SIGNAL	CROSSBAR CONTROL
a.	X PIPA G/S output	251
b.	Y PIPA G/S output	152
c.	Z PIPA G/S output	252

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Galvanometer to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

> NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

c. Set the PIP AND IRIG S.F. MONITOR switch to OFF.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA TCM	2
2	Y PIPA TCM	5
3	Z PIPA TCM	8

Table 2

IMU PERFORMANCE TEST ENTRY

12. Perform following DSKY operations:

VERB 57	ENTR
00001	ENTR

13. When VERB 06 and NOUN 61 flash, insure that ROW 1 indicates +180.00 and that ROW 2 indicates the latitude of the site where this test is being performed (see Table 3).

If ROW 1 and ROW 2 are correct, enter VERB 33 and press ENTR pushbutton then proceed to step 15. If ROW 1 and/or ROW 2 are incorrect, proceed to step 14.

Test Site	Latitude
MIT	+42.366
AC	+42.900
GAEC	+40.748
MSC	+29.556
MILA	+28.516
NAA	+33.921

Table 3

14. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+18000	ENTR

To correct ROW 2 -

VERB 22	ENTR
Test site latitude from Table 3	ENTR

Enter VERB 33 and press ENTR pushbutton.

INITIALIZE TEST POSITION 1

15. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00001. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 17. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 16.

16. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+00900	ENTR

To correct ROW 2 -

VERB 22	ENTR
+00000	ENTR

To correct ROW 3 -

VERB 23	ENTR
+00001	ENTR

+NBDY TEST

17. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+X PIPA S. F. TEST

18. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 2

19. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00002. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 21. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 20.

20. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+00900	ENTR

To correct ROW 2 -

VERB 22	ENTR
+00000	ENTR

To correct ROW 3 -

VERB 23	ENTR
+00002	ENTR

-NBDZ TEST

21. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-X PIPA S. F. TEST

22. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

-NBDX+ADIAX TEST

23. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

INITIALIZE TEST POSITION 3

24. Enter VERB 33 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00003. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 26. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 25.

25. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+00900	ENTR

To correct ROW 2 -

VERB 22	ENTR
+00000	ENTR

To correct ROW 3 -

VERB 23	ENTR
+00003	ENTR

-NBDX TEST

26. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Z PIPA S. F. TEST

27. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 4

28. Enter VERB 34 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00004. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 30. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 29.

29. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+00900	ENTR

To correct ROW 2 -

VERB 22	ENTR
+00000	ENTR

To correct ROW 3 -

VERB 23	ENTR
+00004	ENTR

+NBDY + ADSRAY TEST

30. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

JOB IMU PERFORMANCE TEST | JDC 12217 REV B PAGE 5 OF 6

SUBSYSTEM G & N SYSTEM | ASSY

-Z PIPA S. F. TEST

31. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

-NBDZ+ ADIAZ TEST

32. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 67 minutes, VERB 06 and NOUN 66 will flash, Record ROW 2 indication.

INITIALIZE TEST POSITION 5

33. Enter VERB 33 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00005. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 35. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 34.

34. Perform the following DSKY operations:

To correct ROW 1 -

ASSY.

DESCRIPTION The three IRIG coefficient terms, NBD, ADSRA, and ADIA, are determined and the scale factor and bias terms are determined for each PIPA, the test is computer controlled and requires six IMU positions to determine all parameters.

REFERENCES PS 2015000

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Fill in Table 5 before proceeding with this JDC. 2. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA Scale Factor Test within 0.2 hours of that time.

INITIALIZATION

1. Establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the DVM by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

SIGNAL	CROSSBAR CONTROL
a. X PIPA G/S output	251
b. Y PIPA G/S output	152
c. Z PIPA G/S output	252

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Galvanometer to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT

VERIFICATION WITH SIDL REQUIRED BEFORE USE

ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

c. Set the PIP AND IRIG S. F. MONITOR switch to OFF.

JOB IMU PERFORMANCE TEST

JDC 12217 REV. D PAGE 1 OF 6

INITIAL TDRR 29882 D.S. PGS 9

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION The three IRIG coefficient terms, NBD, ADSRA, and ADIA, are determined and the scale factor and bias terms are determined for each PIPA, the test is computer controlled and requires six IMU positions to determine all parameters.

REFERENCES PS 2015000

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Fill in Table 5 before proceeding with this JDC. 2. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA Scale Factor Test within 0.2 hours of that time.

INITIALIZATION

1. Establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the DVM by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

SIGNAL	CROSSBAR CONTROL
a. X PIPA G/S output	251
b. Y PIPA G/S output	152
c. Z PIPA G/S output	252

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Galvanometer to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT

ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

c. Set the PIP AND IRIG S. F. MONITOR switch to OFF.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA TCM	2
2	Y PIPA TCM	5
3	Z PIPA TCM	8

IMU PERFORMANCE TEST ENTRY

12. Perform following DSKY operations:

VERB 57 ENTR
00001 ENTR

13. When VERB 06 and NOUN 61 flash, insure that ROW 1 indicates +180.00 and that ROW 2 indicates the latitude of the site where this test is being performed (see Table 3).

If ROW 1 and ROW 2 are correct, enter VERB 33 and press ENTR pushbutton then proceed to step 15. If ROW 1 and/or ROW 2 are incorrect, proceed to step 14.

Test Site	Latitude
MIT	+42.366
AC	+42.900
GAEC	+40.748
MSC	+29.556
MILA	+28.516
NAA	+33.921

Table 3

14. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+18000 ENTR
To correct ROW 2 -
VERB 22 ENTR
Test site latitude from Table 3 ENTR

Enter VERB 33 and press ENTR pushbutton.

INITIALIZE TEST POSITION 1

15. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00001. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 17. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 16.

16. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00001 ENTR

+NBDY TEST

17. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+X PIPA S. F. TEST

18. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 2

19. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00002. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 21. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 20.

20. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00002 ENTR

-NBDZ TEST

21. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-X PIPA S. F. TEST

22. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

-NBDX+ADIAX TEST

23. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

INITIALIZE TEST POSITION 3

24. Enter VERB 33 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00003. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 26. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 25.

25. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00003 ENTR

-NBDX TEST

26. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Z PIPA S. F. TEST

27. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 4

28. Enter VERB 34 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00004. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 30. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 29.

29. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Fill in Table 5 before proceeding with this JDC. 2. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA Scale Factor Test within 0.2 hours of that time.

INITIALIZATION

1. Establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the DVM by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

SIGNAL	CROSSBAR CONTROL
a. X PIPA G/S output	251
b. Y PIPA G/S output	152
c. Z PIPA G/S output	252

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Galvanometer to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT

ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

c. Set the PIP AND IRIG S. F. MONITOR switch to OFF.

SUBSYSTEM G & N SYSTEM | **ASSY.**

DESCRIPTION The three IRIG coefficient terms, NBD, ADSRA, and ADIA, are determined and the scale factor and bias terms are determined for each PIPA, the test is computer controlled and requires six IMU positions to determine all parameters.

REFERENCES PS 2015000

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Fill in Table 5 before proceeding with this JDC. 2. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA Scale Factor Test within 0.2 hours of that time.

INITIALIZATION

1. Establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the DVM by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

SIGNAL	CROSSBAR CONTROL
a. X PIPA G/S output	251
b. Y PIPA G/S output	152
c. Z PIPA G/S output	252

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Galvanometer to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT

VERIFICATION WITH SIDL REQUIRED BEFORE USE

ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

c. Set the PIP AND IRIG S. F. MONITOR switch to OFF.

Table 3

14. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+18000	ENTR

To correct ROW 2 -

VERB 22	ENTR
Test site latitude from Table 3	ENTR

Enter VERB 33 and press ENTR pushbutton.

INITIALIZE TEST POSITION 1

15. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00001. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 17. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 16.

16. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+00900	ENTR

To correct ROW 2 -

VERB 22	ENTR
+00000	ENTR

To correct ROW 3 -

VERB 23	ENTR
+00001	ENTR

+NBDY TEST

17. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+X PIPA S. F. TEST

18. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 2

19. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00002. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 21. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 20.

20. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+00900	ENTR

To correct ROW 2 -

VERB 22	ENTR
+00000	ENTR

To correct ROW 3 -

VERB 23	ENTR
+00002	ENTR

+NBDZ TEST

21. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-X PIPA S. F. TEST

22. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

-NBDX+ADIAX TEST

23. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

INITIALIZE TEST POSITION 3

24. Enter VERB 33 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00003. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 26. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 25.

25. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+00900	ENTR

To correct ROW 2 -

VERB 22	ENTR
+00000	ENTR

To correct ROW 3 -

VERB 23	ENTR
+00003	ENTR

-NBDX TEST

26. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Z PIPA S. F. TEST

27. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 4

28. Enter VERB 34 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00004. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 30. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 29.

29. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+00900	ENTR

To correct ROW 2 -

VERB 22	ENTR
+00000	ENTR

To correct ROW 3 -

VERB 23	ENTR
+00004	ENTR

+NBDY + ADSRAY TEST

30. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

DESCRIPTION The three IRIG coefficient terms, NBD, ADSRA, and ADIA, are determined and the scale factor and bias terms are determined for each PIPA, the test is computer controlled and requires six IMU positions to determine all parameters.

REFERENCES PS 2015000

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Fill in Table 5 before proceeding with this JDC. 2. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA Scale Factor Test within 0.2 hours of that time.

INITIALIZATION

1. Establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the DVM by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

SIGNAL	CROSSBAR CONTROL
a. X PIPA G/S output	251
b. Y PIPA G/S output	152
c. Z PIPA G/S output	252

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Galvanometer to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT

VERIFICATION WITH SIDL REQUIRED BEFORE USE

ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S.F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

c. Set the PIP AND IRIG S.F. MONITOR switch to OFF.

22. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

-NBDX+ADIAX TEST

23. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

INITIALIZE TEST POSITION 3

24. Enter VERB 33 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00003. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 26. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 25.

25. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00003 ENTR

-NBDX TEST

26. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Z PIPA S.F. TEST

27. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 4

28. Enter VERB 34 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00004. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 30. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 29.

29. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00004 ENTR

+NBDY + ADSRAY TEST

30. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

DATE 30 JUN 66

SUBSYSTEM G & N SYSTEM ASSY

-Z PIPA S.F. TEST

31. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

+NBDZ + ADIAZ TEST

32. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

INITIALIZE TEST POSITION 5

33. Enter VERB 33 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00005. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 35. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 34.

34. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
00006 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00005 ENTR

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

35. Tilt the G & N Mounting Fixture to the 0.0° position.

+NBDZ - ADSRAZ

36. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Y PIPA TEST

37. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 6

38. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00006. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 40. If ROW 1, ROW2, and/or ROW 3 indications are incorrect, proceed to step 39.

39. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR

SUBSYSTEM G & N SYSTEM ASSY

To correct ROW 2 -
VERB 22 ENTR
00037 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00006 ENTR

+NBDX + ADSRAX TEST

40. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-Y PIPA S. F. TEST

41. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

-NBDY + ADIAY

42. Calculate -NBDZ - ADSRAZ: line k-2 (line c).

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. VERB 21 NOUN 01 ENTR
c. 2637 ENTR
d. -NBDZ - ADSRAZ value ENTR
e. Press KEY REL if it flashes.

In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record Row 2 indication.

44. Enter VERB 34 into the DSKY and press the ENTR pushbutton.

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

45. Set the G & N Mounting Fixture to a +32.5° tilt angle.

46. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. +00000 ENTR
d. +00000 ENTR
e. +00000 ENTR

47. Perform calculations and complete data sheet.

48. Upon completion of data sheet, make a copy of data sheet and forward immediately to:

REFERENCES PS 2015000

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Fill in Table 5 before proceeding with this JDC. 2. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA Scale Factor Test within 0.2 hours of that time.

INITIALIZATION

1. Establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the SCOPE by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

SIGNAL	CROSSBAR CONTROL
a. X PIPA G/S output	251
b. Y PIPA G/S output	152
c. Z PIPA G/S output	252

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Galvanometer to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT

VERIFICATION WITH SIDL REQUIRED BEFORE USE

ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting

REFERENCES PS 2015000

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Fill in Table 5 before proceeding with this JDC. 2. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA Scale Factor Test within 0.2 hours of that time.

INITIALIZATION

1. Establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the SCOPE by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

SIGNAL	CROSSBAR CONTROL
a. X PIPA G/S output	251
b. Y PIPA G/S output	152
c. Z PIPA G/S output	252

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Galvanometer to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT

VERIFICATION WITH SIDL REQUIRED BEFORE USE

ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting

2	Y PIPA TCM	5
3	Z PIPA TCM	8

Table 2

IMU PERFORMANCE TEST ENTRY

12. Set the PIP and IRIG S. F. MONITOR switch to OFF and perform the following DSKY operations:

VERB 57 ENTR
00001 ENTR

13. When VERB 06 and NOUN 61 flash, insure that ROW 1 indicates +180.00 and that ROW 2 indicates the latitude of the site where this test is being performed (see Table 3).

If ROW 1 and ROW 2 are correct, enter VERB 33 and press ENTR pushbutton then proceed to step 15. If ROW 1 and/or ROW 2 are incorrect, proceed to step 14.

Test Site	Latitude
MIT	+42.366
AC	+42.902
GAEC	+40.748
MSC	+29.556
MILA	+28.516
NAA	+33.921

Table 3

14. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+18000 ENTR
To correct ROW 2 -
VERB 22 ENTR
Test site latitude from Table 3 ENTR

Enter VERB 33 and press ENTR pushbutton.

INITIALIZE TEST POSITION 1

15. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00001. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 17. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 16.

16. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00001 ENTR

+NBDY TEST

17. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+X PIPA S. F. TEST

18. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 2

19. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00002. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 21. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 20.

20. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00002 ENTR

+NBDZ TEST

21. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-X PIPA S. F. TEST

22. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

-NBDX+ADIAX TEST

23. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

INITIALIZE TEST POSITION 3

24. Enter VERB 33 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00003. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 26. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 25.

25. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00003 ENTR

-NBDX TEST

26. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Z PIPA S. F. TEST

27. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 4

28. Enter VERB 34 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00004. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 30. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 29.

29. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00004 ENTR

+NBDY + ADSRAY TEST

30. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-Z PIPA S. F. TEST

31. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

+NBDZ + ADIAZ TEST

32. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

INITIALIZE TEST POSITION 5

33. Enter VERB 33 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00005. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 35. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 34.

34. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00037 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00005 ENTR

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

35. Tilt the G & N Mounting Fixture to the 0.0° position.

+NBDZ - ADSRAZ

36. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Y PIPA TEST

37. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 6

38. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00006. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 40. If ROW 1, ROW2, and/or ROW 3 indications are incorrect, proceed to step 39.

39. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR

To correct ROW 2 -
VERB 22 ENTR
+00037 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00006 ENTR

+NBDX + ADSRAX TEST

40. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-Y PIPA S. F. TEST

41. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

-NBDY + ADIAY

42. Calculate -NBDZ - ADSRAZ: line k-2 (line c).

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. VERB 21 NOUN 01 ENTR
c. 2637 ENTR
d. Enter the calculated value of -NBDZ -ADSRAZ into the DSKY as ±XXX.XX and press the ENTR pushbutton.
e. If KEY REL indicator on DSKY flashes press KEY REL pushbutton.

In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record Row 2 indication.

44. Enter VERB 34 into the DSKY and press the ENTR pushbutton.

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

45. Set the G & N Mounting Fixture to a +32.5° tilt angle.

46. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. +00000 ENTR
d. +00000 ENTR
e. +00000 ENTR

47. Perform calculations and complete data sheet.

48. Upon completion of data sheet, make a copy of data sheet and forward immediately to:

INITIAL TDRR 29882 D.S. PGS 40

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION The three IRIG coefficient terms, BD, ADSRA, and ADIA, are determined and the scale factor and bias terms are determined for each PIPA, the test is computer controlled and requires six IMU positions to determine all parameters.

REFERENCES PS 2015000

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Fill in Table 5. Record most recent historical values (up to three values) and test dates for coefficient terms BD, ADSRA, ADIA, Δ SF (A) and A_B from ISS testing and from any prior runs of this JDC.

2. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not initialize a test position if less than 90 minutes remain before time of overflow.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the SCOPE by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

SIGNAL	CROSSBAR CONTROL
a. X PIPA G/S output	251
b. Y PIPA G/S output	152
c. Z PIPA G/S output	252

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Galvanometer to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

14. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+18000 ENTR

To correct ROW 2 -
VERB 22 ENTR
Test site latitude from Table 3 ENTR

Enter VERB 33 and press ENTR pushbutton.

INITIALIZE TEST POSITION 1

15. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00001. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 17. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 16.

16. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR

To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR

To correct ROW 3 -
VERB 23 ENTR
+00001 ENTR

+BDY TEST

17. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+X PIPA S.F. TEST

18. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

DATE 30 JUN 66

INITIALIZE TEST POSITION 2

19. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00002. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 21. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 20.

20. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR

To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR

To correct ROW 3 -
VERB 23 ENTR
+00002 ENTR

+BDZ TEST

21. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-X PIPA S.F. TEST

22. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

-BDX + ADIAX TEST

23. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

INITIALIZE TEST POSITION 3

24. Enter VERB 33 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00003. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 26. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 25.

25. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR

To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR

To correct ROW 3 -
VERB 23 ENTR
+00003 ENTR

-BDX TEST

26. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Z PIPA S.F. TEST

27. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 4

28. Enter VERB 34 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900,

DATE 30 JUN 66

ROW 2 indicates +00000, and ROW 3 indicates +00004. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 30. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 29.

29. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00004 ENTR

+BDY + ADSRAY TEST

30. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-Z PIPA S. F. TEST

31. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

+BDZ + ADIAZ TEST

32. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

INITIALIZE TEST POSITION 5

33. Enter VERB 33 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00005. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 35. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 34.

34. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00037 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00005 ENTR

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

35. Tilt the G & N Mounting Fixture to the 0.0° position.

+BDZ - ADSRAZ

36. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Y PIPA TEST

37. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 6

38. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN

---

66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00006. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 40. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 39.

39. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00037 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00006 ENTR

+BDX + ADSRAX TEST

40. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-BDY + ADIAY

41. Calculate -BDZ - ADSRAZ as shown on data sheet.

-Y PIPA S. F. TEST

42. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. VERB 21 NOUN 01 ENTR
c. 2637 ENTR
d. Enter the calculated value of -BDZ -ADSRAZ into the DSKY as ±XXX.XX and press the ENTR pushbutton.
e. If KEY REL indicator on DSKY flashes press KEY REL pushbutton.

In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record Row 2 indication.

44. Enter VERB 34 into the DSKY and press the ENTR pushbutton.

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

45. Set the G & N Mounting Fixture to a +32.5° tilt angle.

46. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. +00000 ENTR
d. +00000 ENTR
e. +00000 ENTR

47. Calculate coefficient terms BD, ADSRA, ADIA, ΔSF(A), and A_B. Record results.

48. Calculate coefficient stability terms D_1, D_2, and D_3 for each coefficient and record results as the initial values. (A total of four coefficient values are required in order to calculate a D_3 term.) If all stability term values are within the maximums given, record the results as the final values and proceed to the next step. If any

---

stability term value exceeds the maximum given, retest the IMU by performing the retest sequence given in steps 50 through 55.

49. Upon completion of data sheet, make a copy of data sheet and forward immediately to:

Inertial Subsystem Development
Div. #63
Instrumentation Laboratory
75 Cambridge Parkway
Cambridge, Mass. 02042

RETEST SEQUENCE

NOTE: The following steps are to be performed only if the stability values calculated in step 48 exceed maximum values on the initial run.

50. Repeat steps 1 through 47. Record results on data sheet spaces provided.

51. Perform JDC 12204 to downmode system to ISS Standby.

52. Perform JDC 12204 to advance system to ISS Operate.

53. Repeat steps 1 through 47.

54. Calculate coefficient stability terms D_1, D_2 and D_3 for each coefficient and record results as the final values.

55. Return to step 49.

JOB IMU PERFORMANCE TEST

JDC 12217 REV. K PAGE 1 OF 8

INITIAL TDRR 29882 D.S. PGS 42

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION The three IRIG coefficient terms, BD, ADSRA, and ADIA, are determined and the scale factor and bias terms are determined for each PIPA, the test is computer controlled and requires six IMU positions to determine all parameters.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL

REFERENCES PS 2015000

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Fill in Table 5. Record most recent historical values (up to three values) and test dates for coefficient terms BD, ADSRA, ADIA, Δ SF (A) and A_B from ISS testing and from any prior runs of this JDC.

2. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not initialize a test position if less than 90 minutes remain before time of overflow.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the SCOPE by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

SIGNAL	CROSSBAR CONTROL
a. X PIPA G/S output	251
b. Y PIPA G/S output	152
c. Z PIPA G/S output	252

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Current Source Monitor panel to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting

Table 2

IMU PERFORMANCE TEST ENTRY

12. Set the PIP and IRIG S.F. MONITOR switch to OFF and perform the following DSKY operations:

VERB 57 ENTR
00001 ENTR

13. When VERB 06 and NOUN 61 flash, insure that ROW 1 indicates +180.00 and that ROW 2 indicates the latitude of the site where this test is being performed (see Table 3). If ROW 1 and ROW 2 are correct, enter VERB 33 and press ENTR pushbutton then proceed to step 15. If ROW 1 and/or ROW 2 are incorrect, proceed to step 14.

Test Site	Latitude
MIT	+42.366
AC	+42.902
GAEC	+40.748
MSC	+29.556
MILA	+28.516
NAA	+33.921

Table 3

14. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+18000 ENTR
To correct ROW 2 -
VERB 22 ENTR
Test site latitude from Table 3 ENTR

Enter VERB 33 and press ENTR pushbutton.

INITIALIZE TEST POSITION 1

15. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00001. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 17. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 16.

16. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00001 ENTR

+BDY TEST

17. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+X PIPA S. F. TEST

18. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 2

19. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00002. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 21. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 20.

20. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00002 ENTR

+BDZ TEST

21. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-X PIPA S. F. TEST

22. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

22A. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 00407 ENTR
c. 77757 ENTR
d. VERB 21 NOUN 01 ENTR
e. 00411 ENTR
f. 00020 ENTR

-BDX + ADIAX TEST

23. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

23A. Perform the following DSKY operations:

a. VERB 06 NOUN 03 ENTR
b. 02530 ENTR
c. Record ROW 1 indication.
d. ENTR
e. 02531 ENTR
f. Record ROW 1 indication.

INITIALIZE TEST POSITION 3

24. Enter VERB 33 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00003. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 26. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 25.

25. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR

To correct ROW 3 -
VERB 23 ENTR
+00003 ENTR

-BDX TEST

26. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Z PIPA S.F. TEST

27. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 4

28. Enter VERB 34 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00004. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 30. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 29.

29. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00004 ENTR

+BDY + ADSRAY TEST

30. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-Z PIPA S.F. TEST

31. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

31A. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 00405 ENTR
c. 00020 ENTR
d. VERB 21 NOUN 21 ENTR
e. 00407 ENTR
f. 77757 ENTR

+BDZ + ADIAZ TEST

32. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

32A. Perform the following DSKY operations:

a. VERB 06 NOUN 03 ENTR
b. 02530 ENTR
c. Record ROW 1 indication.
d. ENTR
e. 02531 ENTR
f. Record ROW 1 indication.

INITIALIZE TEST POSITION 5

33. Enter VERB 33 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00005. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 35. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 34.

34. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00037 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00005 ENTR

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

35. Tilt the G & N Mounting Fixture to the 0.0° position.

+BDZ - ADSRAZ

36. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Y PIPA TEST

37. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 6

38. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00006. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 40. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 39.

39. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00037 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00006 ENTR

+BDX + ADSRAX TEST

40. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-BDY + ADIAY

41. Calculate -BDZ - ADSRAZ as shown on data sheet.

41A. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 00405 ENTR
c. 77757 ENTR
d. VERB 21 NOUN 01 ENTR
e. 00411 ENTR
f. 00020 ENTR

-Y PIPA S.F. TEST

42. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

NOTE: Read and understand step 43 before proceeding.

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. VERB 21 NOUN 01 ENTR
c. 02637 ENTR
d. Enter the calculated value of -BDZ -ADSRAZ into the DSKY as ±XXX.XX and press the ENTR pushbutton.
e. VERB 06 NOUN 20 ENTR
f. Record exact time of pressing ENTR in e above.
g. Record ROW 1, ROW 2, and ROW 3 indications.
h. One hour after pressing ENTR in e above, press ENTR again.
i. Record exact time of pressing ENTR in h above.
j. Record ROW 1, ROW 2, and ROW 3 indications.
k. If KEY REL indicator on DSKY flashes press KEY REL pushbutton.
l. Observe
VERB 06 NOUN 66 Flashing
m. Record ROW 2 indication.

44. Enter VERB 34 into the DSKY and press the ENTR pushbutton.

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

45. Set the G & N Mounting Fixture to a +32.5° tilt angle.

46. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. +00000 ENTR
d. +00000 ENTR
e. +00000 ENTR

47. Calculate coefficient terms BD, ADSRA, ADIA, ∆SF(A), and A_B. Record results.

48. Calculate coefficient stability terms D_1, D_2, and D_3 for each coefficient and record results as the initial values. (A total of four coefficient values are required in order to calculate a D_3 term.) If all stability term values are within the maximums given, record the results as the final values and proceed to the next step. If any

---

stability term value exceeds the maximum given, retest the IMU by performing the retest sequence given in steps 50 through 55.

49. Upon completion of data sheet, make a copy of data sheet and forward immediately to:

Inertial Subsystem Development
Div. #63
Instrumentation Laboratory
75 Cambridge Parkway
Cambridge, Mass. 02042

RETEST SEQUENCE

NOTE: The following steps are to be performed only if the stability values calculated in step 48 exceed maximum values on the initial run.

50. Repeat steps 1 through 47. Record results on data sheet spaces provided.

51. Perform JDC 12204 to downmode system to ISS Standby.

52. Perform JDC 12204 to advance system to ISS Operate.

53. Repeat steps 1 through 47.

54. Calculate coefficient stability terms D_1, D_2 and D_3 for each coefficient and record results as the final values.

55. Return to step 49.

JOB IMU PERFORMANCE TEST

JDC 12217 **REV.** L **PAGE** 1 **OF** 8
INITIAL TDRR 29882 **D.S. PGS** 43

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION The three IRIG coefficient terms, BD, ADSRA, and ADIA, are determined and the scale factor and bias terms are determined for each PIPA, the test is computer controlled and requires six IMU positions to determine all parameters.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL

REFERENCES PS 2015000

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Fill in Table 5. Record most recent historical values (up to three values) and test dates for coefficient terms BD, ADSRA, ADIA, ΔSF (A) and A_B from IRIG Inspection and Acceptance Data (last retest average value), ISS testing, prior runs of this JDC, or prior spacecraft testing.

2. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not initialize a test position if less than 90 minutes remain before time of overflow.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the SCOPE by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

SIGNAL	CROSSBAR CONTROL
a. X PIPA G/S output	251
b. Y PIPA G/S output	152
c. Z PIPA G/S output	252

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Current Source Monitor panel to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting

2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Table 2

IMU PERFORMANCE TEST ENTRY

12. Set the PIP and IRIG S.F. MONITOR switch to OFF and perform the following DSKY operations:

VERB 57 ENTR
00001 ENTR

13. When VERB 06 and NOUN 61 flash, insure that ROW 1 indicates +180.00 and that ROW 2 indicates the latitude of the site where this test is being performed (see Table 3). If ROW 1 and ROW 2 are correct, enter VERB 33 and press ENTR pushbutton then proceed to step 15. If ROW 1 and/or ROW 2 are incorrect, proceed to step 14.

Test Site	Latitude
MIT	+42.366
AC	+42.902
GAEC	+40.748
MSC	+29.556
MILA	+28.516
NAA	+33.921

Table 3

14. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+18000 ENTR
To correct ROW 2 -
VERB 22 ENTR
Test site latitude from Table 3 ENTR

Enter VERB 33 and press ENTR pushbutton.

INITIALIZE TEST POSITION 1

15. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00001. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 17. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 16.

16. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00001 ENTR

+BDY TEST

17. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+X PIPA S. F. TEST

18. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 2

19. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00002. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 21. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 20.

20. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00002 ENTR

+BDZ TEST

21. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-X PIPA S. F. TEST

22. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

22A. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 00407 ENTR
c. 77757 ENTR
d. VERB 21 NOUN 01 ENTR
e. 00411 ENTR
f. 00020 ENTR

-BDX + ADIAX TEST

23. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

23A. Perform the following DSKY operations:

a. VERB 06 NOUN 03 ENTR
b. 02530 ENTR
c. Record ROW 1 indication.
d. ENTR
e. 02531 ENTR
f. Record ROW 1 indication.

INITIALIZE TEST POSITION 3

24. Enter VERB 33 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00003. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 26. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 25.

25. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR

To correct ROW 3 -
VERB 23 ENTR
+00003 ENTR

-BDX TEST

26. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Z PIPA S. F. TEST

27. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 4

28. Enter VERB 34 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00004. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 30. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 29.

29. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR

To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR

To correct ROW 3 -
VERB 23 ENTR
+00004 ENTR

+BDY + ADSRAY TEST

30. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-Z PIPA S. F. TEST

31. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

31A. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 00405 ENTR
c. 00020 ENTR
d. VERB 21 NOUN 01 ENTR
e. 00407 ENTR
f. 77757 ENTR

+BDZ + ADIAZ TEST

32. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

32A. Perform the following DSKY operations:

a. VERB 06 NOUN 03 ENTR
b. 02530 ENTR
c. Record ROW 1 indication.
d. ENTR
e. 02531 ENTR
f. Record ROW 1 indication.

INITIALIZE TEST POSITION 5

33. Enter VERB 33 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00005. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 35. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 34.

34. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR

To correct ROW 2 -
VERB 22 ENTR
+00037 ENTR

To correct ROW 3 -
VERB 23 ENTR
+00005 ENTR

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

35. Tilt the G & N Mounting Fixture to the 0.0° position.

+BDZ - ADSRAZ

36. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Y PIPA TEST

37. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 6

38. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00006. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 40. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 39.

39. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR

To correct ROW 2 -
VERB 22 ENTR
+00037 ENTR

To correct ROW 3 -
VERB 23 ENTR
+00006 ENTR

+BDX + ADSRAX TEST

40. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-BDY + ADIAY

41. Calculate -BDZ - ADSRAZ as shown on data sheet.

-Y PIPA S. F. TEST

42. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

42A. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 00405 ENTR
c. 77757 ENTR
d. VERB 21 NOUN 01 ENTR
e. 00411 ENTR
f. 00020 ENTR

NOTE: Read and understand step 43 before proceeding.

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. VERB 21 NOUN 01 ENTR
c. 02637 ENTR
d. Enter the calculated value of -BDZ -ADSRAZ into the DSKY as ±XXX.XX and press the ENTR pushbutton.
e. VERB 06 NOUN 20 ENTR
f. Record exact time of pressing ENTR in e above.
g. Record ROW 1, ROW 2, and ROW 3 indications.
h. One hour after pressing ENTR in e above, press ENTR again.
i. Record exact time of pressing ENTR in h above.
j. Record ROW 1, ROW 2, and ROW 3 indications.
k. If KEY REL indicator on DSKY flashes press KEY REL pushbutton.
l. Observe
VERB 06 NOUN 66 Flashing
m. Record ROW 2 indication.

44. Enter VERB 34 into the DSKY and press the ENTR pushbutton.

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

45. Set the G & N Mounting Fixture to a +32.5° tilt angle.

46. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. +00000 ENTR
d. +00000 ENTR
e. +00000 ENTR

47. Calculate coefficient terms BD, ADSRA, ADIA, ΔSF(A), and A_B. Record results.

48. Calculate coefficient stability terms D_1, D_2, and D_3 for each coefficient and record results as the initial values. (A total of four coefficient values are required in order to calculate a D_3 term.) If all stability term values are within the maximums given, record the results as the final values and proceed to the next step. If any stability term value exceeds the maximum given, retest the IMU by performing the retest sequence given in steps 50 through 55.

---

49. Upon completion of data sheet, make a copy of data sheet and forward immediately to:

Inertial Subsystem Development
Div. #63
Instrumentation Laboratory
75 Cambridge Parkway
Cambridge, Mass. 02042

RETEST SEQUENCE

NOTE: 1. The following steps are to be performed only if the stability values calculated in step 48 exceed maximum values on the initial run.

2. When prior engineering approval is obtained, a partial retest sequence may be performed which will repeat only those steps associated with the coefficient stability values that exceed the maximums. In this event the engineering approval should be shown in Table 6 and a copy of Table 6 attached to the completed data sheets.

50. Repeat steps 1 through 47 or, if engineering approval has veen obtained for a partial retest sequence, repeat the steps specified in Table 6 for the coefficient that exceeded stability value maximums. Record results on data sheet spaces provided.

51. Perform JDC 12204 to downmode system to ISS Standby.

52. Perform JDC 12204 to advance system to ISS Operate.

53. Repeat steps 1 through 47 or, if a partial retest sequence is being performed, repeat the steps specified in Table 6.

54. Calculate coefficient stability terms D_1, D_2, and D_3 for each coefficient and record results as the final values.

55. Return to step 49.

JOB IMU PERFORMANCE TEST

JDC 12217 **REV.** M **PAGE** 1 **OF** 8

INITIAL TDRR 29882 **D.S. PGS** 43

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION The three IRIG coefficient terms, BD, ADSRA, and ADIA, are determined and the scale factor and bias terms are determined for each PIPA, the test is computer controlled and requires six IMU positions to determine all parameters.

REFERENCES PS 2015000

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Fill in Table 5. Record most recent historical values (up to three values) and test dates for coefficient terms BD, ADSRA, ADIA, ΔSF (A) and A_B from IRIG Inspection and Acceptance Data (last retest average value), ISS testing, prior runs of this JDC, or prior spacecraft testing.

2. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not initialize a test position if less than 90 minutes remain before time of overflow.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the Dual Beam Oscilloscope by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

	SIGNAL	CROSSBAR CONTROL
a.	X PIPA G/S output	251
b.	Y PIPA G/S output	152
c.	Z PIPA G/S output	252

VERIFICATION WITH SIDL REQUIRED BEFORE USE

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE.

5. Adjust the VOLTAGE ratio transformer on the Current Source Monitor panel to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

IMU PERFORMANCE TEST ENTRY

12. Set the PIP and IRIG S. F. MONITOR switch to OFF and perform the following DSKY operations:

VERB 57	ENTR
00001	ENTR

13. When VERB 06 and NOUN 61 flash, insure that ROW 1 indicates +180.00 and that ROW 2 indicates the latitude of the site where this test is being performed (see Table 3). If ROW 1 and ROW 2 are correct, enter VERB 33 and press ENTR pushbutton then proceed to step 15. If ROW 1 and/or ROW 2 are incorrect, proceed to step 14.

Test Site	Latitude
MIT	+42.366
AC	+42.902
GAEC	+40.748
MSC	+29.556
MILA	+28.516
NAA	+33.921

Table 3

14. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+18000	ENTR

To correct ROW 2 -

VERB 22	ENTR
Test site latitude from Table 3	ENTR

Enter VERB 33 and press ENTR pushbutton.

INITIALIZE TEST POSITION 1

15. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00001. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 17. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 16.

16. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+00900	ENTR

To correct ROW 2 -

VERB 22	ENTR
+00000	ENTR

To correct ROW 3 -

VERB 23	ENTR
+00001	ENTR

+BDY TEST

17. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+X PIPA S. F. TEST

18. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 2

19. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00002. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 21. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 20.

20. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+00900	ENTR

To correct ROW 2 -

VERB 22	ENTR
+00000	ENTR

To correct ROW 3 -

VERB 23	ENTR
+00002	ENTR

+BDZ TEST

21. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-X PIPA S. F. TEST

22. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

22A. Perform the following DSKY operations:

a.	VERB 21	NOUN 01	ENTR
b.	00407		ENTR
c.	77757		ENTR
d.	VERB 21	NOUN 01	ENTR
e.	00411		ENTR
f.	00020		ENTR

-BDX + ADIAX TEST

23. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

23A. Perform the following DSKY operations:

a.	VERB 06	NOUN 03	ENTR
b.	02530		ENTR
c.	Record ROW 1 indication.		
d.			ENTR
e.	02531		ENTR
f.	Record ROW 1 indication.		

INITIALIZE TEST POSITION 3

24. Enter VERB 33 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00003. If ROW 1, ROW 2, and ROW 3 are correct, proceed to step 26. If ROW 1, ROW 2, and/or ROW 3 are incorrect, proceed to step 25.

25. Perform the following DSKY operations:

To correct ROW 1 -

VERB 21	ENTR
+00900	ENTR

To correct ROW 2 -

VERB 22	ENTR
+00000	ENTR

To correct ROW 3 -
VERB 23 ENTR
+00003 ENTR

-BDX TEST

26. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Z PIPA S.F. TEST

27. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 4

28. Enter VERB 34 and press ENTR pushbutton on the DSKY. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00000, and ROW 3 indicates +00004. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 30. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 29.

29. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00000 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00004 ENTR

+BDY + ADSRAY TEST

30. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-Z PIPA S.F. TEST

31. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

31A. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 00405 ENTR
c. 00020 ENTR
d. VERB 21 NOUN 01 ENTR
e. 00407 ENTR
f. 77757 ENTR

+BDZ + ADIAZ TEST

32. Enter VERB 33 and press ENTR pushbutton on the DSKY. In approximately 67 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

32A. Perform the following DSKY operations:

a. VERB 06 NOUN 03 ENTR
b. 02530 ENTR
c. Record ROW 1 indication.
d. ENTR
e. 02531 ENTR
f. Record ROW 1 indication.

INITIALIZE TEST POSITION 5

33. Enter VERB 33 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00005. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 35. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 34.

34. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00037 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00005 ENTR

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

35. Tilt the G & N Mounting Fixture to the 0.0° position.

+BDZ - ADSRAZ

36. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

+Y PIPA TEST

37. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

INITIALIZE TEST POSITION 6

38. Enter VERB 34 into DSKY and press ENTR pushbutton. When VERB 06 and NOUN 66 flash, insure that ROW 1 indicates +00900, ROW 2 indicates +00037, and ROW 3 indicates +00006. If ROW 1, ROW 2, and ROW 3 indications are correct, proceed to step 40. If ROW 1, ROW 2, and/or ROW 3 indications are incorrect, proceed to step 39.

39. Perform the following DSKY operations:

To correct ROW 1 -
VERB 21 ENTR
+00900 ENTR
To correct ROW 2 -
VERB 22 ENTR
+00037 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00006 ENTR

+BDX + ADSRAX TEST

40. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-BDY + ADIAY

41. Calculate -BDZ - ADSRAZ as shown on data sheet.

-Y PIPA S.F. TEST

42. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

42A. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 00405 ENTR
c. 77757 ENTR
d. VERB 21 NOUN 01 ENTR
e. 00411 ENTR
f. 00020 ENTR

NOTE: Read and understand step 43 before proceeding.

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. VERB 21 NOUN 01 ENTR
c. 02637 ENTR
d. Enter the calculated value of -BDZ -ADSRAZ into the DSKY as ±XXX.XX and press the ENTR pushbutton.
e. VERB 06 NOUN 20 ENTR
f. Record exact time of pressing ENTR in e above.
g. Record ROW 1, ROW 2, and ROW 3 indications.
h. One hour after pressing ENTR in e above, press ENTR again.
i. Record exact time of pressing ENTR in h above.
j. Record ROW 1, ROW 2, and ROW 3 indications.
k. If KEY REL indicator on DSKY flashes press KEY REL pushbutton.
l. Observe
VERB 06 NOUN 66 Flashing
m. Record ROW 2 indication.

44. Enter VERB 34 into the DSKY and press the ENTR pushbutton.

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

45. Set the G & N Mounting Fixture to a +32.5° tilt angle.

46. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. +00000 ENTR
d. +00000 ENTR
e. +00000 ENTR

47. Calculate coefficient terms BD, ADSRA, ADIA, ΔSF(A), and A_B. Record results.

48. Calculate coefficient stability terms D_1, D_2, and D_3 for each coefficient and record results as the initial values. (A total of four coefficient values are required in order to calculate a D_3 term.) If all stability term values are within the maximums given, record the results as the final values and proceed to the next step. If any stability term value exceeds the maximum given, retest the IMU by performing the retest sequence given in steps 50 through 55.

---

49. Upon completion of data sheet, make a copy of data sheet and forward immediately to:

Inertial Subsystem Development
Div. #63
Instrumentation Laboratory
75 Cambridge Parkway
Cambridge, Mass. 02042

RETEST SEQUENCE

NOTE: 1. The following steps are to be performed only if the stability values calculated in step 48 exceed maximum values on the initial run.

2. When prior engineering approval is obtained, a partial retest sequence may be performed which will repeat only those steps associated with the coefficient stability values that exceed the maximums. In this event the engineering approval should be shown in Table 6 and a copy of Table 6 attached to the completed data sheets.

50. Repeat steps 1 through 47 or, if engineering approval has been obtained for a partial retest sequence, repeat the steps and calculate the parameters specified in Table 6 for the coefficient that exceeded stability value maximums. Record results on data sheet spaces provided.

51. Perform JDC 12204 to downmode system to ISS Standby.

52. Perform JDC 12204 to advance system to ISS Operate.

53. Repeat steps 1 through 47 or, if a partial retest sequence is being performed, repeat the steps and calculate the parameters specified in Table 6.

54. Calculate coefficient stability terms D_1, D_2, and D_3 for each coefficient and record results as the final values.

55. Return to step 49.

JOB IMU PERFORMANCE TEST | JDC 12217 REV. N PAGE 1 OF 8
INITIAL TDRR 29882 D.S. PGS 43

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION The three IRIG coefficient terms, BD, ADSRA, and ADIA, are determined and the scale factor and bias terms are determined for each PIPA, the test is computer controlled and requires six IMU positions to determine all parameters.

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Fill in Table 5. Record most recent historical values (up to three values) and test dates for coefficient terms BD, ADSRA, ADIA, ΔSF (A) and A_B from IRIG Inspection and Acceptance Data (last retest average value), ISS testing, prior runs of this JDC, or prior spacecraft testing.

2. Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not initialize a test position if less than 90 minutes remain before time of overflow.

3. In some steps the DSKY data entries required when the CMC contains Computer Program Assembly 2021104-061 are different from the DSKY data entries required when the CMC contains Computer Program Assembly 2021104-031, -041, or -051. These differences are noted within the procedures.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the Dual Beam Oscilloscope by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

SIGNAL	CROSSBAR CONTROL
a. X PIPA G/S output	251
b. Y PIPA G/S output	152
c. Z PIPA G/S output	252

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEASURE

5. Adjust the VOLTAGE ratio transformer on the Current Source Monitor panel to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current

Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting

To correct ROW 2 -
VERB 22 ENTR
+00037 ENTR
To correct ROW 3 -
VERB 23 ENTR
+00006 ENTR

+BDX + ADSRAX TEST

40. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 17 minutes, VERB 06 and NOUN 66 will flash. Record ROW 2 indication.

-BDY + ADIAY

41. Calculate -BDZ - ADSRAZ as shown on data sheet.

-Y PIPA S. F. TEST

42. Enter VERB 33 into DSKY and press ENTR pushbutton. In approximately 90 seconds, VERB 06 and NOUN 66 will flash. Record ROW 1 and ROW 2 indications.

NOTE: The entries shown in parentheses apply to Computer Program Assembly 2021104-061.

42A. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 00405 (02500) ENTR
c. 77757 ENTR
d. VERB 21 NOUN 01 ENTR
e. 00411 (02504) ENTR
f. 00020 ENTR

NOTE: Read and understand step 43 before proceeding.

43. Perform the following DSKY operations:

a. VERB 33 ENTR
b. VERB 21 NOUN 01 ENTR
c. 02637 ENTR
d. Enter the calculated value of -BDZ -ADSRAZ into the DSKY as ±XXX.XX and press the ENTR pushbutton.
e. VERB 06 NOUN 20 ENTR
f. Record exact time of pressing ENTR in e above.
g. Record ROW 1, ROW 2, and ROW 3 indications.
h. One hour after pressing ENTR in e above, press ENTR again.
i. Record exact time of pressing ENTR in h above.
j. Record ROW 1, ROW 2, and ROW 3 indications.
k. If KEY REL indicator on DSKY flashes press KEY REL pushbutton.
l. Observe
VERB 06 NOUN 66 Flashing
m. Record ROW 2 indication.

44. Enter VERB 34 into the DSKY and press the ENTR pushbutton.

NOTE: Insure undue strains are not placed on the hoses or cables during the following operation.

45. Set the G & N Mounting Fixture to a +32.5° tilt angle.

---

46. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. +00000 ENTR
d. +00000 ENTR
e. +00000 ENTR

47. Calculate coefficient terms BD, ADSRA, ADIA, ΔSF(A), and A_B. Record results.

48. Calculate coefficient stability terms D_1, D_2, and D_3 for each coefficient and record results as the initial values. (A total of four coefficient values are required in order to calculate a D_3 term.) If all stability term values are within the maximums given, record the results as the final values and proceed to the next step. If any stability term value exceeds the maximum given, retest the IMU by performing the retest sequence given in steps 50 through 55.

49. Upon completion of data sheet, make a copy of data sheet and forward immediately to:

Inertial Subsystem Development
Div. #63
Instrumentation Laboratory
75 Cambridge Parkway
Cambridge, Mass. 02042

RETEST SEQUENCE

NOTE: 1. The following steps are to be performed only if the stability values calculated in step 48 exceed maximum values on the initial run.

2. When prior engineering approval is obtained, a partial retest sequence may be performed which will repeat only those steps associated with the coefficient stability values that exceed the maximums. In this event the engineering approval should be shown in Table 6 and a copy of Table 6 attached to the completed data sheets.

50. Repeat steps 1 through 47 or, if engineering approval has been obtained for a partial retest sequence, repeat the steps and calculate the parameters specified in Table 6 for the coefficient that exceeded stability value maximums. Record results on data sheet spaces provided.

51. Perform JDC 12204 to downmode system to ISS Standby.

52. Perform JDC 12204 to advance system to ISS Operate.

53. Repeat steps 1 through 47 or, if a partial retest sequence is being performed, repeat the steps and calculate the parameters specified in Table 6.

54. Calculate coefficient stability terms D_1, D_2, and D_3 for each coefficient and record results as the final values.

55. Return to step 49.

JOB IMU PERFORMANCE TEST

JDC 12217 REV. - PAGE 1 OF 6
INITIAL TDRR 29882 D.S. PGS 9

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION The three IRIG coefficient terms, NBD, ADSRA, and ADIA, are determined and the scale factor and bias terms are determined for each PIPA, the test is computer controlled and requires six IMU positions to determine all parameters.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL	
			JDC	D.S.	MIT	NASA

REFERENCES PS 2015000

IMPORTANT Fill in Table 5 before proceeding with this JDC.

INTERVAL

TOOLS AND MATERIAL

INITIALIZATION

1. Establish a Master Initialization condition. Insure that the G & N Mounting Fixture is set to +32.5°, that the IMU operate power and CGC power has been applied for a minimum of one hour and that the IMU is not in a gimbal lock position. Record gyro WHEEL time.

PIPA TLM INTERFACE TEST

2. Measure and record the following signals on the DVM by setting the CROSSBAR CONTROL on the Primary Signal Selector panel to positions indicated:

SIGNAL	CROSSBAR CONTROL
a. X PIPA G/S output	251
b. Y PIPA G/S output	152
c. Z PIPA G/S output	252

X, Y AND Z PIPA PVR MEASUREMENTS

3. Set the RANGE switch on the Galvanometer to 1 VOLT.

4. Set the VOLTAGE RANGE selector on the Current Source Monitor panel to TEMP READ and the SELECTOR switch to MEAS-

5. Adjust the VOLTAGE ratio transformer on the Galvanometer to obtain a minimum null on the meter. Insure the VOLTAGE ratio transformer indicates 50000 (±01250) before proceeding. Set the RANGE switch to 1 VOLT.

6. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 1 as follows:

a. Set the SELECTOR switch to ZERO and the VOLTAGE RANGE selector to 5-6.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ____________

JOB IMU PERFORMANCE TEST

JDC 12217 REV - PAGE 2 OF 6

SUBSYSTEM G & N SYSTEM

ASSY

b. Adjust the RANGE switch and ZERO control to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

c. Set the SELECTOR switch to STANDARDIZE.

d. Adjust the RANGE switch and STANDARDIZE potentiometer to obtain a minimum null on the meter. Set the RANGE switch to 1 VOLT.

e. Set the SELECTOR switch to MEASURE and adjust the RANGE switch and VOLTAGE ratio transformer to obtain a minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

NOTE: If a null cannot be obtained with the VOLTAGE RANGE selector set to 5-6, set the selector to 6-7 and repeat steps c through e.

f. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting
1	X PIPA PVR	1
2	Y PIPA PVR	4
3	Z PIPA PVR	7

Table 1

X, Y AND Z PIPA TCM MEASUREMENTS

7. Set the SELECTOR switch on the Current Source Monitor panel to ZERO and the VOLTAGE RANGE switch to 1.0 - 1.1.

8. Adjust the RANGE switch and ZERO control on the Galvanometer to obtain minimum null on meter. Set the RANGE switch to 1 VOLT.

9. Set the SELECTOR switch on Current Source Monitor panel to STANDARDIZE.

10. Adjust the RANGE switch and STANDARDIZE pot to obtain a minimum null. Set the RANGE switch to 1 VOLT.

11. Measure the ratio transformer indication for each of the PTA/PEA TEST POINT ADAPTER switch settings specified in Table 2 as follows:

a. Set the SELECTOR switch on the Current Source Monitor panel to MEASURE and adjust RANGE switch and VOLTAGE ratio transformer to obtain minimum null on the meter with a final RANGE switch setting of .3 MILLIVOLTS.

b. Set RANGE switch to 1 VOLT. Record VOLTAGE ratio transformer indication.

c. Set the PIP AND IRIG S. F. MONITOR switch to OFF.

Item	Signal	PTA/PEA PIP AND IRIG S. F. MONITOR Switch Setting

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION: This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars.) The SXT measures star angles with respect to the Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment. The X and Z Stable Member axis are in turn aligned to local vertical.

INITIALIZATION

1. Establish a Master Initialization condition.

2. Make the following switch settings on the Indicator Control panel:

a. OPTICS MODE to ZERO

b. OPTICS SPEED to LO

c. OPTICS COUPLING TO DIRECT

d. OPTICS TRACKER to OFF

e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

TEST ENTRY

3. Perform the following DSKY operations:

a. VERB 57 ENTR

b. 00003 ENTR

4. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +135.00

VERIFICATION WITH SIDL REQUIRED BEFORE USE

SUBSYSTEM G & N SYSTEM | ASSY

b. Row 2 displays +XX.XXX (Test site latitude from Table 1).

If the displays are correct, proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations:

To change only Row 1

a. VERB 21 ENTR

b. +13500 ENTR

To change only Row 2

c. VERB 22 ENTR

d. SITE LATITUDE ENTR

TEST POSITION 1 ENTRY

6. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
VERB 21 NOUN 30 Flashing

c. +00001 ENTR

d. Observe
VERB 22 NOUN 30 Flashing

e. +00000 ENTR

f. Observe
VERB 23 NOUN 30 Flashing

g. +00001 ENTR

Y_{NB} AZIMUTH AND ELEVATION

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +27000

b. Row 2 displays +00000

c. Row 3 displays 00001

8. If the displays are correct, proceed to step 10, if not proceed to step 9.

9. Perform the following DSKY operations:

To change only Row 1

a. VERB 21 ENTR

b. +27000 ENTR

To change only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00001.

10. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z_{NB} AZIMUTH AND ELEVATION

11. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +18000

b. Row 2 displays +00000

c. Row 3 displays 00002

If the displays are correct, proceed to step 13, if not proceed to step 12.

12. Perform the following DSKY operations:

To change only Row 1

a. VERB 21 ENTR

b. +18000 ENTR

To change only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00002.

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 1 DATA INSERTION

14. When VERB 06 and NOUN 61 commence

SUBSYSTEM G & N SYSTEM | ASSY

flashing, insure that the DSKY displays the following:

a. Row 1 displays +18000

b. Row 2 displays +00000

c. Row 3 displays 00001

If the displays are correct, proceed to step 16, if not proceed to step 15.

15. Perform the following DSKY operations: To correct only Row 1

a. VERB 21 ENTR

b. +18000 ENTR

To correct only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00001

16. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 2 DATA INSERTION

17. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500

b. Row 2 displays +00000

c. Row 3 displays 00002

If the displays are correct, proceed to step 19, if not proceed to step 18.

18. Perform the following DSKY operations: To correct only Row 1

a. VERB 21 ENTR

b. +13500 ENTR

To correct only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00002.

19. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

COARSE MARK STAR 1

20. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

21. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 22, if not press the MARK REJECT and repeat this step.

COARSE MARK STAR 2

22. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to target #4

SUBSYSTEM G & N SYSTEM | ASSY

location. Wait until the optics stop driving before proceeding.

23. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 24, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

24. The Stable Member will be coarse aligned to the desired test position. In approximately 90 seconds VERB 51 and NOUN 30 shall commence flashing. Set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

25. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press ENTR and proceed to step 26, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

26. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #4 location. Wait until the optics stops driving before proceeding.

27. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 28, if not press MARK REJECT and repeat this step.

Y PIPA ABOUT Z MISALIGNMENT

28. In approximately 10 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

29. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT Y MISALIGNMENT

30. When VERB 06 and NOUN 66 commence flashing. Row 1 and Row 2 shall contain the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

31. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 2

32. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

33. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

34. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 2 ENTRY

35. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00002 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00001 ENTR

36. Repeat steps 7 through 27.

X PIPA ABOUT Y MISALIGNMENT

37. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

38. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Y PIPA ABOUT X MISALIGNMENT

39. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

40. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 3

41. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 15 seconds then set the OPTICS MODE switch to MAN.

42. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. +00000 ENTR
c. +00000 ENTR
d. +00000 ENTR

43. Set the G & N Mounting Fixture Tilt Axis to 0°. Take care not to strain or break hoses or cables.

44. Using the Optics Hand Controller, drive the SXT shaft to -90° as indicated on the T PAK shaft readout. (Set the CONTROLLER SPEED switch to HI and LO as required.) (0° Trunnion)

45. Adjust the G & N Mounting Fixture Tilt Axis until the SXT control horizontal reticle line is centered on the horizontal reticle line of target #1.

46. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

---

47. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 3 ENTRY

48. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00003 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00000 ENTR

49. Repeat steps 14 through 19.

COARSE MARK STAR 1

50. Set the CONTROLLER SPEED switch set to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 51, if not press MARK REJECT and repeat this step.

COARSE MARK STAR #2

51. Set the OPTICS MODE switch to MANUAL and the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

52. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central verticle reticle line is centered on the horizontal reticle line and dot of target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 53, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

53. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 00.0° respectively.

54. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 55, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

55. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

56. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of Target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 57. If not press MARK REJECT and repeat this step.

X PIPA ABOUT Z MISALIGNMENT

57. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

58. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT X MISALIGNMENT

59. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

TEST TERMINATION

60. Perform the following DSKY operations:

a. VERB 34 ENTR
b. The PROG display shall indicate 00
c. VERB 41 NOUN 20 ENTR
d. +00000 ENTR
e. +00000 ENTR
f. +00000 ENTR

61. Set the G & N Mounting Fixture Tilt axis to 32.5°. Take care not to strain or break the hoses or cables.

62. Perform the calculations on the calculation sheet and complete the data sheets.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION: This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars.) The SXT measures star angles with respect to the Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment. The X and Z Stable Member axis are in turn aligned to local vertical.

INITIALIZATION

1. Establish a Master Initialization condition.

2. Make the following switch settings on the Indicator Control panel:

a. OPTICS MODE to ZERO

b. OPTICS SPEED to LO

c. OPTICS COUPLING TO DIRECT

d. OPTICS TRACKER to OFF

e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

TEST ENTRY

3. Perform the following DSKY operations:

a. VERB 57 ENTR

b. 00003 ENTR

4. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +135.00

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

b. Row 2 displays +XX.XXX (Test site latitude from Table 1).

If the displays are correct, proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations:

To change only Row 1

a. VERB 21 ENTR

b. +13500 ENTR

To change only Row 2

c. VERB 22 ENTR

d. SITE LATITUDE ENTR

TEST POSITION 1 ENTRY

6. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe

VERB 21 NOUN 30 Flashing

c. +00001 ENTR

d. Observe

VERB 22 NOUN 30 Flashing

e. +00000 ENTR

f. Observe

VERB 23 NOUN 30 Flashing

g. +00001 ENTR

Y_{NB} AZIMUTH AND ELEVATION

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +27000

b. Row 2 displays +00000

c. Row 3 displays 00001

8. If the displays are correct, proceed to step 10, if not proceed to step 9.

9. Perform the following DSKY operations:

To change only Row 1

a. VERB 21 ENTR

b. +27000 ENTR

To change only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00001.

10. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z_{NB} AZIMUTH AND ELEVATION

11. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +18000

b. Row 2 displays +00000

c. Row 3 displays 00002

If the displays are correct, proceed to step 13, if not proceed to step 12.

12. Perform the following DSKY operations:

To change only Row 1

a. VERB 21 ENTR

b. +18000 ENTR

To change only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00002.

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 1 DATA INSERTION

14. When VERB 06 and NOUN 61 commence

---

flashing, insure that the DSKY displays the following:

a. Row 1 displays +18000

b. Row 2 displays +00000

c. Row 3 displays 00001

If the displays are correct, proceed to step 16, if not proceed to step 15.

15. Perform the following DSKY operations: To correct only Row 1

a. VERB 21 ENTR

b. +18000 ENTR

To correct only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00001

16. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 2 DATA INSERTION

17. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500

b. Row 2 displays +00000

c. Row 3 displays 00002

If the displays are correct, proceed to step 19, if not proceed to step 18.

18. Perform the following DSKY operations: To correct only Row 1

a. VERB 21 ENTR

b. + 13500 ENTR

To correct only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00002.

19. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

COARSE MARK STAR 1

20. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

21. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 22, if not press the MARK REJECT and repeat this step.

COARSE MARK STAR 2

22. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to target #4

---

location. Wait until the optics stop driving before proceeding.

23. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 24, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

24. The Stable Member will be coarse aligned to the desired test position. In approximately 90 seconds VERB 51 and NOUN 30 shall commence flashing. Set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

25. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press ENTR and proceed to step 26, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

26. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #4 location. Wait until the optics stops driving before proceeding.

27. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 28, if not press MARK REJECT and repeat this step.

Y PIPA ABOUT Z MISALIGNMENT

28. In approximately 10 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

29. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT Y MISALIGNMENT

30. When VERB 06 and NOUN 66 commence flashing. Row 1 and Row 2 shall contain the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

31. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 2

32. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

33. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

34. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 2 ENTRY

35. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00002 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00001 ENTR

36. Repeat steps 7 through 27.

X PIPA ABOUT Y MISALIGNMENT

37. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

38. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Y PIPA ABOUT X MISALIGNMENT

39. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

40. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 3

41. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 15 seconds then set the OPTICS MODE switch to MAN.

42. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. +00000 ENTR
c. +00000 ENTR
d. +00000 ENTR

43. Set the G & N Mounting Fixture Tilt Axis to 0°. Take care not to strain or break hoses or cables.

44. Using the Optics Hand Controller, drive the SXT shaft to -90° as indicated on the T PAK shaft readout. (Set the CONTROLLER SPEED switch to HI and LO as required.) (0° Trunnion)

45. Adjust the G & N Mounting Fixture Tilt Axis until the SXT control horizontal reticle line is centered on the horizontal reticle line of target #1.

46. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

47. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 3 ENTRY

48. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00003 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00000 ENTR

49. Repeat steps 14 through 19.

COARSE MARK STAR 1

50. Set the CONTROLLER SPEED switch set to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 51, if not press MARK REJECT and repeat this step.

COARSE MARK STAR #2

51. Set the OPTICS MODE switch to MANUAL and the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

52. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central verticle reticle line is centered on the horizontal reticle line and dot of target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 53, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

53. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 00.0° respectively.

54. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 55, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

55. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

56. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of Target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 57. If not press MARK REJECT and repeat this step.

X PIPA ABOUT Z MISALIGNMENT

57. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

58. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT X MISALIGNMENT

59. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

TEST TERMINATION

60. Perform the following DSKY operations:

a. VERB 34 ENTR
b. The PROG display shall indicate 00
c. VERB 41 NOUN 20 ENTR
d. +00000 ENTR
e. +00000 ENTR
f. +00000 ENTR

61. Set the G & N Mounting Fixture Tilt axis to 32.5°. Take care not to strain or break the hoses or cables.

62. Perform the calculations on the calculation sheet and complete the data sheets.

REFERENCES

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA Misalignment Test within 0.2 hours of that time.

DESCRIPTION: This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars.) The SXT measures star angles with respect to the Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment. The X and Z Stable Member axis are in turn aligned to local vertical.

INITIALIZATION

1. Establish a Master Initialization condition.

2. Make the following switch settings on the Indicator Control panel;

a. OPTICS MODE to ZERO
b. OPTICS SPEED to LO
c. OPTICS COUPLING TO DIRECT
d. OPTICS TRACKER to OFF
e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

TEST ENTRY

3. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

4. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +135.00

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

b. Row 2 displays +XX.XXX (Test site latitude from Table 1).

If the displays are correct, proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations:

To change only Row 1

a. VERB 21 ENTR
b. +13500 ENTR

To change only Row 2

c. VERB 22 ENTR
d. SITE LATITUDE ENTR

TEST POSITION 1 ENTRY

6. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00001 ENTR
d. Observe
VERB 22 NOUN 30. Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00001 ENTR

Y_{NB} AZIMUTH AND ELEVATION

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +27000
b. Row 2 displays +00000
c. Row 3 displays 00001

8. If the displays are correct, proceed to step 10, if not proceed to step 9.

9. Perform the following DSKY operations:

To change only Row 1

a. VERB 21 ENTR
b. +27000 ENTR

To change only Row 2

c. VERB 22 ENTR
d. +00000 ENTR

Row 3 shall indicate 00001.

10. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z_{NB} AZIMUTH AND ELEVATION

11. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +18000
b. Row 2 displays +00000
c. Row 3 displays 00002

If the displays are correct, proceed to step 13, if not proceed to step 12.

12. Perform the following DSKY operations:

To change only Row 1

a. VERB 21 ENTR
b. +18000 ENTR

To change only Row 2

c. VERB 22 ENTR
d. +00000 ENTR

Row 3 shall indicate 00002.

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 1 DATA INSERTION

14. When VERB 06 and NOUN 61 commence

---

flashing, insure that the DSKY displays the following:

a. Row 1 displays +18000
b. Row 2 displays +00000
c. Row 3 displays 00001

If the displays are correct, proceed to step 16, if not proceed to step 15.

15. Perform the following DSKY operations: To correct only Row 1

a. VERB 21 ENTR
b. +18000 ENTR

To correct only Row 2

c. VERB 22 ENTR
d. +00000 ENTR

Row 3 shall indicate 00001

16. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 2 DATA INSERTION

17. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +00000
c. Row 3 displays 00002

If the displays are correct, proceed to step 19, if not proceed to step 18.

18. Perform the following DSKY operations: To correct only Row 1

a. VERB 21 ENTR
b. +13500 ENTR

To correct only Row 2

c. VERB 22 ENTR
d. +00000 ENTR

Row 3 shall indicate 00002.

19. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

COARSE MARK STAR 1

20. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

21. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 22, if not press the MARK REJECT and repeat this step.

COARSE MARK STAR 2

22. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to target #4

---

location. Wait until the optics stop driving before proceeding.

23. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 24, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

24. The Stable Member will be coarse aligned to the desired test position. In approximately 90 seconds VERB 51 and NOUN 30 shall commence flashing. Set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

25. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press ENTR and proceed to step 26, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

26. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #4 location. Wait until the optics stops driving before proceeding.

27. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 28, if not press MARK REJECT and repeat this step.

Y PIPA ABOUT Z MISALIGNMENT

28. In approximately 10 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

29. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT Y MISALIGNMENT

30. When VERB 06 and NOUN 66 commence flashing. Row 1 and Row 2 shall contain the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

31. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 2

32. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

33. Perform the following DSKY operations:

a. VERB 57		ENTR
b. 00003		ENTR

34. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 2 ENTRY

35. Perform the following DSKY operations:

a. VERB 33		ENTR
b. Observe		
VERB 21	NOUN 30	Flashing
c. +00002		ENTR
d. Observe		
VERB 22	NOUN 30	Flashing
e. +00000		ENTR
f. Observe		
VERB 23	NOUN 30	Flashing
g. +00001		ENTR

36. Repeat steps 7 through 27.

X PIPA ABOUT Y MISALIGNMENT

37. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

38. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Y PIPA ABOUT X MISALIGNMENT

39. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

40. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 3

41. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 15 seconds then set the OPTICS MODE switch to MAN.

42. Perform the following DSKY operations:

a. VERB 41	NOUN 20	ENTR
b. +00000		ENTR
c. +00000		ENTR
d. +00000		ENTR

43. Set the G & N Mounting Fixture Tilt Axis to 0°. Take care not to strain or break hoses or cables.

44. Using the Optics Hand Controller, drive the SXT shaft to -90° as indicated on the T PAK shaft readout. (Set the CONTROLLER SPEED switch to HI and LO as required.) (0° Trunnion)

45. Adjust the G & N Mounting Fixture Tilt Axis until the SXT control horizontal reticle line is centered on the horizontal reticle line of target #1.

46. Perform the following DSKY operations:

a. VERB 57	ENTR
b. 00003	ENTR

---

47. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 3 ENTRY

48. Perform the following DSKY operations:

a. VERB 33		ENTR
b. Observe		
VERB 21	NOUN 30	Flashing
c. +00003		ENTR
d. Observe		
VERB 22	NOUN 30	Flashing
e. +00000		ENTR
f. Observe		
VERB 23	NOUN 30	Flashing
g. +00000		ENTR

49. Repeat steps 14 through 19.

COARSE MARK STAR 1

50. Set the CONTROLLER SPEED switch set to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 51, if not press MARK REJECT and repeat this step.

COARSE MARK STAR #2

51. Set the OPTICS MODE switch to MANUAL and the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

52. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central verticle reticle line is centered on the horizontal reticle line and dot of target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 53, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

53. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 00.0° respectively.

54. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 55, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

55. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics

---

until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

56. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of Target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 57. If not press MARK REJECT and repeat this step.

X PIPA ABOUT Z MISALIGNMENT

57. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

58. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT X MISALIGNMENT

59. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

TEST TERMINATION

60. Perform the following DSKY operations:

a. VERB 34		ENTR
b. The PROG display shall indicate 00		
c. VERB 41	NOUN 20	ENTR
d. +00000		ENTR
e. +00000		ENTR
f. +00000		ENTR

61. Set the G & N Mounting Fixture Tilt axis to 32.5°. Take care not to strain or break the hoses or cables.

62. Perform the calculations on the calculation sheet and complete the data sheets.

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: Obtain the time of day of high order scaler overflow from JDC 12204. To prevent erroneous test results, do not enter a PIPA Misalignment Test within 0.2 hours of that time.

DESCRIPTION: This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars.) The SXT measures star angles with respect to the Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment. The X and Z Stable Member axis are in turn aligned to local vertical.

INITIALIZATION

1. Establish a Master Initialization condition and press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Make the following switch settings on the Indicator Control panel:

- a. OPTICS MODE to ZERO
- b. OPTICS SPEED to LO
- c. OPTICS COUPLING TO DIRECT
- d. OPTICS TRACKER to OFF
- e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

TEST ENTRY

3. Perform the following DSKY operations:

a. VERB 57	ENTR
b. 00003	ENTR

4. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +135.00

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N FINE ALIGN TEST

ASSY

b. Row 2 displays +XX.XXX (Test site latitude from Table 1).

If the displays are correct, proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations:

To change only Row 1

a. VERB 21	ENTR
b. +13500	ENTR

To change only Row 2

c. VERB 22	ENTR
d. SITE LATITUDE	ENTR

TEST POSITION 1 ENTRY

6. Perform the following DSKY operations:

a. VERB 33		ENTR
b. Observe		
VERB 21	NOUN 30	Flashing
c. +00001		ENTR
d. Observe		
VERB 22	NOUN 30	Flashing
e. +00000		ENTR
f. Observe		
VERB 23	NOUN 30	Flashing
g. +00001		ENTR

Y_{NB} AZIMUTH AND ELEVATION

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

- a. Row 1 displays +27000
- b. Row 2 displays +00000
- c. Row 3 displays 00001

8. If the displays are correct, proceed to step 10, if not proceed to step 9.

9. Perform the following DSKY operations:

To change only Row 1

a. VERB 21	ENTR
b. +27000	ENTR

To change only Row 2

c. VERB 22	ENTR
d. +00000	ENTR

Row 3 shall indicate 00001.

10. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z_{NB} AZIMUTH AND ELEVATION

11. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

- a. Row 1 displays +18000
- b. Row 2 displays +00000
- c. Row 3 displays 00002

If the displays are correct, proceed to step 13, if not proceed to step 12.

12. Perform the following DSKY operations:

To change only Row 1

a. VERB 21	ENTR
b. +18000	ENTR

To change only Row 2

c. VERB 22	ENTR
d. +00000	ENTR

Row 3 shall indicate 00002.

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 1 DATA INSERTION

14. When VERB 06 and NOUN 61 commence

DATE 30 JUN 66

JOB G & N FINE ALIGN TEST

JDC 12218 REV D PAGE 3 OF 7

SUBSYSTEM G & N SYSTEM

ASSY

flashing, insure that the DSKY displays the following:

- a. Row 1 displays +18000
- b. Row 2 displays +00000
- c. Row 3 displays 00001

If the displays are correct, proceed to step 16, if not proceed to step 15.

15. Perform the following DSKY operations: To correct only Row 1

a. VERB 21	ENTR
b. +18000	ENTR

To correct only Row 2

c. VERB 22	ENTR
d. +00000	ENTR

Row 3 shall indicate 00001

16. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 2 DATA INSERTION

17. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

- a. Row 1 displays +13500
- b. Row 2 displays +00000
- c. Row 3 displays 00002

If the displays are correct, proceed to step 19, if not proceed to step 18.

18. Perform the following DSKY operations: To correct only Row 1

a. VERB 21	ENTR
b. +13500	ENTR

To correct only Row 2

c. VERB 22	ENTR
d. +00000	ENTR

Row 3 shall indicate 00002.

19. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

COARSE MARK STAR 1

20. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

21. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 22, if not press the MARK REJECT and repeat this step.

COARSE MARK STAR 2

22. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to target #4

DATE 30 JUN 66

ASSY

location. Wait until the optics stop driving before proceeding.

23. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 24, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

24. The Stable Member will be coarse aligned to the desired test position. In approximately 90 seconds VERB 51 and NOUN 30 shall commence flashing. Set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

25. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press ENTR and proceed to step 26, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

26. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #4 location. Wait until the optics stops driving before proceeding.

27. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 28, if not press MARK REJECT and repeat this step.

Y PIPA ABOUT Z MISALIGNMENT

28. In approximately 10 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

29. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT Y MISALIGNMENT

30. When VERB 06 and NOUN 66 commence flashing. Row 1 and Row 2 shall contain the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

31. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

DATE 30 JUN 66

INITIALIZATION POSITION 2

32. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

33. Perform the following DSKY operations:

a. VERB 57		ENTR
b. 00003		ENTR

34. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500

b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 2 ENTRY

35. Perform the following DSKY operations:

a. VERB 33		ENTR
b. Observe		
VERB 21	NOUN 30	Flashing
c. +00002		ENTR
d. Observe		
VERB 22	NOUN 30	Flashing
e. +00000		ENTR
f. Observe		
VERB 23	NOUN 30	Flashing
g. +00001		ENTR

36. Repeat steps 7 through 27.

X PIPA ABOUT Y MISALIGNMENT

37. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

38. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Y PIPA ABOUT X MISALIGNMENT

39. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

40. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 3

41. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 15 seconds then set the OPTICS MODE switch to MAN.

42. Perform the following DSKY operations:

a. VERB 41	NOUN 20	ENTR
b. +00000		ENTR
c. +00000		ENTR
d. +00000		ENTR

43. Set the G & N Mounting Fixture Tilt Axis to 0°. Take care not to strain or break hoses or cables.

44. Using the Optics Hand Controller, drive the SXT shaft to -90° as indicated on the T PAK shaft readout. (Set the CONTROLLER SPEED switch to HI and LO as required.) (0° Trunnion)

45. Adjust the G & N Mounting Fixture Tilt Axis until the SXT control horizontal reticle line is centered on the horizontal reticle line of target #1.

46. Perform the following DSKY operations:

a. VERB 57	ENTR
b. 00003	ENTR

---

47. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500

b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 3 ENTRY

48. Perform the following DSKY operations:

a. VERB 33		ENTR
b. Observe		
VERB 21	NOUN 30	Flashing
c. +00003		ENTR
d. Observe		
VERB 22	NOUN 30	Flashing
e. +00000		ENTR
f. Observe		
VERB 23	NOUN 30	Flashing
g. +00000		ENTR

49. Repeat steps 14 through 19.

COARSE MARK STAR 1

50. Set the CONTROLLER SPEED switch set to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 51, if not press MARK REJECT and repeat this step.

COARSE MARK STAR #2

51. Set the OPTICS MODE switch to MANUAL and the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

52. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central verticle reticle line is centered on the horizontal reticle line and dot of target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 53, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

53. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 00.0° respectively.

54. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 55, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

55. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

---

56. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of Target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 57. If not press MARK REJECT and repeat this step.

X PIPA ABOUT Z MISALIGNMENT

57. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

58. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT X MISALIGNMENT

59. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

TEST TERMINATION

60. Perform the following DSKY operations:

a. VERB 34		ENTR
b. The PROG display shall indicate 00		
c. VERB 41	NOUN 20	ENTR
d. +00000		ENTR
e. +00000		ENTR
f. +00000		ENTR

61. Set the G & N Mounting Fixture Tilt axis to 32.5°. Take care not to strain or break the hoses or cables and press OPTICS POWER ON pushbutton on the Test Control panel so that the OPTICS POWER ON pushbutton goes out.

62. Perform the calculations on the calculation sheet and complete the data sheets.

TARGET 2 DATA INSERTION

17. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500

b. Row 2 displays +00000

c. Row 3 displays 00002

If the displays are correct, proceed to step 19, if not proceed to step 18.

18. Perform the following DSKY operations: To correct only Row 1

a. VERB 21 ENTR

b. +13500 ENTR

To correct only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00002.

19. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

COARSE MARK STAR 1

20. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

21. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 22, if not press the MARK REJECT and repeat this step.

COARSE MARK STAR 2

22. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to target #4

---

location. Wait until the optics stop driving before proceeding.

23. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 24, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

24. The Stable Member will be coarse aligned to the desired test position. In approximately 90 seconds VERB 51 and NOUN 30 shall commence flashing. Set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

25. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press ENTR and proceed to step 26, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

26. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #4 location. Wait until the optics stops driving before proceeding.

27. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 28, if not press MARK REJECT and repeat this step.

Y PIPA ABOUT Z MISALIGNMENT

28. In approximately 10 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

29. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT Y MISALIGNMENT

30. When VERB 06 and NOUN 66 commence flashing. Row 1 and Row 2 shall contain the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

31. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 2

32. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

33. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

34. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 2 ENTRY

35. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
   VERB 21 NOUN 30 Flashing
c. +00002 ENTR
d. Observe
   VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
   VERB 23 NOUN 30 Flashing
g. +00001 ENTR

36. Repeat steps 7 through 27.

X PIPA ABOUT Y MISALIGNMENT

37. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

38. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Y PIPA ABOUT X MISALIGNMENT

39. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

40. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 3

41. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 15 seconds then set the OPTICS MODE switch to MAN.

42. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. +00000 ENTR
c. +00000 ENTR
d. +00000 ENTR

43. Set the G & N Mounting Fixture Tilt Axis to 0°. Take care not to strain or break hoses or cables.

44. Using the Optics Hand Controller, drive the SXT shaft to -90° as indicated on the T PAK shaft readout. (Set the CONTROLLER SPEED switch to HI and LO as required.) (0° Trunnion)

45. Adjust the G & N Mounting Fixture Tilt Axis until the SXT control horizontal reticle line is centered on the horizontal reticle line of target #1.

46. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

---

47. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 3 ENTRY

48. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
   VERB 21 NOUN 30 Flashing
c. +00003 ENTR
d. Observe
   VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
   VERB 23 NOUN 30 Flashing
g. +00000 ENTR

49. Repeat steps 14 through 19.

COARSE MARK STAR 1

50. Set the CONTROLLER SPEED switch set to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 51, if not press MARK REJECT and repeat this step.

COARSE MARK STAR #2

51. Set the OPTICS MODE switch to MANUAL and the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

52. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central verticle reticle line is centered on the horizontal reticle line and dot of target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 53, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

53. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 00.0° respectively.

54. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 55, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

55. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics

---

until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

56. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of Target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 57. If not press MARK REJECT and repeat this step.

X PIPA ABOUT Z MISALIGNMENT

57. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

58. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT X MISALIGNMENT

59. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

TEST TERMINATION

60. Perform the following DSKY operations:

a. VERB 34 ENTR
b. The PROG display shall indicate 00
c. VERB 41 NOUN 20 ENTR
d. +00000 ENTR
e. +00000 ENTR
f. +00000 ENTR

61. Set the G & N Mounting Fixture Tilt axis to 32.5°. Take care not to strain or break the hoses or cables and press OPTICS POWER ON pushbutton on the Test Control panel so that the OPTICS POWER ON pushbutton goes out.

62. Perform the calculations on the calculation sheet and complete the data sheets.

REFERENCES

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: To prevent erroneous test results, complete each test position within 25 minutes after entering that position.

DESCRIPTION: This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars.) The SXT measures star angles with respect to the Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment. The X and Z Stable Member axis are in turn aligned to local vertical.

INITIALIZATION

1. Establish a Master Initialization condition and press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Make the following switch settings on the Indicator Control panel:

a. OPTICS MODE to ZERO
b. OPTICS SPEED to LO
c. OPTICS COUPLING TO DIRECT
d. OPTICS TRACKER to OFF
e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

2A. Perform the following DSKY operations:

VERB 01	NOUN 10	ENTR
00003		ENTR

VERIFICATION WITH SIDL REQUIRED BEFORE USE

Record Row 1 indication. If the recorded value is within any of the sets of limits given on the data sheet proceed with the test. If the recorded value is not within any of the sets of limits wait 30 minutes and then repeat this step.

TEST ENTRY

3. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

4. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +135.00
b. Row 2 displays +XX.XXX (Test site latitude from Table 1).

If the displays are correct, proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations:

To change only Row 1
a. VERB 21 ENTR
b. +13500 ENTR
To change only Row 2
c. VERB 22 ENTR
d. SITE LATITUDE ENTR

TEST POSITION 1 ENTRY

6. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00001 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00001 ENTR

Y_{NB} AZIMUTH AND ELEVATION

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +27000
b. Row 2 displays +00000
c. Row 3 displays 00001

8. If the displays are correct, proceed to step 10, if not proceed to step 9.

9. Perform the following DSKY operations:

To change only Row 1
a. VERB 21 ENTR
b. +27000 ENTR
To change only Row 2
c. VERB 22 ENTR
d. +00000 ENTR
Row 3 shall indicate 00001.

10. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z_{NB} AZIMUTH AND ELEVATION

11. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +18000
b. Row 2 displays +00000
c. Row 3 displays 00002

If the displays are correct, proceed to step 13, if not proceed to step 12.

12. Perform the following DSKY operations:

To change only Row 1
a. VERB 21 ENTR
b. +18000 ENTR

To change only Row 2
c. VERB 22 ENTR
d. +00000 ENTR
Row 3 shall indicate 00002.

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 1 DATA INSERTION

14. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +18000
b. Row 2 displays +00000
c. Row 3 displays 00001

If the displays are correct, proceed to step 16, if not proceed to step 15.

15. Perform the following DSKY operations: To correct only Row 1

a. VERB 21 ENTR
b. +18000 ENTR
To correct only Row 2
c. VERB 22 ENTR
d. +00000 ENTR
Row 3 shall indicate 00001

16. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 2 DATA INSERTION

17. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +00000
c. Row 3 displays 00002

If the displays are correct, proceed to step 19, if not proceed to step 18.

18. Perform the following DSKY operations: To correct only Row 1

a. VERB 21 ENTR
b. +13500 ENTR
To correct only Row 2
c. VERB 22 ENTR
d. +00000 ENTR
Row 3 shall indicate 00002.

19. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

COARSE MARK STAR 1

20. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

21. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 22, if not press the MARK REJECT and repeat this step.

COARSE MARK STAR 2

22. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to target #4

---

location. Wait until the optics stop driving before proceeding.

23. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 24, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

24. The Stable Member will be coarse aligned to the desired test position. In approximately 90 seconds VERB 51 and NOUN 30 shall commence flashing. Set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

25. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press ENTR and proceed to step 26, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

26. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #4 location. Wait until the optics stops driving before proceeding.

27. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 28, if not press MARK REJECT and repeat this step.

Y PIPA ABOUT Z MISALIGNMENT

28. In approximately 10 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

29. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT Y MISALIGNMENT

30. When VERB 06 and NOUN 66 commence flashing. Row 1 and Row 2 shall contain the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

31. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 2

32. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

32A. Repeat step 2A.

33. Perform the following DSKY operations:

a. VERB 57		ENTR
b. 00003		ENTR

34. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500

b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 2 ENTRY

35. Perform the following DSKY operations:

a. VERB 33		ENTR
b. Observe		
VERB 21	NOUN 30	Flashing
c. +00002		ENTR
d. Observe		
VERB 22	NOUN 30	Flashing
e. +00000		ENTR
f. Observe		
VERB 23	NOUN 30	Flashing
g. +00001		ENTR

36. Repeat steps 7 through 27.

X PIPA ABOUT Y MISALIGNMENT

37. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

38. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Y PIPA ABOUT X MISALIGNMENT

39. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

40. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 3

41. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 15 seconds then set the OPTICS MODE switch to MAN.

42. Perform the following DSKY operations:

a. VERB 41	NOUN 20	ENTR
b. +00000		ENTR
c. +00000		ENTR
d. +00000		ENTR

43. Set the G & N Mounting Fixture Tilt Axis to 0°. Take care not to strain or break hoses or cables.

44. Using the Optics Hand Controller, drive the SXT shaft to -90° as indicated on the T PAK shaft readout. (Set the CONTROLLER SPEED switch to HI and LO as required.) (0° Trunnion)

45. Adjust the G & N Mounting Fixture Tilt Axis until the SXT control horizontal reticle line is centered on the horizontal reticle line of target #1.

45A. Repeat step 2A.

46. Perform the following DSKY operations:

a. VERB 57		ENTR
b. 00003		ENTR

---

47. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500

b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 3 ENTRY

48. Perform the following DSKY operations:

a. VERB 33		ENTR
b. Observe		
VERB 21	NOUN 30	Flashing
c. +00003		ENTR
d. Observe		
VERB 22	NOUN 30	Flashing
e. +00000		ENTR
f. Observe		
VERB 23	NOUN 30	Flashing
g. +00000		ENTR

49. Repeat steps 14 through 19.

COARSE MARK STAR 1

50. Set the CONTROLLER SPEED switch set to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 51, if not press MARK REJECT and repeat this step.

COARSE MARK STAR #2

51. Set the OPTICS MODE switch to MANUAL and the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

52. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central verticle reticle line is centered on the horizontal reticle line and dot of target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 53, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

53. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 00.0° respectively.

54. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 55, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

55. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

---

56. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of Target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 57. If not press MARK REJECT and repeat this step.

X PIPA ABOUT Z MISALIGNMENT

57. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

58. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT X MISALIGNMENT

59. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

TEST TERMINATION

60. Perform the following DSKY operations:

a. VERB 34		ENTR
b. The PROG display shall indicate 00		
c. VERB 41	NOUN 20	ENTR
d. +00000		ENTR
e. +00000		ENTR
f. +00000		ENTR

61. Set the G & N Mounting Fixture Tilt axis to 32.5°. Take care not to strain or break the hoses or cables and press OPTICS POWER ON pushbutton on the Test Control panel so that the OPTICS POWER ON pushbutton goes out.

62. Perform the calculations on the calculation sheet and complete the data sheets.

REFERENCES

IMPORTANT 1. To prevent erroneous test results, complete each test position (Cont. below)

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: within 25 minutes after entering that position.
2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

DESCRIPTION: This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars.) The SXT measures star angles with respect to the Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment. The X and Z Stable Member axis are in turn aligned to local vertical.

INITIALIZATION

1. Establish a Master Initialization condition and press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Make the following switch settings on the Indicator Control panel:

a. OPTICS MODE to ZERO
b. OPTICS SPEED to LO
c. OPTICS COUPLING TO DIRECT
d. OPTICS TRACKER to OFF
e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

2A. Perform the following DSKY operations:

VERB 01 NOUN 10 ENTR
00003 ENTR

VERIFICATION WITH SIDL REQUIRED BEFORE USE

Record Row 1 indication. If the recorded value is within any of the sets of limits given on the data sheet proceed with the test. If the recorded value is not within any of the sets of limits wait 30 minutes and then repeat this step.

TEST ENTRY

3. Perform the following DSKY operations:
a. VERB 57 ENTR
b. 00003 ENTR

4. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
a. Row 1 displays +135.00
b. Row 2 displays +XX.XXX (Test site latitude from Table 1).

If the displays are correct, proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations:
To change only Row 1
a. VERB 21 ENTR
b. +13500 ENTR
To change only Row 2
c. VERB 22 ENTR
d. SITE LATITUDE ENTR

TEST POSITION 1 ENTRY

6. Perform the following DSKY operations:
a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00001 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00001 ENTR

Y_{NB} AZIMUTH AND ELEVATION

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
a. Row 1 displays +27000
b. Row 2 displays +00000
c. Row 3 displays 00001

8. If the displays are correct, proceed to step 10, if not proceed to step 9.

9. Perform the following DSKY operations:
To change only Row 1
a. VERB 21 ENTR
b. +27000 ENTR
To change only Row 2
c. VERB 22 ENTR
d. +00000 ENTR
Row 3 shall indicate 00001.

10. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z_{NB} AZIMUTH AND ELEVATION

11. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
a. Row 1 displays +18000
b. Row 2 displays +00000
c. Row 3 displays 00002

If the displays are correct, proceed to step 13, if not proceed to step 12.

12. Perform the following DSKY operations:
To change only Row 1
a. VERB 21 ENTR
b. +18000 ENTR

To change only Row 2
c. VERB 22 ENTR
d. +00000 ENTR
Row 3 shall indicate 00002.

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 1 DATA INSERTION

14. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
a. Row 1 displays +18000
b. Row 2 displays +00000
c. Row 3 displays 00001

If the displays are correct, proceed to step 16, if not proceed to step 15.

15. Perform the following DSKY operations: To correct only Row 1
a. VERB 21 ENTR
b. +18000 ENTR
To correct only Row 2
c. VERB 22 ENTR
d. +00000 ENTR
Row 3 shall indicate 00001

16. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 2 DATA INSERTION

17. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
a. Row 1 displays -13500
b. Row 2 displays +00000
c. Row 3 displays 00002

If the displays are correct, proceed to step 19, if not proceed to step 18.

18. Perform the following DSKY operations: To correct only Row 1
a. VERB 21 ENTR
b. +13500 ENTR
To correct only Row 2
c. VERB 22 ENTR
d. +00000 ENTR
Row 3 shall indicate 00002.

19. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

COARSE MARK STAR 1

20. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

21. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 22, if not press the MARK REJECT and repeat this step.

COARSE MARK STAR 2

22. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to target #4

---

location. Wait until the optics stop driving before proceeding.

23. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 24, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

24. The Stable Member will be coarse aligned to the desired test position. In approximately 90 seconds VERB 51 and NOUN 30 shall commence flashing. Set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

25. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press ENTR and proceed to step 26, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

26. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #4 location. Wait until the optics stops driving before proceeding.

27. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 28, if not press MARK REJECT and repeat this step.

Y PIPA ABOUT Z MISALIGNMENT

28. In approximately 10 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

29. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT Y MISALIGNMENT

30. When VERB 06 and NOUN 66 commence flashing. Row 1 and Row 2 shall contain the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

31. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 2

32. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

32A. Repeat step 2A.

33. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

34. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 2 ENTRY

35. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21' NOUN 30 Flashing
c. +00002 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00001 ENTR

36. Repeat steps 7 through 27.

X PIPA ABOUT Y MISALIGNMENT

37. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

38. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Y PIPA ABOUT X MISALIGNMENT

39. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

40. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 3

41. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 15 seconds then set the OPTICS MODE switch to MAN.

42. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. +00000 ENTR
c. +00000 ENTR
d. +00000 ENTR

43. Set the G & N Mounting Fixture Tilt Axis to 0°. Take care not to strain or break hoses or cables.

44. Using the Optics Hand Controller, drive the SXT shaft to -90° as indicated on the T PAK shaft readout. (Set the CONTROLLER SPEED switch to HI and LO as required.) (0° Trunnion)

45. Adjust the G & N Mounting Fixture Tilt Axis until the SXT control horizontal reticle line is centered on the horizontal reticle line of target #1.

45A. Repeat step 2A.

46. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

---

47. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 3 ENTRY

48. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00003 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00000 ENTR

49. Repeat steps 14 through 19.

COARSE MARK STAR 1

50. Set the CONTROLLER SPEED switch set to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 51, if not press MARK REJECT and repeat this step.

COARSE MARK STAR #2

51. Set the OPTICS MODE switch to MANUAL and the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

52. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central verticle reticle line is centered on the horizontal reticle line and dot of target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 53, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

53. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 00.0° respectively.

54. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 55, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

55. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics

---

until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

56. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of Target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 57. If not press MARK REJECT and repeat this step.

X PIPA ABOUT Z MISALIGNMENT

57. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

58. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT X MISALIGNMENT

59. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

TEST TERMINATION

60. Perform the following DSKY operations:

a. VERB 34 ENTR
b. The PROG display shall indicate 00
c. VERB 41 NOUN 20 ENTR
d. +00000 ENTR
e. +00000 ENTR
f. +00000 ENTR

61. Set the G & N Mounting Fixture Tilt axis to 32.5°. Take care not to strain or break the hoses or cables and press OPTICS POWER ON pushbutton on the Test Control panel so that the OPTICS POWER ON pushbutton goes out.

62. Perform the calculations on the calculation sheet and complete the data sheets.

IMPORTANT: within 25 minutes after entering that position.
2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

DESCRIPTION: This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars.) The SXT measures star angles with respect to the Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment. The X and Z Stable Member axis are in turn aligned to local vertical.

INITIALIZATION

1. Establish a Master Initialization condition and press OPTICS POWER ON pushbutton on Test Control panel and the OPTICS POWER ON pushbutton shall light.

2. Make the following switch settings on the Indicator Control panel:
- a. OPTICS MODE to MAN, and then to ZERO
- b. OPTICS SPEED to LO
- c. OPTICS COUPLING to DIRECT
- d. OPTICS TRACKER to OFF
- e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

2A. Perform the following DSKY operations:

VERB 01 NOUN 10 ENTR
00003 ENTR

VERIFICATION WITH SIDL REQUIRED BEFORE USE

Record Row 1 indication. If the recorded value is within any of the sets of limits given on the data sheet proceed with the test. If the recorded value is not within any of the sets of limits wait 30 minutes and then repeat this step.

TEST ENTRY

3. Perform the following DSKY operations:
- a. VERB 57 ENTR
- b. 00003 ENTR

4. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
- a. Row 1 displays +135.00
- b. Row 2 displays +XX.XXX (Test site latitude from Table 1).

If the displays are correct, proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations:

To change only Row 1
- a. VERB 21 ENTR
- b. +13500. ENTR

To change only Row 2
- c. VERB 22 ENTR
- d. SITE LATITUDE ENTR

TEST POSITION 1 ENTRY

  VERB 23 NOUN 30 Flashing
- g. +00001 ENTR

Y_{NB} AZIMUTH AND ELEVATION

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
- a. Row 1 displays +27000
- b. Row 2 displays +00000
- c. Row 3 displays 00001

8. If the displays are correct, proceed to step 10, if not proceed to step 9.

9. Perform the following DSKY operations:

To change only Row 1
- a. VERB 21 ENTR
- b. +27000 ENTR

To change only Row 2
- c. VERB 22 ENTR
- d. +00000 ENTR

Row 3 shall indicate 00001.

10. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z_{NB} AZIMUTH AND ELEVATION

11. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
- a. Row 1 displays +18000
- b. Row 2 displays +00000
- c. Row 3 displays 00002

If the displays are correct, proceed to step 13, if not proceed to step 12.

12. Perform the following DSKY operations:

To change only Row 1
- a. VERB 21 ENTR
- b. +18000 ENTR

To change only Row 2
- c. VERB 22 ENTR
- d. +00000 ENTR

Row 3 shall indicate 00002.

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 1 DATA INSERTION

14. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
- a. Row 1 displays +18000
- b. Row 2 displays +00000
- c. Row 3 displays 00001

If the displays are correct, proceed to step 16, if not proceed to step 15.

15. Perform the following DSKY operations: To correct only Row 1
- a. VERB 21 ENTR
- b. +18000 ENTR

To correct only Row 2
- c. VERB 22 ENTR
- d. +00000 ENTR

Row 3 shall indicate 00001

16. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 2 DATA INSERTION

17. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
- a. Row 1 displays +13500
- b. Row 2 displays +00000
- c. Row 3 displays 00002

If the displays are correct, proceed to step 19, if not proceed to step 18.

18. Perform the following DSKY operations: To correct only Row 1
- a. VERB 21 ENTR
- b. +13500 ENTR

To correct only Row 2
- c. VERB 22 ENTR
- d. +00000 ENTR

Row 3 shall indicate 00002.

19. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

COARSE MARK STAR 1

20. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

21. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 22, if not press the MARK REJECT and repeat this step.

COARSE MARK STAR 2

22. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to target #4 location. Wait until the optics stop driving before proceeding.

---

23. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 24, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

24. The Stable Member will be coarse aligned to the desired test position. In approximately 90 seconds VERB 51 and NOUN 30 shall commence flashing. Set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

NOTE: Minimize the time between MARKS taken in step 25 and step 27.

25. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press ENTR and proceed to step 26, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

26. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #4 location. Wait until the optics stops driving before proceeding.

27. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 28, if not press MARK REJECT and repeat this step.

Y PIPA ABOUT Z MISALIGNMENT

28. In approximately 10 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

29. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT Y MISALIGNMENT

30. When VERB 06 and NOUN 66 commence flashing. Row 1 and Row 2 shall contain the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

31. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 2

32. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

32A. Repeat step 2A.

33. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

34. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 2 ENTRY

35. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00002 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00001 ENTR

36. Repeat steps 7 through 27.

X PIPA ABOUT Y MISALIGNMENT

37. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

38. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Y PIPA ABOUT X MISALIGNMENT

39. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

40. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 3

41. Set the OPTICS MODE switch on the Indicator Control panel to ZERO. Wait 15 seconds then set the OPTICS MODE switch to MAN.

42. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. +00000 ENTR
c. +00000 ENTR
d. +00000 ENTR

43. Set the G & N Mounting Fixture Tilt Axis to 0°. Take care not to strain or break hoses or cables.

44. Using the Optics Hand Controller, drive the SXT shaft to -90° as indicated on the T PAK shaft readout. (Set the CONTROLLER SPEED switch to HI and LO as required.) (0° Trunnion)

45. Adjust the G & N Mounting Fixture Tilt Axis until the SXT control horizontal reticle line is centered on the horizontal reticle line of target #1.

45A. Repeat step 2A.

46. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

---

47. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 3 ENTRY

48. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00003 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00000 ENTR

49. Repeat steps 14 through 19.

COARSE MARK STAR 1

50. Set the CONTROLLER SPEED switch set to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 51, if not press MARK REJECT and repeat this step.

COARSE MARK STAR #2

51. Set the OPTICS MODE switch to MANUAL and the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

52. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central verticle reticle line is centered on the horizontal reticle line and dot of target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 53, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

53. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 00.0° respectively.

54. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 55, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

55. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

---

56. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of Target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 57. If not press MARK REJECT and repeat this step.

X PIPA ABOUT Z MISALIGNMENT

57. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

58. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT X MISALIGNMENT

59. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

TEST TERMINATION

60. Perform the following DSKY operations:

a. VERB 34 ENTR
b. The PROG display shall indicate 00
c. VERB 41 NOUN 20 ENTR
d. +00000 ENTR
e. +00000 ENTR
f. +00000 ENTR

61. Set the G & N Mounting Fixture Tilt axis to 32.5°. Take care not to strain or break the hoses or cables and press OPTICS POWER ON pushbutton on the Test Control panel so that the OPTICS POWER ON pushbutton goes out.

62. Perform the calculations on the calculation sheet and complete the data sheets.

REFERENCES

IMPORTANT 1. To prevent erroneous test results, complete each test position (Cont. below)

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: within 25 minutes after entering that position.
2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

DESCRIPTION: This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars.) The SXT measures star angles with respect to the Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment. The X and Z Stable Member axis are in turn aligned to local vertical.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press to light OPTICS POWER ON pushbutton on Test Control panel.

2. Perform the following switch settings on the applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set
   (1) OPTICS ZERO to OFF then to ZERO
   (2) OPTICS TEL TRUN to SLAVE TO SXT
   (3) OPTICS COUPLING to DIRECT
   (4) OPTICS MODE to MAN
   (5) OPTICS SPEED to LO

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

FORM [illegible]
Chg. 3-[illegible]

---

b. On all Indicator Control panels except 2021290 set
   (1) OPTICS MODE to MAN then to ZERO
   (2) OPTICS CONTROLLER SPEED to LO
   (3) OPTICS CONTROLLER COUPLING to DIRECT
   (4) OPTICS TRACKER to OFF
   (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

2A. Perform the following DSKY operations:

VERB 01 NOUN 10 ENTR
00003 ENTR

Record Row 1 indication. If the recorded value is within any of the sets of limits given on the data sheet proceed with the test. If the recorded value is not within any of the sets of limits wait 30 minutes and then repeat this step.

TEST ENTRY

3. Perform the following DSKY operations:
a. VERB 57 ENTR
b. 00003 ENTR

4. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
a. Row 1 displays +135.00
b. Row 2 displays +XX.XXX (Test site latitude from Table 1).

If the displays are correct, proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations:
To change only Row 1
a. VERB 21 ENTR
b. +13500 ENTR
To change only Row 2
c. VERB 22 ENTR
d. SITE LATITUDE ENTR

TEST POSITION 1 ENTRY

6. Perform the following DSKY operations:
a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00001 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00001 ENTR

Y_{NB} AZIMUTH AND ELEVATION

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
a. Row 1 displays +27000
b. Row 2 displays +00000
c. Row 3 displays 00001

8. If the displays are correct, proceed to step 10, if not proceed to step 9.

9. Perform the following DSKY operations:
To change only Row 1
a. VERB 21 ENTR
b. +27000 ENTR

To change only Row 2
c. VERB 22 ENTR
d. +00000 ENTR
Row 3 shall indicate 00001.

10. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z_{NB} AZIMUTH AND ELEVATION

11. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
a. Row 1 displays +18000
b. Row 2 displays +00000
c. Row 3 displays 00002

If the displays are correct, proceed to step 13, if not proceed to step 12.

12. Perform the following DSKY operations:
To change only Row 1
a. VERB 21 ENTR
b. +18000 ENTR
To change only Row 2
c. VERB 22 ENTR
d. +00000 ENTR
Row 3 shall indicate 00002.

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 1 DATA INSERTION

14. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
a. Row 1 displays +18000
b. Row 2 displays +00000
c. Row 3 displays 00001

If the displays are correct, proceed to step 16, if not proceed to step 15.

15. Perform the following DSKY operations: To correct only Row 1
a. VERB 21 ENTR
b. +18000 ENTR
To correct only Row 2
c. VERB 22 ENTR
d. +00000 ENTR
Row 3 shall indicate 00001

16. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 2 DATA INSERTION

17. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
a. Row 1 displays +13500
b. Row 2 displays +00000
c. Row 3 displays 00002

If the displays are correct, proceed to step 19, if not proceed to step 18.

18. Perform the following DSKY operations: To correct only Row 1
a. VERB 21 ENTR
b. +13500 ENTR
To correct only Row 2
c. VERB 22 ENTR
d. +00000 ENTR
Row 3 shall indicate 00002.

19. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

COARSE MARK STAR 1

20. When VERB 51 and NOUN 30 commence flashing, set OPTICS ZERO switch (on Indicator Control panel 2021290 only) to OFF then set OPTICS MODE switch to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

---

21. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel.
If conditions are satisfactory, press the ENTR pushbutton and proceed to step 22, if not press the MARK REJECT and repeat this step.

COARSE MARK STAR 2

22. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to target #4 location. Wait until the optics stop driving before proceeding.

23. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel.
If conditions are satisfactory, press the ENTR pushbutton and proceed to step 24, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

24. The Stable Member will be coarse aligned to the desired test position. In approximately 90 seconds VERB 51 and NOUN 30 shall commence flashing. Set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

NOTE: Minimize the time between MARKS taken in step 25 and step 27.

25. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press ENTR and proceed to step 26, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

26. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #4 location. Wait until the optics stops driving before proceeding.

27. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT

central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 28, if not press MARK REJECT and repeat this step.

Y PIPA ABOUT Z MISALIGNMENT

28. In approximately 10 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

29. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT Y MISALIGNMENT

30. When VERB 06 and NOUN 66 commence flashing. Row 1 and Row 2 shall contain the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

31. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 2

32. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

32A. Repeat step 2A.

33. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

34. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 2 ENTRY

35. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
   VERB 21 NOUN 30 Flashing
c. +00002 ENTR
d. Observe
   VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
   VERB 23 NOUN 30 Flashing
g. +00001 ENTR

36. Repeat steps 7 through 27.

X PIPA ABOUT Y MISALIGNMENT

37. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

38. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Y PIPA ABOUT X MISALIGNMENT

39. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

---

40. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 3

41. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO for 20 seconds then return to OFF. On all Indicator Control panels except 2021290, set OPTICS MODE switch to ZERO for 20 seconds then return to MAN.

42. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. +00000 ENTR
c. +00000 ENTR
d. +00000 ENTR

43. Set the G & N Mounting Fixture Tilt Axis to 0°. Take care not to strain or break hoses or cables.

44. Using the Optics Hand Controller, drive the SXT shaft to -90° as indicated on the TPAC shaft readout. (Set the OPTICS SPEED switch to HI and LO as required.) (0° Trunnion)

45. Adjust the G & N Mounting Fixture Tilt Axis until the SXT control horizontal reticle line is centered on the horizontal reticle line of target #1.

45A. Repeat step 2A.

46. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

47. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 3 ENTRY

48. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
   VERB 21 NOUN 30 Flashing
c. +00003 ENTR
d. Observe
   VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
   VERB 23 NOUN 30 Flashing
g. +00000 ENTR

49. Repeat steps 14 through 19.

COARSE MARK STAR 1

50. Set OPTICS SPEED switch on Indicator Control panel to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 51, if not press MARK REJECT and repeat this step.

COARSE MARK STAR #2

51. Set OPTICS SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

---

52. Set the OPTICS SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central verticle reticle line is centered on the horizontal reticle line and dot of target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 53, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

53. When VERB 51 and NOUN 30 commence flashing, set the OPTICS SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 00.0° respectively.

54. Set the OPTICS SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 55, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

55. When VERB 51 and NOUN 30 commence flashing, set the OPTICS SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

56. Set the OPTICS SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of Target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 57. If not press MARK REJECT and repeat this step.

X PIPA ABOUT Z MISALIGNMENT

57. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

58. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT X MISALIGNMENT

59. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

TEST TERMINATION

60. Perform the following DSKY operations:

a. VERB 34 ENTR
b. The PROG display shall indicate 00
c. VERB 41 NOUN 20 ENTR
d. +00000 ENTR
e. +00000 ENTR
f. +00000 ENTR

61. Set G & N Mounting Fixture Tilt axis to 32.5°. Take care not to strain or break hoses or cables.

---

62. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

63. Perform the calculations on the calculation sheet and complete the data sheets.

JOB G & N FINE ALIGN TEST | JDC 12218 REV. K PAGE 1 OF 8 | INITIAL TDRR 29882 D.S. PGS. 4

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION See below.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL		REFERENCES
			JDC	D.S.	MIT	NASA	
A	7-28-66	30303	6,7	-	EA	WS	
B	9-1-66	30927	7	-	JP	-	
C	10-20-66	31615	1	-	EA	-	IMPORTANT 1. To prevent erroneous test results, complete each test position (Cont. below)
D	11-10-66	31897	1,7	1	EA	-	
E	11-15-66	31943	7	-	EA	-	
F	4-5-67	33491	1,5	1	EA	-	INTERVAL
G	9-6-67	34560	1	-	EA	-	
H	9-14-67	34610	1,3,4	-	EA	-	TOOLS AND MATERIAL
J	10-12-67	34831	1,3,5,6,7	4	EA	-	
K	1-4-68	35362	1,7	-	EA	-	

IMPORTANT: within 25 minutes after entering that position. 2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops. 3. Insure that cable W226 is removed and connector assembly (2003009) is connected to CGC test connector.

DESCRIPTION: This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars.) The SXT measures star angles with respect to the Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment. The X and Z Stable Member axis are in turn aligned to local vertical.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press to light OPTICS POWER ON pushbutton on Test Control panel.

2. Perform the following switch settings on the applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set

(1) OPTICS ZERO to OFF then to ZERO

(2) OPTICS TEL TRUN to SLAVE TO SXT

(3) OPTICS COUPLING to DIRECT

(4) OPTICS MODE to MAN

(5) OPTICS SPEED to LO

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

JOB G & N FINE ALIGN TEST | JDC 12218 REV K PAGE 2 OF 8

SUBSYSTEM G & N SYSTEM | ASSY

b. On all Indicator Control panels except 2021290 set

(1) OPTICS MODE to MAN then to ZERO

(2) OPTICS CONTROLLER SPEED to LO

(3) OPTICS CONTROLLER COUPLING to DIRECT

(4) OPTICS TRACKER to OFF

(5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

2A. Perform the following DSKY operations:

VERB 01 NOUN 10 ENTR

00003 ENTR

Record Row 1 indication. If the recorded value is within any of the sets of limits given on the data sheet proceed with the test. If the recorded value is not within any of the sets of limits wait 30 minutes and then repeat this step.

TEST ENTRY

3. Perform the following DSKY operations:

a. VERB 57 ENTR

b. 00003 ENTR

4. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +135.00

b. Row 2 displays +XX.XXX (Test site latitude from Table 1).

If the displays are correct, proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations:

To change only Row 1

a. VERB 21 ENTR

b. +13500 ENTR

To change only Row 2

c. VERB 22 ENTR

d. SITE LATITUDE ENTR

TEST POSITION 1 ENTRY

6. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe

VERB 21 NOUN 30 Flashing

c. +00001 ENTR

d. Observe

VERB 22 NOUN 30 Flashing

e. +00000 ENTR

f. Observe

VERB 23 NOUN 30 Flashing

g. +00001 ENTR

Y_{NB} AZIMUTH AND ELEVATION

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +27000

b. Row 2 displays +00000

c. Row 3 displays 00001

8. If the displays are correct, proceed to step 10, if not proceed to step 9.

9. Perform the following DSKY operations:

To change only Row 1

a. VERB 21 ENTR

b. +27000 ENTR

DATE 30 JUN 66

JOB G & N FINE ALIGN TEST | JDC 12218 REV K PAGE 3 OF 8

SUBSYSTEM G & N SYSTEM | ASSY

To change only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00001.

10. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z_{NB} AZIMUTH AND ELEVATION

11. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +18000

b. Row 2 displays +00000

c. Row 3 displays 00002

If the displays are correct, proceed to step 13, if not proceed to step 12.

12. Perform the following DSKY operations:

To change only Row 1

a. VERB 21 ENTR

b. +18000 ENTR

To change only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00002.

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 1 DATA INSERTION

14. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +18000

b. Row 2 displays +00000

c. Row 3 displays 00001

If the displays are correct, proceed to step 16, if not proceed to step 15.

15. Perform the following DSKY operations: To correct only Row 1

a. VERB 21 ENTR

b. +18000 ENTR

To correct only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00001

16. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 2 DATA INSERTION

17. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500

b. Row 2 displays +00000

c. Row 3 displays 00002

If the displays are correct, proceed to step 19, if not proceed to step 18.

18. Perform the following DSKY operations: To correct only Row 1

a. VERB 21 ENTR

b. + 13500 ENTR

To correct only Row 2

c. VERB 22 ENTR

d. +00000 ENTR

Row 3 shall indicate 00002.

19. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

COARSE MARK STAR 1

20. When VERB 51 and NOUN 30 commence flashing, set OPTICS ZERO switch (on Indicator Control panel 2021290 only)

DATE 30 JUN 66

JOB G & N FINE ALIGN TEST | JDC 12218 REV K PAGE 4 OF 8

SUBSYSTEM G & N SYSTEM | ASSY

to OFF then set OPTICS MODE switch to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

21. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 22, if not press the MARK REJECT and repeat this step.

COARSE MARK STAR 2

22. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to target #4 location. Wait until the optics stop driving before proceeding.

23. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 24, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

24. The Stable Member will be coarse aligned to the desired test position. In approximately 90 seconds VERB 51 and NOUN 30 shall commence flashing. Set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

NOTE: Minimize the time between MARKS taken in step 25 and step 27.

25. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press ENTR and proceed to step 26, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

26. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #4 location. Wait until the optics stops driving before proceeding.

27. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT

DATE 30 JUN 66

central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 28, if not press MARK REJECT and repeat this step.

Y PIPA ABOUT Z MISALIGNMENT

28. In approximately 10 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

29. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT Y MISALIGNMENT

30. When VERB 06 and NOUN 66 commence flashing. Row 1 and Row 2 shall contain the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

31. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 2

32. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

32A. Repeat step 2A.

33. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

34. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 2 ENTRY

35. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00002 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00001 ENTR

36. Repeat steps 7 through 27.

X PIPA ABOUT Y MISALIGNMENT

37. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

38. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Y PIPA ABOUT X MISALIGNMENT

39. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

40. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 3

41. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO for 20 seconds then return to OFF. On all Indicator Control panels except 2021290, set OPTICS MODE switch to ZERO for 20 seconds then return to MAN.

42. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. +00000 ENTR
c. +00000 ENTR
d. +00000 ENTR

43. Set the G & N Mounting Fixture Tilt Axis to 0°. Take care not to strain or break hoses or cables.

44. Using the Optics Hand Controller, drive the SXT shaft to -90° as indicated on the TPAC shaft readout. (Set the OPTICS SPEED switch to HI and LO as required.) (0° Trunnion)

45. Adjust the G & N Mounting Fixture Tilt Axis until the SXT control horizontal reticle line is centered on the horizontal reticle line of target #1.

45A. Repeat step 2A.

46. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

47. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 3 ENTRY

48. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00003 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00000 ENTR

49. Repeat steps 14 through 19.

COARSE MARK STAR 1

50. Set OPTICS SPEED switch on Indicator Control panel to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 51, if not press MARK REJECT and repeat this step.

COARSE MARK STAR #2

51. Set OPTICS SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

52. Set the OPTICS SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central verticle reticle line is centered on the horizontal reticle line and dot of target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 53, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

53. When VERB 51 and NOUN 30 commence flashing, set the OPTICS SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 00.0° respectively.

NOTE: Minimize the time between MARKS taken in step 54 and step 56.

54. Set the OPTICS SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 55, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

55. When VERB 51 and NOUN 30 commence flashing, set the OPTICS SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

56. Set the OPTICS SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of Target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 57. If not press MARK REJECT and repeat this step.

X PIPA ABOUT Z MISALIGNMENT

57. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

58. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT X MISALIGNMENT

59. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

TEST TERMINATION

60. Perform the following DSKY operations:

a. VERB 34 ENTR
b. The PROG display shall indicate 00
c. VERB 41 NOUN 20 ENTR
d. +00000 ENTR
e. +00000 ENTR
f. +00000 ENTR

61. Set G & N Mounting Fixture Tilt axis to 32.5°. Take care not to strain or break hoses or cables.

62. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

63. Perform the calculations on the calculation sheet and complete the data sheets.

REFERENCES

IMPORTANT 1. To prevent erroneous test results, complete each test position (Cont. below)

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: within 25 minutes after entering that position. 2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops. 3. Insure that cable W226 is removed and connector assembly (2003009) is connected to CGC test connector.

DESCRIPTION: This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars.) The SXT measures star angles with respect to the Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment. The X and Z Stable Member axis are in turn aligned to local vertical.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press to light OPTICS POWER ON pushbutton on Test Control panel.

2. Perform the following switch settings on the applicable Indicator Control panel.

a. On Indicator Control panel 2021290 only set
   (1) OPTICS ZERO to OFF then to ZERO
   (2) OPTICS TEL TRUN to SLAVE TO SXT
   (3) OPTICS COUPLING to DIRECT
   (4) OPTICS MODE to MAN
   (5) OPTICS SPEED to LO

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

b. On all Indicator Control panels except 2021290 set
   (1) OPTICS MODE to MAN then to ZERO
   (2) OPTICS CONTROLLER SPEED to LO
   (3) OPTICS CONTROLLER COUPLING to DIRECT
   (4) OPTICS TRACKER to OFF
   (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

2A. Perform the following DSKY operations:

VERB 01 NOUN 10 ENTR
00003 ENTR

Record Row 1 indication. If the recorded value is within any of the sets of limits given on the data sheet proceed with the test. If the recorded value is not within any of the sets of limits wait 30 minutes and then repeat this step.

TEST ENTRY

3. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00003 ENTR

4. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +135.00
b. Row 2 displays +XX.XXX (Test site latitude from Table 1).

If the displays are correct, proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations:

To change only Row 1
a. VERB 21 ENTR
b. +13500 ENTR
To change only Row 2
c. VERB 22 ENTR
d. SITE LATITUDE ENTR

TEST POSITION 1 ENTRY

6. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00001 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00001 ENTR

Y_{NB} AZIMUTH AND ELEVATION

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +27000
b. Row 2 displays +00000
c. Row 3 displays 00001

8. If the displays are correct, proceed to step 10, if not proceed to step 9.

9. Perform the following DSKY operations:

To change only Row 1
a. VERB 21 ENTR
b. +27000 ENTR

To change only Row 2
c. VERB 22 ENTR
d. +00000 ENTR

Row 3 shall indicate 00001.

10. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z_{NB} AZIMUTH AND ELEVATION

11. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +18000
b. Row 2 displays +00000
c. Row 3 displays 00002

If the displays are correct, proceed to step 13, if not proceed to step 12.

12. Perform the following DSKY operations:

To change only Row 1
a. VERB 21 ENTR
b. +18000 ENTR
To change only Row 2
c. VERB 22 ENTR
d. +00000 ENTR

Row 3 shall indicate 00002.

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 1 DATA INSERTION

14. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +18000
b. Row 2 displays +00000
c. Row 3 displays 00001

If the displays are correct, proceed to step 16, if not proceed to step 15.

15. Perform the following DSKY operations: To correct only Row 1
a. VERB 21 ENTR
b. +18000 ENTR
To correct only Row 2
c. VERB 22 ENTR
d. +00000 ENTR

Row 3 shall indicate 00001

16. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 2 DATA INSERTION

17. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +00000
c. Row 3 displays 00002

If the displays are correct, proceed to step 19, if not proceed to step 18.

18. Perform the following DSKY operations: To correct only Row 1
a. VERB 21 ENTR
b. +13500 ENTR
To correct only Row 2
c. VERB 22 ENTR
d. +00000 ENTR

Row 3 shall indicate 00002.

19. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

COARSE MARK STAR 1

20. When VERB 51 and NOUN 30 commence flashing, set OPTICS ZERO switch (on Indicator Control panel 2021290 only) to OFF then set OPTICS MODE switch to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

---

21. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 22, if not press the MARK REJECT and repeat this step.

COARSE MARK STAR 2

22. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to target #4 location. Wait until the optics stop driving before proceeding.

23. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 24, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

24. The Stable Member will be coarse aligned to the desired test position. In approximately 90 seconds VERB 51 and NOUN 30 shall commence flashing. Set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

NOTE: Minimize the time between MARKS taken in step 25 and step 27.

25. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press ENTR and proceed to step 26, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

26. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #4 location. Wait until the optics stops driving before proceeding.

27. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT

central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press the ENTR pushbutton and proceed to step 28, if not press MARK REJECT and repeat this step.

Y PIPA ABOUT Z MISALIGNMENT

28. In approximately 10 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

29. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT Y MISALIGNMENT

30. When VERB 06 and NOUN 66 commence flashing. Row 1 and Row 2 shall contain the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

31. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 2

32. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

32A. Repeat step 2A.

33. Perform the following DSKY operations:
a. VERB 57 ENTR
b. 00003 ENTR

34. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 2 ENTRY

35. Perform the following DSKY operations:
a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00002 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00001 ENTR

36. Repeat steps 7 through 27.

X PIPA ABOUT Y MISALIGNMENT

37. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

38. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Y PIPA ABOUT X MISALIGNMENT

39. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

40. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

INITIALIZATION POSITION 3

41. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO for 20 seconds then return to OFF. On all Indicator Control panels except 2021290, set OPTICS MODE switch to ZERO for 20 seconds then return to MAN.

42. Perform the following DSKY operations:
a. VERB 41 NOUN 20 ENTR
b. +00000 ENTR
c. +00000 ENTR
d. +00000 ENTR

43. Set the G & N Mounting Fixture Tilt Axis to 0°. Take care not to strain or break hoses or cables.

44. Using the Optics Hand Controller, drive the SXT shaft to -90° as indicated on the TPAC shaft readout. (Set the OPTICS SPEED switch to HI and LO as required.) (0° Trunnion)

45. Adjust the G & N Mounting Fixture Tilt Axis until the SXT control horizontal reticle line is centered on the horizontal reticle line of target #1.

45A. Repeat step 2A.

46. Perform the following DSKY operations:
a. VERB 57 ENTR
b. 00003 ENTR

47. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 3 ENTRY

48. Perform the following DSKY operations:
a. VERB 33 ENTR
b. Observe
VERB 21 NOUN 30 Flashing
c. +00003 ENTR
d. Observe
VERB 22 NOUN 30 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 30 Flashing
g. +00000 ENTR

49. Repeat steps 14 through 19.

COARSE MARK STAR 1

50. Set OPTICS SPEED switch on Indicator Control panel to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 51, if not press MARK REJECT and repeat this step.

COARSE MARK STAR #2

51. Set OPTICS SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

52. Set the OPTICS SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central verticle reticle line is centered on the horizontal reticle line and dot of target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 53, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

53. When VERB 51 and NOUN 30 commence flashing, set the OPTICS SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 00.0° respectively.

NOTE: Minimize the time between MARKS taken in step 54 and step 56.

54. Set the OPTICS SPEED switch to LO. Using Optics Hand Controller, drive optics until SXT vertical reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 55, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

55. When VERB 51 and NOUN 30 commence flashing, set the OPTICS SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

56. Set the OPTICS SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of Target #3. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 57. If not press MARK REJECT and repeat this step.

X PIPA ABOUT Z MISALIGNMENT

57. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

58. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT X MISALIGNMENT

59. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

TEST TERMINATION

60. Perform the following DSKY operations:
a. VERB 34 ENTR
b. The PROG display shall indicate 00
c. VERB 41 NOUN 20 ENTR
d. +00000 ENTR
e. +00000 ENTR
f. +00000 ENTR

61. Set G & N Mounting Fixture Tilt axis to 32.5°. Take care not to strain or break hoses or cables.

62. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

63. Perform the calculations on the calculation sheet and complete the data sheets.

MANUAL LOAD PROCEDURES

TOOLS AND MATERIAL: None

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press to light OPTICS POWER ON pushbutton on Test Control panel.

2. Using the Optics Hand Controller, position the SXT trunnion between 0^o and 10^o as indicated by the trunnion TPAC.

3. Perform the following switch settings on the applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set:
   (1) OPTICS ZERO to OFF then to ZERO
   (2) OPTICS TEL TRUN to SLAVE TO SXT
   (3) OPTICS COUPLING to RSLV
   (4) OPTICS MODE to MAN
   (5) OPTICS SPEED to LO

b. On all Indicator Control panels except 2021290 set:
   (1) OPTICS MODE to MAN then to ZERO
   (2) OPTICS CONTROLLER SPEED to LO
   (3) OPTICS CONTROLLER COUPLING to RSLV
   (4) OPTICS TRACKER to OFF
   (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

JOB G & N FINE ALIGN TEST | JDC 12218 REV. N PAGE 1 OF 46
INITIAL TDRR 29882 D.S. PGS 1

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars). The SXT measures (cont)

REFERENCES

IMPORTANT 1. To prevent erroneous test results, complete each test position (Cont. below)

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION (cont): star angles with respect to Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment.

The X and Z Stable Member axis are in turn aligned to local vertical.

IMPORTANT: 1. To prevent erroneous test results, complete each test position within 25 minutes after entering that position.

2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

3. Insure that cable W226 is removed and connector assembly (2003099) is connected to CGC test connector.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

MANUAL LOAD PROCEDURES

TOOLS AND MATERIAL: None

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press to light OPTICS POWER ON pushbutton on Test Control panel.

2. Using the Optics Hand Controller, position the SXT trunnion between 0^o and 10^o as indicated by the trunnion TPAC.

3. Perform the following switch settings on the applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set:
   (1) OPTICS ZERO to OFF then to ZERO
   (2) OPTICS TEL TRUN to SLAVE TO SXT
   (3) OPTICS COUPLING to RSLV
   (4) OPTICS MODE to MAN
   (5) OPTICS SPEED to LO

b. On all Indicator Control panels except 2021290 set:
   (1) OPTICS MODE to MAN then to ZERO
   (2) OPTICS CONTROLLER SPEED to LO
   (3) OPTICS CONTROLLER COUPLING to RSLV
   (4) OPTICS TRACKER to OFF
   (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

MANUAL LOAD PROCEDURES

CTS UPLINK TAPE LOAD PROCEDURES

NOTE: Prepare the CMC for the UPLINK code by establishing the following conditions on the CTS:

(A) Connect Self Test Assembly, 2014392, to Buffer Box Assembly, 2014254, by connecting P1 to J4, P2 to J5, P3 to J6, and P4 to J10.

(B) Connect Buffer Box Assembly to CTS by connecting W236 P1 to J1 on Buffer Box and P2 to J5 on CTS, W237 P1 to J2 on Buffer Box and P2 to J11 on CTS, W238 P1 to J3 on Buffer Box and P2 to J17 on CTS, and W239 P1 to J9 on Buffer Box and P2 to J18 on CTS.

(C) Set digit switches on Self Test Assembly to 00000.

(D) Self Test panel - Press to light SELF TEST pushbutton.

(E) Tape Reader - Set Power switch to ON. Load the CTS UPLINK tape. If alarms occur, press PROCEED and ALARM RESET pushbuttons on Programmer and Monitor panel and RSET pushbutton on DSKY.

INITIAL TDRR 29882 D.S. PGS. 5

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars). The SXT measures (cont)

REFERENCES

IMPORTANT 1. To prevent erroneous test results, complete each test position (Cont. below)

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION (cont): star angles with respect to Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment.

The X and Z Stable Member axis are in turn aligned to local vertical.

IMPORTANT: 1. To prevent erroneous test results, complete each test position within 25 minutes after entering that position.

2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

3. Insure that cable W226 is removed and connector assembly (2003099) is connected to CGC test connector.

NOTE: Prepare the CMC for the UPLINK code by establishing the following conditions on the CTS:

(A) Connect Self Test Assembly, 2014392, to Buffer Box Assembly, 2014254, by connecting P1 to J4, P2 to J5, P3 to J6, and P4 to J10.

(B) Connect Buffer Box Assembly to CTS by connecting W236 P1 to J1 on Buffer Box and P2 to J5 on CTS, W237 P1 to J2 on Buffer Box and P2 to J11 on CTS, W238 P1 to J3 on Buffer Box and P2 to J17 on CTS, and W239 P1 to J9 on Buffer Box and P2 to J18 on CTS.

(C) Set digit switches on Self Test Assembly to 00000.

(D) Self Test panel - Press to light SELF TEST pushbutton.

(E) Tape Reader - Set Power switch to ON. Load the CTS UPLINK tape. If alarms occur, press PROCEED and ALARM RESET pushbuttons on Programmer and Monitor panel and RSET pushbutton on DSKY.

JOB G & N FINE ALIGN TEST | JDC 12218 REV. R PAGE 1 OF 46.

INITIAL TDRR 29882 D.S. PGS 5

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars). The SXT measures (cont)

REFERENCES

IMPORTANT 1. To prevent erroneous test results, complete each test position (Cont. below)

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION (cont): star angles with respect to Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment.

The X and Z Stable Member axis are in turn aligned to local vertical.

IMPORTANT: 1. To prevent erroneous test results, complete each test position within 25 minutes after entering that position.

2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

3. Insure that cable W226 is removed and connector assembly (2003099) is connected to CGC test connector.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

MANUAL LOAD PROCEDURES

TOOLS AND MATERIAL: None

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press to light OPTICS POWER ON pushbutton on Test Control panel.

2. Using the Optics Hand Controller, position the SXT trunnion between 0^o and 10^o as indicated by the trunnion TPAC.

3. Perform the following switch settings on the applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set:
  (1) OPTICS ZERO to OFF then to ZERO
  (2) OPTICS TEL TRUN to SLAVE TO SXT
  (3) OPTICS COUPLING to RSLV
  (4) OPTICS MODE to MAN
  (5) OPTICS SPEED to LO

b. On all Indicator Control panels except 2021290 set:
  (1) OPTICS MODE to MAN then to ZERO
  (2) OPTICS CONTROLLER SPEED to LO
  (3) OPTICS CONTROLLER COUPLING to RSLV
  (4) OPTICS TRACKER to OFF
  (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

JOB G & N FINE ALIGN TEST

JDC 12218 REV. S PAGE 1 OF 46

INITIAL TDRR 29882 D.S. PGS 1

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars). The SXT measures (cont)

REFERENCES

IMPORTANT 1. To prevent erroneous test results, complete each test position (Cont. below)

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION (cont): star angles with respect to Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment.

The X and Z Stable Member axis are in turn aligned to local vertical.

IMPORTANT: 1. To prevent erroneous test results, complete each test position within 25 minutes after entering that position.

2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

3. Insure that cable W226 is removed and connector assembly (2003099) is connected to CGC test connector.

JOB G & N FINE ALIGN TEST | JDC 12218 REV. T PAGE 1 OF 46 | INITIAL TDRR 29882 D.S. PGS 1

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars). The SXT measures (cont)

REFERENCES

IMPORTANT 1. To prevent erroneous test results, complete each test position (Cont. below)

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION (cont): star angles with respect to Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment.

The X and Z Stable Member axis are in turn aligned to local vertical.

IMPORTANT: 1. To prevent erroneous test results, complete each test position within 25 minutes after entering that position.

2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

3. Insure that cable W226 is removed and connector assembly (2003099) is connected to CGC test connector.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

INITIAL TDRR 29882 **D.S. PGS** 5

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars). The SXT measures (cont)

REFERENCES

IMPORTANT 1. To prevent erroneous test results, complete each test position (Cont. below)

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION (cont): star angles with respect to Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment.

The X and Z Stable Member axis are in turn aligned to local vertical.

IMPORTANT: 1. To prevent erroneous test results, complete each test position within 25 minutes after entering that position.

2. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

MANUAL LOAD PROCEDURES

TOOLS AND MATERIAL: None

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Press to light OPTICS POWER ON pushbutton on Test Control panel.

2. Using the Optics Hand Controller, position the SXT trunnion between 0° and 10° as indicated by the trunnion TPAC.

3. Perform the following switch settings on the applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set:
   - (1) OPTICS ZERO to OFF then to ZERO
   - (2) OPTICS TEL TRUN to SLAVE TO SXT
   - (3) OPTICS COUPLING to RSLV
   - (4) OPTICS MODE to MAN
   - (5) OPTICS SPEED to LO

b. On all Indicator Control panels except 2021290 set:
   - (1) OPTICS MODE to MAN then to ZERO
   - (2) OPTICS CONTROLLER SPEED to LO
   - (3) OPTICS CONTROLLER COUPLING to RSLV
   - (4) OPTICS TRACKER to OFF
   - (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION: This test determines the overall G & N System accuracy to which the Stable Member can be aligned anywhere within a reference coordinate system. The alignment technique is based on the fact that SXT sightings of two stars can be used to orient the Stable Member (Laboratory targets #1 and #4 are used as simulated stars.) The SXT measures star angles with respect to the Nav Base. The orientation of the Stable Member with respect to the Nav Base is obtained from the IMU gimbal angles. The CMC uses this information to align the Stable Member to Southeast, Southwest and Vertical with respect to the laboratory coordinate system. The CMC uses the Southeast and Southwest PIPA outputs as a criteria of alignment. The X and Z Stable Member axis are in turn aligned to local vertical.

INITIALIZATION

1. Establish a Master Initialization condition.

2. Make the following switch settings on the Indicator Control panel:
   a. OPTICS MODE to ZERO
   b. OPTICS SPEED to LO
   c. OPTICS COUPLING TO DIRECT
   d. OPTICS TRACKER to OFF
   e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

TEST ENTRY

3. Perform the following DSKY operations:
   a. VERB 57 ENTR
   b. 00003 ENTR

4. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
   a. Row 1 displays +135.00

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ______

---

b. Row 2 displays +XX.XXX (Test site latitude from Table 1).

If the displays are correct, proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations:

To change only Row 1
   a. VERB 21 ENTR
   b. +13500 ENTR

To change only Row 2
   c. VERB 22 ENTR
   d. SITE LATITUDE ENTR

TEST POSITION 1 ENTRY

6. Perform the following DSKY operations:
   a. VERB 33 ENTR
   b. Observe
      VERB 21 NOUN 30 Flashing
   c. +00001 ENTR
   d. Observe
      VERB 22 NOUN 30 Flashing
   e. +00000 ENTR
   f. Observe
      VERB 23 NOUN 30 Flashing
   g. +00001 ENTR

Y_{NB} AZIMUTH AND ELEVATION

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
   a. Row 1 displays +27000
   b. Row 2 displays +00000
   c. Row 3 displays 00001

8. If the displays are correct, proceed to step 10, if not proceed to step 9.

9. Perform the following DSKY operations:

To change only Row 1
   a. VERB 21 ENTR
   b. +27000 ENTR

To change only Row 2
   c. VERB 22 ENTR
   d. +00000 ENTR

Row 3 shall indicate 00001.

10. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z_{NB} AZIMUTH AND ELEVATION

11. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
   a. Row 1 displays +18000
   b. Row 2 displays +00000
   c. Row 3 displays 00002

If the displays are correct, proceed to step 13, if not proceed to step 12.

12. Perform the following DSKY operations:

To change only Row 1.
   a. VERB 21 ENTR
   b. +18000 ENTR

To change only Row 2
   c. VERB 22 ENTR
   d. +00000 ENTR

Row 3 shall indicate 00002.

13. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 1 DATA INSERTION

14. When VERB 06 and NOUN 61 commence

DATE ______

---

flashing, insure that the DSKY displays the following:
   a. Row 1 displays +18000
   b. Row 2 displays +00000
   c. Row 3 displays 00001

If the displays are correct, proceed to step 16, if not proceed to step 15.

15. Perform the following DSKY operations: To correct only Row 1
   a. VERB 21 ENTR
   b. +18000 ENTR

To correct only Row 2
   c. VERB 22 ENTR
   d. +00000 ENTR

Row 3 shall indicate 00001

16. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

TARGET 2 DATA INSERTION

17. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:
   a. Row 1 displays +13500
   b. Row 2 displays +00000
   c. Row 3 displays 00002

If the displays are correct, proceed to step 19, if not proceed to step 18.

18. Perform the following DSKY operations: To correct only Row 1
   a. VERB 21 ENTR
   b. +13500 ENTR

To correct only Row 2
   c. VERB 22 ENTR
   d. +00000 ENTR

Row 3 shall indicate 00002.

19. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

COARSE MARK STAR 1

20. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

21. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 22, if not press the MARK REJECT and repeat this step.

COARSE MARK STAR 2

22. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to target #4

DATE ______

---

location. Wait until the optics stop driving before proceeding.

23. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the Optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 24, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

24. The Stable Member will be coarse aligned to the desired test position. In approximately 90 seconds VERB 51 and NOUN 30 shall commence flashing. Set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #1 location. Wait until the optics stop driving before proceeding.

25. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton on the Indicator Control panel. If conditions are satisfactory, press ENTR and proceed to step 26, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

26. When VERB 51 and NOUN 30 commence flashing, set the OPTICS MODE switch on the Indicator Control panel to CMC. The CMC will automatically align the SXT to the target #4 location. Wait until the optics stops driving before proceeding.

27. Set the OPTICS MODE switch to MAN. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton on the Indicator Control panel.

If conditions are satisfactory, press the ENTR pushbutton and proceed to step 28, if not press MARK REJECT and repeat this step.

Y PIPA ABOUT Z MISALIGNMENT

28. In approximately 10 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

29. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT Y MISALIGNMENT

30. When VERB 06 and NOUN 66 commence flashing. Row 1 and Row 2 shall contain the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

31. Enter VERB 34 and press the ENTR pushbutton on the DSKY.

DATE ______

INITIALIZATION POSITION 2

32. Set the OPTICS MODE switch on the Indicator Control panel to ZERO.

33. Perform the following DSKY operations:

a. VERB 57	ENTR
b. 00003	ENTR

34. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

a. Row 1 displays +13500
b. Row 2 displays +XX.XXX (Test site latitude from Table 1)

TEST POSITION 2 ENTRY

e. +00000		ENTR
f. Observe		
VERB 23	NOUN 30	Flashing
g. +00000		ENTR

49. Repeat steps 14 through 19.

COARSE MARK STAR 1

50. Set the CONTROLLER SPEED switch set to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the vertical reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 51, if not press MARK REJECT and repeat this step.

COARSE MARK STAR #2

51. Set the OPTICS MODE switch to MANUAL and the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

52. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central verticle reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 53, if not press MARK REJECT and repeat this step.

FINE MARK STAR 1

53. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 00.0° respectively.

54. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 55, if not press MARK REJECT and repeat this step.

FINE MARK STAR 2

55. When VERB 51 and NOUN 30 commence flashing, set the CONTROLLER SPEED switch to HI. Use the Optics Hand Controller to drive the optics

until the Shaft and Trunnion counters on the T PAC indicate 270.0° and 45.0° respectively.

56. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of Target #4. Press the MARK pushbutton. If conditions are satisfactory, press ENTR and proceed to step 57, if not press MARK REJECT and repeat this step.

X PIPA ABOUT Z MISALIGNMENT

57. In approximately 7 minutes, VERB 06 and NOUN 66 shall commence flashing. Record Row 1 and Row 2 indications.

58. Enter VERB 33 and press the ENTR pushbutton on the DSKY.

Z PIPA ABOUT X MISALIGNMENT

59. When VERB 06 and NOUN 66 commence flashing, Row 1 and Row 2 shall display the second horizontal PIPA misalignment. Record Row 1 and Row 2 indications.

TEST TERMINATION

60. Perform the following DSKY operations:

a. VERB 34 ENTR
b. The PROG display shall indicate 00

c. VERB 41	NOUN 20	ENTR
d. +00000		ENTR
e. +00000		ENTR
f. +00000		ENTR

61. Set the G & N Mounting Fixture Tilt axis to 32.5°. Take care not to strain or break the hoses or cables.

62. Perform the calculations on the calculation sheet and complete the data sheets.

JOB IRIG SCALE FACTOR TEST
INITIAL TDRR 29882 D.S. PGS 3
SUBSYSTEM G & N SYSTEM
ASSY.

DESCRIPTION The average plus and minus torquing scale factor error of each IRIG is determined in this JDC. The input axis of the tested IRIG is positioned east (or west) to minimize earth rate effects. A CGC program provides torquing to the IRIG under Test. Each IRIG is torqued ±22.5° by monitoring the CDU of the gimbal placed parallel to the test IRIG's input (cont below)

DESCRIPTION (cont)
axis for 2048 counts. The number of CGC torquing pulses required to torque the test IRIG 22.5 is determined and IRIG scale factor is calculated.

INITIALIZATION

1. Insure that the G & N Cradle Assembly is set to 32.5° and the system is in a Master Initialization Condition.

2. Insure that the G & N system has been in ISS OPERATE for a minimum of one hour before proceeding. Record the GYRO WHEEL time on the data sheet.

3. Enter VERB 57 and press the ENTR pushbutton on the DSKY. Enter 5 and press the ENTR pushbutton. The PROG display shall indicate 07.

4. When VERB 06 and NOUN 61 flash, insure that Row 1 on the DSKY indicates the navigation base azimuth of +18000 and that Row 2 indicates the latitude of the site where this test is being performed (See Table 1). If Row 1 and Row 2 indications are correct, enter VERB 33 and press the ENTR pushbutton on the DSKY, then proceed to step 6. If Row 1 and/or Row 2 indications are incorrect, proceed to step 5.

DESCRIPTION The average plus and minus torquing scale factor error of each IRIG is determined in this JDC. The input axis of the tested IRIG is positioned east (or west) to minimize earth rate effects. A CGC program provides torquing to the IRIG under Test. Each IRIG is torqued ±22.5° by monitoring the CDU of the gimbal placed parallel to the test IRIG's input (cont below)

DESCRIPTION (cont)
axis for 2048 counts. The number of CGC torquing pulses required to torque the test IRIG 22.5 is determined and IRIG scale factor is calculated.

INITIALIZATION

1. Insure that the G & N Cradle Assembly is set to 32.5° and the system is in a Master Initialization Condition (JDC 12215).

2. Insure that the G & N system has been in ISS OPERATE for a minimum of one hour before proceeding. Record the GYRO WHEEL time on the data sheet.

3. Enter VERB 57 and press the ENTR pushbutton on the DSKY. Enter 5 and press the ENTR pushbutton. The PROG display shall indicate 07.

4. When VERB 06 and NOUN 61 flash, insure that Row 1 on the DSKY indicates the navigation base azimuth of +18000 and that Row 2 indicates the latitude of the site where this test is being performed (See Table 1). If Row 1 and Row 2 indications are correct, enter VERB 33 and press the ENTR pushbutton on the DSKY, then proceed to step 6. If Row 1 and/or Row 2 indications are incorrect, proceed to step 5.

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION (cont)
on the Oscillograph. After the gimbal friction test, the OG, MG and IG stab loop responses are tested by providing a step input to each DC Stab Amp.

IMPORTANT: 1. All starred (**) parameters on the Data Sheet must be corrected by the multiplication factor found on the signal identification drawings to obtain the true value.

2. The OSCILLOGRAPH sensitivities called out in this JDC are initial values. Operators may change sensitivities as required for optimum resolution.

INITIALIZATION

1. Establish a MASTER INITIALIZATION condition.

2. Set the CROSSBAR CONTROL on the Primary Signal Selector to panel to 220.

3. Measure the 28 VDC Bus voltage indicated on the DVM. Record the indication.

4. Insure that the Inner, Middle and Outer gimbals are set to 0.0° as indicated on the Gimbal Position Control panel. If not, perform the following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe VERB 21	NOUN 22	Flashing
c.	+00000		ENTR

INITIAL TDRR 29882 **D.S PGS** 2

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION A gimbal friction test is performed by driving the Outer and Inner gimbals through plus and minus 360°, one at a time, and the Middle gimbal through 135°. During the slew periods the Fine and Coarse CDU errors and gimbal torque motor current are monitored (continued below).

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION (cont)
on the Oscillograph. After the gimbal friction test, the OG, MG and IG stab loop responses are tested by providing a step input to each DC Stab Amp.

IMPORTANT: 1. All starred (**) parameters on the Data Sheet must be corrected by the multiplication factor found on the signal identification drawings to obtain the true value.

2. The OSCILLOGRAPH sensitivities called out in this JDC are initial values. Operators may change sensitivities as required for optimum resolution.

INITIALIZATION

1. Establish a MASTER INITIALIZATION condition.

2. Set the CROSSBAR CONTROL on the Primary Signal Selector to panel to 220.

3. Measure the 28 VDC Bus voltage indicated on the DVM. Record the indication.

4. Insure that the Inner, Middle and Outer gimbals are set to 0.0° as indicated on the Gimbal Position Control panel. If not, perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR

VERIFICATION WITH SIDL REQUIRED BEFORE USE

l.	63777		ENTR
m.	Observe VERB 22	NOUN 01	Flashing
n.	40000		ENTR

46. The GIMBAL LOCK CAUTION lamp on the Monitor panel shall light.

47. Set the sensitivities on the Oscillograph Amplifier as follows:
a. CHANNEL 2 to 5 MV/MM
b. CHANNEL 4 to .1 V/CM
c. CHANNEL 5 to 50 MV/MM

48. Set the chart speed to 1 on the Oscillograph Control panel.

NOTE: Middle Gimbal pulse torquing will start approximately 90 seconds after performance of the DSKY operations in the following step.

49. Perform the following DSKY operations:

a.	VERB 42		ENTR
b.	VERB 33		ENTR

When the Middle Gimbal indicator on the Gimbal Position Control panel starts to move, set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

50. When the Middle Gimbal Indicator appears to stop, in approximately 4 minutes, stop the Oscillograph and record the maximum amplitude (neglect spikes) of CHANNEL 2, 4 and 5 on the data sheets. Set all sensitivities on the Oscillograph Amplifier to OFF.

51. Remove all jumper cables placed during this procedure.

52. Perform the following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe VERB 21	NOUN 22	Flashing
c.	+00000		ENTR
d.	Observe VERB 22	NOUN 22	Flashing
e.	+00000		ENTR
f.	Observe VERB 23	NOUN 22	Flashing
g.	+00000		ENTR
h.	Observe VERB 41	NOUN 22	Displayed

IG STEP RESPONSE

53. Set the following controls on the Oscillograph Signal Selector panel to monitor the associated signals:

	CHANNEL Position	Signal
a.	1-2	IG & Y Gyro Error Signal
b.	2-2	MG Error Signal
c.	3-2	OG Error Signal

54. Insure that CH3AC pushbutton on the Oscillograph Signal Selector panel is lighted.

55. Press the CHART SPEEDS 100 pushbutton on the Oscillograph Control panel and set the following channel sensitivities on the Oscillograph Amplifier panel:
a. CHANNEL 1 to 50 MV/MM

b. CHANNEL 2 to 10 MV/MM
c. CHANNEL 3 to 10 MV/MM

56. Set the PHASE SHIFT SELECTOR on the phase sensitive Demodulators of CHANNELS 1, 2 and 3 to 3200~ 0 deg.

57. Connect a jumper between TB5-27 of TPA #2 and TB2-11 of TPA #2.

58. Perform the following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe VERB 21	NOUN 22	Flashing
c.	+00000		ENTR
d.	Observe VERB 22	NOUN 22	Flashing
e.	+00000		ENTR
f.	Observe VERB 23	NOUN 22	Flashing
g.	+00000		ENTR
h.	Observe VERB 41	NOUN 22	Displayed
i.	Wait 60 seconds		
j.	VERB 36		ENTR

59. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

60. Set and hold the SERVO TEST switch on the TPA #2 in the up position.

61. After a constant servo error is observed on CHANNEL 1 of the Oscillograph, release the SERVO TEST switch and stop the Oscillograph.

62. Record the IG stabilization loop response time on CHANNEL 1 of the Oscilloscope Chart by measuring the time interval between releasing the SERVO TEST switch and the peak magnitude of the first overshoot. In addition, record the number of overshoots after the initial disturbance.

MG STEP RESPONSE

63. Set the sensitivities on the Oscillograph Amplifier panel as follows:
a. CHANNEL 1 to 10 MV/MM
b. CHANNEL 2 to 50 MV/MM
c. CHANNEL 3 to 10 MV/MM

64. Remove the jumper of step 57 and connect between TB5-18 of TPA #2 and TB2-10 of TPA #2.

65. Perform the following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe VERB 21	NOUN 22	Flashing
c.	+00000		ENTR
d.	Observe VERB 22	NOUN 22	Flashing
e.	+00000		ENTR
f.	Observe VERB 23	NOUN 22	Flashing
g.	+00000		ENTR
h.	Observe VERB 41	NOUN 22	Displayed
i.	Wait 60 seconds		
j.	VERB 36		ENTR

66. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

67. Set and hold the SERVO TEST switch on the TPA #2 in the up position.

68. After a constant servo error is observed on CHANNEL 2 of the Oscillograph, release the SERVO TEST switch and stop the Oscillograph.

69. Record the MG stabilization loop response time on CHANNEL 2 of the Oscillograph Chart by measuring the time interval between releasing the SERVO TEST switch and the peak magnitude of the first overshoot. In addition, record the number of overshoots after the initial disturbance.

OG STEP RESPONSE

70. Set the sensitivities on the Oscillograph Amplifier panel as follows:

a. CHANNEL 1 to 10 MV/MM
b. CHANNEL 2 to 10 MV/MM
c. CHANNEL 3 to 50 MV/MM

71. Remove the jumper of step 64 and connect between TB5-18 of TPA #2 and TB2-4 of TPA #2.

72. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. Wait 60 seconds
j. VERB 36 ENTR

73. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

74. Set and hold the SERVO TEST switch on the TPA #2 in the up position.

75. After a constant servo error is observed on CHANNEL 3 of the Oscillograph, release the SERVO TEST switch and stop the Oscillograph.

76. Record the OG stabilization loop response time on CHANNEL 3 of the Oscillograph Chart by measuring the time interval between releasing the SERVO TEST switch and the peak magnitude of the first overshoot. In addition, record the number of overshoots after the initial disturbance. Remove jumpers connected in step 71.

NORMALIZATION OF SYSTEM

77. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. Observe VERB 21 NOUN 22 Flashing
d. +00000 ENTR
e. Observe VERB 22 NOUN 22 Flashing

DESCRIPTION (cont)
on the Oscillograph. After the gimbal friction test, the OG, MG and IG stab loop responses are tested by providing a step input to each DC Stab Amp.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 220.

3. Measure the 28 VDC Bus voltage indicated on the DVM. Record the indication.

4. Insure that the Inner, Middle and Outer gimbals are set to 0.0° as indicated on the Gimbal Position Control panel. If not, perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing

c. OG CDU Coarse Error on CHANNEL 5.

10. Insure that CH3AC, CH4DC and CH5AC pushbuttons on the Oscillograph Signal Selector panel are lighted. Insure that the PHASE SHIFT SELECTOR switches on the Oscillograph Phase Sensitive Demodulators for CHANNELS 1, 2, 3, and 5 are set to the 800 ~ 0 DEG position and the FILTER switches are set to the LO position.

11. Set the sensitivities on the Oscillograph Amplifier as follows:

a. CHANNEL 3 to 10 MV/MM

b. CHANNEL 4 to 0.2 V/CM

c. CHANNEL 5 to 10 MV/MM

12. Connect P2 of W65 to J15 on TPA #2 and set the IRIG SCALE FACTOR switch on the TPA #2 to 1.

13. Press CHART SPEEDS 1 pushbutton on the Oscillograph Control panel.

NOTE: Outer Gimbal pulse torquing will start approximately 90 seconds after performance of the DSKY operations in the following step.

14. Perform the following DSKY operations:

a. VERB 42 ENTR

b. VERB 33 ENTR

When the Outer Gimbal indicator on the Gimbal Position Control panel starts to move, set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC and measure and record the GYRO PVR output on the Current Source Monitor panel per JDC 18016.

15. When the Outer Gimbal Indicator appears to stop, in approximately 11 minutes, stop the Oscillograph. Set all sensitivities on the Oscillograph to OFF.

+OG FRICTION TEST

16. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR

b. Observe VERB 21 NOUN 22 Flashing

d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. Wait 60 seconds
j. VERB 36 ENTR

66. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

67. Set and hold the SERVO TEST switch on the TPA #2 in the up position.

68. After a constant servo error is observed on CHANNEL 2 of the Oscillograph, release the SERVO TEST switch and stop the Oscillograph.

69. Determine and record the number of error signal oscillation peaks outside ±1 mm of the final value. (See Figure 2.) Record magnitude A. Record the time t_f for the error signal to reach and stay within 1 mm of its final value.

OG STEP RESPONSE

70. Set the sensitivities on the Oscillograph Amplifier panel as follows:

a. CHANNEL 1 to 10 MV/MM
b. CHANNEL 2 to 10 MV/MM
c. CHANNEL 3 to 20 MV/MM

71. Connect the 5^V step input to the OG TDA test input by removing the jumper of step 64 and connecting it between TB5-18 of TPA #2 and TB2-4 of TPA #2.

72. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. Wait 60 seconds
j. VERB 36 ENTR

73. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

74. Set and hold the SERVO TEST switch on the TPA #2 in the up position.

75. After a constant servo error is observed on CHANNEL 3 of the Oscillograph, release the SERVO TEST switch and stop the Oscillograph.

76. Determine and record the number of error signal oscillation peaks outside ±1 mm of the final value. (See Figure 2.) Record magnitude A. Record the time t_f for the error signal to reach and stay within 1 mm of its final value. Remove jumpers connected in step 71.

NORMALIZATION OF SYSTEM

77. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. Observe VERB 21 NOUN 22 Flashing

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION A gimbal friction test is performed by driving the Outer and Inner gimbals through plus and minus 360°, one at a time, and the Middle gimbal through 135°. During the slew periods the Fine and Coarse CDU errors and gimbal torque motor current are monitored (continued below)

TOOLS AND MATERIAL

DESCRIPTION (cont)
on the Oscillograph. After the gimbal friction test, the OG, MG and IG stab loop responses are tested by providing a step input to each DC Stab Amp.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 220.

3. Measure the 28 VDC Bus voltage indicated on the DVM. Record the indication.

4. Insure that the Inner, Middle and Outer gimbals are set to 0.0° as indicated on the Gimbal Position Control panel. If not, perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. Wait 60 seconds
j. VERB 36 ENTR
k. VERB 40 NOUN 20 ENTR

4A. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 00362 ENTR
c. 16002 ENTR

VERIFICATION WITH SIDL REQUIRED BEFORE USE

SUBSYSTEM G & N SYSTEM | ASSY

STATIC LOOP PARAMETERS

5. Set the Primary Signal Selector panel to monitor the following signals on PAVM. Record the in-phase voltage for each:

Voltage	CROSSBAR CONTROL
a. OG Error Signal	133
b. MG error Signal	134
c. IG Error Signal	135

6. Set the Primary Signal Selector panel to monitor the following signals on the PAVM. Record the total voltage value of each:

Voltage	CROSSBAR CONTROL
a. OG TDA	136
b. MG TDA	137
c. IG TDA	138

-OG FRICTION

7. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. VERB 24 NOUN 01 ENTR
j. 00405 ENTR
k. Observe VERB 21 NOUN 01 Flashing
l. 37776 ENTR
m. Observe VERB 22 NOUN 01 Flashing
n. 37777 ENTR

8. Place jumpers between the following points:

GSE	From	To
AIP	DIRECT PROBES OUTPUT	CH4DC
AIP	BUFFERED PROBES OUTPUT	CH5AC
TPA#2	DIRECT PROBE	TB1-45 (hi) 49(lo)
TPA#2	BUFFERED PROBE	TB2-35 (hi) 18(lo)

9. Set CHANNEL 3 on the Oscillograph Signal Selector panel to 5 and CHANNEL 4 and 5 to AUX and monitor the following signals:

a. OG CDU Fine Error on CHANNEL 3
b. OG TM current on CHANNEL 4
c. OG CDU Coarse Error on CHANNEL 5.

10. Insure that CH3AC, CH4DC and CH5AC pushbuttons on the Oscillograph Signal Selector panel are lighted. Insure that the PHASE SHIFT SELECTOR switches on the Oscillograph Phase Sensitive Demodulators for CHANNELS 1, 2, 3, and 5 are set to the 800 ~ 0 DEG position and the FILTER switches are set to the LO position.

SUBSYSTEM G & N SYSTEM | ASSY

11. Set the sensitivities on the Oscillograph Amplifier as follows:

a. CHANNEL 3 to 10 MV/MM
b. CHANNEL 4 to 0.2 V/CM
c. CHANNEL 5 to 10 MV/MM

12. Connect P2 of W65 to J15 on TPA #2 and set the IRIG SCALE FACTOR switch on the TPA #2 to 1.

13. Press CHART SPEEDS 1 pushbutton on the Oscillograph Control panel.

NOTE: Outer Gimbal pulse torquing will start approximately 90 seconds after performance of the DSKY operations in the following step.

14. Perform the following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

When the Outer Gimbal indicator on the Gimbal Position Control panel starts to move, set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC and measure and record the GYRO PVR output on the Current Source Monitor panel per JDC 18016.

15. When the Outer Gimbal Indicator appears to stop, in approximately 11 minutes, stop the Oscillograph. Set all sensitivities on the Oscillograph to OFF.

+OG FRICTION TEST

16. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing

i. VERB 24 NOUN 01 ENTR
j. 00405 ENTR
k. Observe VERB 21 NOUN 01 Flashing
l. 40001 ENTR
m. Observe VERB 22 NOUN 01 Flashing
n. 40000 ENTR

17. Set the sensitivities on the Oscillograph Amplifier as follows:

a. CHANNEL 3 to 10 MV/MM
b. CHANNEL 4 to 0.2 V/CM
c. CHANNEL 5 to 10 MV/MM

18. Press CHART SPEEDS 1 pushbutton on the Oscillograph Control panel.

NOTE: Outer Gimbal pulse torquing will start approximately 90 seconds after performance of the DSKY operations in the following step.

19. Perform the following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

SUBSYSTEM G & N SYSTEM | ASSY

When the Outer Gimbal indicator on the Gimbal Position Control panel starts to move, set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

20. When the Outer Gimbal indicator appears to stop, in approximately 11 minutes, stop the Oscillograph and record the maximum amplitude (neglect spikes) of CHANNELS 3 and 5. Using the equation given in Figure 1, calculate from the Oscillograph chart the maximum amplitude of CHANNEL 4. Record on data sheet. Set all sensitivities on the Oscillograph Amplifiers to OFF.

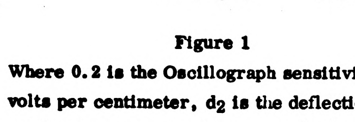

Figure 1

Where 0.2 is the Oscillograph sensitivity in volts per centimeter, d_2 is the deflection in centimeters measured from zero reference to the maximum peak deflection, and d_1 is the deflection in centimeters measured from zero reference to the minimum peak deflection as shown above.

-IG FRICTION TEST

21. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. VERB 24 NOUN 01 ENTR
j. 00407 ENTR
k. Observe VERB 21 NOUN 01 Flashing
m. 37776 ENTR
n. Observe VERB 22 NOUN 01 Flashing
o. 37777 ENTR

22. Remove the jumper from TB1-45 of TPA #2 and place it on TB2-31 of TPA #2.

23. Remove the jumper from TB2-35 of TPA #2 and place it on TB2-47 of TPA #2.

24. Set CHANNEL 1 on the Oscillograph Signal Selector panel to 5 and CHANNEL 4 and 5 to AUX and monitor the following signals:

a. IG CDU Fine Error on CHANNEL 1
b. IG TM Current on CHANNEL 4
c. IG CDU Coarse Error on CHANNEL 5.

25. Insure that the CH4DC and CH5AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

26. Set the sensitivities on the Oscillograph Amplifier as follows:

a. CHANNEL 1 to 5 MV/MM
b. CHANNEL 4 to 0.2 V/CM
c. CHANNEL 5 to 50 MV/MM

27. Press CHART SPEEDS 1 pushbutton on the Oscillograph Control panel.

NOTE: Inner Gimbal Pulse torquing will start approximately 90 seconds after performance of the DSKY operations in the following step.

28. Perform the following DSKY operations:

a. VERB 42		ENTR
b. VERB 33		ENTR

When the Inner Gimbal indicator on the Gimbal Position Control panel starts to move, set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

29. When the Inner Gimbal Indicator appears to stop, in approximately 11 minutes, stop the Oscillograph. Set all sensitivities on the Oscillograph to OFF.

+IG FRICTION TEST

30. Perform the following DSKY operations:

IG STEP RESPONSE

53. Set the following controls on the Oscillograph Signal Selector panel to monitor the associated signals:

	CHANNEL Position	Signal
a.	1-2	IG & Y Gyro Error Signal
b.	2-2	MG Error Signal
c.	3-2	OG Error Signal

54. Insure that CH3AC pushbutton on the Oscillograph Signal Selector panel is lighted.

55. Press the CHART SPEEDS 100 pushbutton on the Oscillograph Control panel and set the following channel sensitivities on the Oscillograph Amplifier panel:

a. CHANNEL 1 to 50 MV/MM

b. CHANNEL 2 to 10 MV/MM

c. CHANNEL 3 to 10 MV/MM

56. Set the PHASE SHIFT SELECTOR on the Phase Sensitive Demodulators of CHANNELS 1, 2, and 3 to 3200 ~ 0 DEG. Set the FILTER switches to HI.

57. Apply the 10^V step input to the IG TDA test input by connecting a jumper between TB5-27 of TPA #2 and TB2-11 of TPA #2.

58. Perform the following DSKY operations:

a. VERB 41	NOUN 20	ENTR
b. Observe VERB 21	NOUN 22	Flashing
c. +00000		ENTR
d. Observe VERB 22	NOUN 22	Flashing

- g. +00000 ENTR
- h. Observe VERB 41 NOUN 22 Displayed
- i. Wait 60 seconds
- j. VERB 36 ENTR

66. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

67. Set and hold the SERVO TEST switch on the TPA #2 in the up position.

68. After a constant servo error is observed on CHANNEL 2 of the Oscillograph, release the SERVO TEST switch and stop the Oscillograph.

69. Determine and record the number of error signal oscillation peaks outside ±1 mm of the final value. (See Figure 2.) Record magnitude A. Record the time t_f for the error signal to reach and stay within 1 mm of its final value.

OG STEP RESPONSE

70. Set the sensitivities on the Oscillograph Amplifier panel as follows:

- a. CHANNEL 1 to 10 MV/MM
- b. CHANNEL 2 to 10 MV/MM
- c. CHANNEL 3 to 20 MV/MM

71. Connect the 5^V step input to the OG TDA test input by removing the jumper of step 64 and connecting it between TB5-18 of TPA #2 and TB2-4 of TPA #2.

72. Perform the following DSKY operations:

- a. VERB 41 NOUN 20 ENTR
- b. Observe VERB 21 NOUN 22 Flashing
- c. +00000 ENTR
- d. Observe VERB 22 NOUN 22 Flashing
- e. +00000 ENTR
- f. Observe VERB 23 NOUN 22 Flashing
- g. +00000 ENTR
- h. Observe VERB 41 NOUN 22 Displayed
- i. Wait 60 seconds
- j. VERB 36 ENTR

73. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

74. Set and hold the SERVO TEST switch on the TPA #2 in the up position.

75. After a constant servo error is observed on CHANNEL 3 of the Oscillograph, release the SERVO TEST switch and stop the Oscillograph.

76. Determine and record the number of error signal oscillation peaks outside ±1 mm of the final value. (See Figure 2.) Record magnitude A. Record the time t_f for the error signal to reach and stay within 1 mm of its final value. Remove jumpers connected in step 71.

NORMALIZATION OF SYSTEM

77. Perform the following DSKY operations:

- a. VERB 36 ENTR

JOB GIMBAL RESPONSE TEST

JDC 12220 **REV.** D **PAGE** 1 **OF** 10

INITIAL TDRR 29882 **D.S. PGS** 2

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION A gimbal friction test is performed by driving the Outer and Inner gimbals through plus and minus 360°, one at a time, and the Middle gimbal through 135°. During the slew periods the Fine and Coarse CDU errors and gimbal torque motor current are monitored (continued below)

IMPORTANT Insure that connector assembly (2003099) is connected to CGC test connector.

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION (cont) on the Oscillograph. After the gimbal friction test, the OG, MG and IG stab loop responses are tested by providing a step input to each DC Stab Amp.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Connect 28 VDC IMU Operate Bus A to DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 173.

3. Measure and record bus voltage. If necessary, adjust G&N POWER ADJUST control on Test Control panel until DVM indicates 28.8 (±0.5) vdc.

4. Insure that the Inner, Middle and Outer gimbals are set to 0.0° as indicated on the Gimbal Position Control panel. If not, perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. Wait 60 seconds
j. VERB 36 ENTR
k. VERB 40 NOUN 20 ENTR

4A. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 00362 ENTR
c. 16002 ENTR

VERIFICATION WITH SIDL REQUIRED BEFORE USE

STATIC LOOP PARAMETERS

5. Connect the 28V 3200 cps feedback signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 123.

6. Set REFERENCE switch to 4.

7. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of PHASE GENERATOR 3200 CPS control. Choose the position closest to 0°.)

8. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

9. Connect IG error signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 135.

10. Set Signal Generator for a square wave of full amplitude and 0.01 cps.

11. Set Gimbal Servo Test selector on Test Selector panel to 1.

12. Apply square wave input to IG loop by pressing TEST START pushbutton on Test Selector panel.

13. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°).

14. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

15. When signal on Dual Beam Oscilloscope changes phase, adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

16. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

17. Remove input from IG loop by pressing TEST STOP pushbutton on Test Selector panel.

18. Calculate the average of the values obtained in steps 14 and 16. Subtract the value recorded in step 8 from the average and record result.

19. Set PAVM to the phase angle value recorded in step 18.

20. Read and record the voltage indicated on PAVM as the IG error in-phase null.

21. Repeat steps 9 through 19 using Gimbal Servo Test position 2 and CROSSBAR CONTROL position 134.

22. Read and record the voltage indicated on PAVM as the MG error in-phase null.

23. Repeat steps 9 through 19 using Gimbal Servo Test position 3 and CROSSBAR CONTROL position 133.

24. Read and record the voltage indicated on PAVM as the OG error in-phase null.

---

25. Set the Primary Signal Selector panel to monitor the following signals on the PAVM. Record the total voltage value of each:

Voltage	CROSSBAR CONTROL
a. OG TDA	136
b. MG TDA	137
c. IG TDA	138

-OG FRICTION

JOB GIMBAL RESPONSE TEST

JDC 12220 REV. F PAGE 1 OF 11

INITIAL TDRR 29882 D.S. PGS. 4

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION A gimbal friction test is performed by driving the Outer and Inner gimbals through plus and minus 360°, one at a time, and the Middle gimbal through 135°. During the slew periods the Fine and Coarse CDU errors and gimbal torque motor current are monitored (continued below)

VERIFICATION WITH SIDL REQUIRED BEFORE USE

STATIC LOOP PARAMETERS

5. Connect the 28V 3200 cps feedback signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 123.

6. Set REFERENCE switch to 4.

7. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of PHASE GENERATOR 3200 CPS control. Choose the position closest to 0°.)

8. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

9. Connect IG error signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 135.

10. Set Signal Generator for a square wave of full amplitude and 0.01 cps.

11. Set Gimbal Servo Test selector on Test Selector panel to 1 and press to light GIMBAL SERVO TEST pushbutton.

12. Apply square wave input to IG loop by pressing TEST START pushbutton on Test Selector panel.

13. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°).

14. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

15. When signal on Dual Beam Oscilloscope changes phase, adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

16. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

17. Remove input from IG loop by pressing TEST STOP pushbutton on Test Selector panel.

18. Calculate the average of the values obtained in steps 14 and 16. Subtract the value recorded in step 8 from the average and record result.

19. Set PAVM to the phase angle value recorded in step 18.

20. Read and record the voltage indicated on PAVM as the IG error in-phase null.

21. Repeat steps 9 through 19 using Gimbal Servo Test position 2 and CROSSBAR CONTROL position 134.

22. Read and record the voltage indicated on PAVM as the MG error in-phase null.

23. Repeat steps 9 through 19 using Gimbal Servo Test position 3 and CROSSBAR CONTROL position 133.

24. Read and record the voltage indicated on PAVM as the OG error in-phase null. ______

---

25. Set the Primary Signal Selector panel to monitor the following signals on the PAVM. Record the total voltage value of each:

Voltage	CROSSBAR CONTROL
a. OG TDA	136
b. MG TDA	137
c. IG TDA	138

-OG FRICTION

26. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. VERB 24 NOUN 01 ENTR
j. 00405 ENTR
k. Observe VERB 21 NOUN 01 Flashing
l. 37776 ENTR
m. Observe VERB 22 NOUN 01 Flashing
n. 37777 ENTR

27. Place jumpers between the following points:

GSE	From	To
AIP	DIRECT PROBES OUTPUT	CH4DC
AIP	BUFFERED PROBES OUTPUT	CH5AC
TPA#2	DIRECT PROBE	TB1-45 (hi) 49(lo)
TPA#2	BUFFERED PROBE	TB2-35 (hi) 18(lo)

28. Set CHANNEL 3 on the Oscillograph Signal Selector panel to 5 and CHANNEL 4 and 5 to 15 and monitor the following signals:

a. OG CDU Fine Error on CHANNEL 3
b. OG TM current on CHANNEL 4
c. OG CDU Coarse Error on CHANNEL 5.

29. Insure that CH3AC, CH4DC and CH5AC pushbuttons on the Oscillograph Signal Selector panel are lighted. Insure that the PHASE SHIFT SELECTOR switches on the Oscillograph Phase Sensitive Demodulators for CHANNELS 1, 2, 3, and 5 are set to the 800 ~ 0 DEG position and the FILTER switches are set to the LO position.

---

30. Set the sensitivities on the Oscillograph Amplifier as follows:

a. CHANNEL 3 to 5 MV/MM
b. CHANNEL 4 to 0.2 V/CM
c. CHANNEL 5 to 50 MV/MM

31. Connect P2 of W65 to J15 on TPA #2 and set the IRIG SCALE FACTOR switch on the TPA #2 to 1.

32. Press CHART SPEEDS 1 pushbutton on the Oscillograph Control panel.

NOTE: Outer Gimbal pulse torquing will start approximately 90 seconds after performance of the DSKY operations in the following step.

33. Perform the following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

When the Outer Gimbal indicator on the Gimbal Position Control panel starts to move, set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC and measure and record the GYRO PVR output on the Current Source Monitor panel per JDC 18016.

34. When the Outer Gimbal Indicator appears to stop, in approximately 11 minutes, stop the Oscillograph. Set all sensitivities on the Oscillograph to OFF.

+OG FRICTION TEST

35. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing

IG STEP RESPONSE

72. Set the following controls on the Oscillograph Signal Selector panel to monitor the associated signals:

	CHANNEL Position	Signal
a.	1-2	IG & Y Gyro Error Signal

b. 2-2 MG Error Signal
c. 3-2 OG Error Signal

73. Insure that CH3AC pushbutton on the Oscillograph Signal Selector panel is lighted.

74. Press the CHART SPEEDS 100 pushbutton on the Oscillograph Control panel and set the following channel sensitivities on the Oscillograph Amplifier panel:

a. CHANNEL 1 to 50 MV/MM
b. CHANNEL 2 to 10 MV/MM
c. CHANNEL 3 to 10 MV/MM

75. Set the PHASE SHIFT SELECTOR on the Phase Sensitive Demodulators of CHANNELS 1, 2, and 3 to 3200 ~ 0 DEG. Set the FILTER switches to HI.

76. Apply the 10^V step input to the IG TDA test input by connecting a jumper between TB5-27 of TPA #2 and TB2-11 of TPA #2.

77. Perform the following DSKY operations:

a. VERB 41	NOUN 20	ENTR	
b. Observe VERB 21	NOUN 22	Flashing	
c. +00000		ENTR	
d. Observe VERB 22	NOUN 22	Flashing

i. Wait 60 seconds		
j. VERB 36		ENTR

85. Set and hold SERVO TEST switch on TPA #2 in the ON position and adjust CAL ADJ control on CHANNEL 2 Oscillograph Amplifier to obtain a step input amplitude A (see figure 2) of 20 mm. Continue holding SERVO TEST switch to ON.

86. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

87. After observing a constant servo error on CHANNEL 2 of Oscillograph, release SERVO TEST switch. Observe Oscillograph trace for an additional constant servo error then set CHART DRIVE switch to OFF.

88. Determine and record the number of error signal oscillation peaks outside ±1 mm of the final value. (See Figure 2.) Record magnitude A. Record the time t_f for the error signal to reach and stay within 1 mm of its final value.

OG STEP RESPONSE

89. Set the sensitivities on the Oscillograph Amplifier panel as follows:

a. CHANNEL 1 to 10 MV/MM
b. CHANNEL 2 to 10 MV/MM
c. CHANNEL 3 to 20 MV/MM

90. Connect the 5^V step input to the OG TDA test input by removing the jumper of step 83 and connecting it between TB5-18 of TPA #2 and TB2-4 of TPA #2.

91. Perform the following DSKY operations:

a. VERB 41	NOUN 20	ENTR
b. Observe VERB 21	NOUN 22	Flashing
c. +00000		ENTR
d. Observe VERB 22	NOUN 22	Flashing
e. +00000		ENTR
f. Observe VERB 23	NOUN 22	Flashing
g. +00000		ENTR
h. Observe VERB 41	NOUN 22	Displayed
i. Wait 60 seconds		
j. VERB 36		ENTR

92. Set and hold SERVO TEST switch on TPA #2 in the ON position and adjust CAL ADJ control on CHANNEL 3 Oscillograph Amplifier to obtain a step input amplitude A (see figure 2) of 20 mm. Continue holding SERVO TEST switch to ON.

93. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

---

94. After observing a constant servo error on CHANNEL 3 of Oscillograph, release SERVO TEST switch. Observe Oscillograph trace for an additional constant servo error then set CHART DRIVE switch to OFF.

95. Determine and record the number of error signal oscillation peaks outside ±1 mm of the final value. (See figure 2.) Record magnitude A. Record the time t_f for the error signal to reach and stay within 1 mm of its final value. Remove jumpers connected in step 90.

JOB GIMBAL RESPONSE TEST | JDC 12220 REV. G PAGE 1 OF 11
INITIAL TDRR 29882 D.S. PGS 4

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION A gimbal friction test is performed by driving the Outer and Inner gimbals through plus and minus 360°, one at a time, and the Middle gimbal through 135°. During the slew periods the Fine and Coarse CDU errors and gimbal torque motor current are monitored (continued below)

IMPORTANT Insure that connector assembly (2003099) is connected to CGC test connector.

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION (cont) on the Oscillograph. After the gimbal friction test, the OG, MG and IG stab loop responses are tested by providing a step input to each DC Stab Amp.

NOTE: Oscillograph sensitivities given in this JDC are nominal values to be used only as a guide. Operator may change sensitivities as required.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Connect 28 VDC IMU Operate Bus A to DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 173.

3. Measure and record bus voltage. If necessary, adjust G&N POWER ADJUST control on Test Control panel until DVM indicates 28.8 (±0.5) vdc.

4. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing

f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. Wait 60 seconds
j. VERB 36 ENTR
k. VERB 40 NOUN 20 ENTR

4A. Perform the following DSKY operations:

a. VERB 21 NOUN 01 ENTR

VERIFICATION WITH SIDL REQUIRED BEFORE USE

b. 00362 ENTR
c. 16002 ENTR

STATIC LOOP PARAMETERS

5. Connect the 28V 3200 cps feedback signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 123.

6. Set REFERENCE switch to 4.

7. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of PHASE GENERATOR 3200 CPS control. Choose the position closest to 0°.)

8. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

9. Connect IG error signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 135.

10. Set Signal Generator for a square wave of full amplitude and 0.01 cps.

11. Set Gimbal Servo Test selector on Test Selector panel to 1 and press to light GIMBAL SERVO TEST pushbutton.

12. Apply square wave input to IG loop by pressing TEST START pushbutton on Test Selector panel.

13. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

14. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

15. When signal on Dual Beam Oscilloscope changes phase, adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

16. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

17. Remove input from IG loop by pressing TEST STOP pushbutton on Test Selector panel.

18. Calculate the average of the values obtained in steps 14 and 16. Subtract the value recorded in step 8 from the average and record result.

19. Set PAVM to the phase angle value recorded in step 18.

20. Read and record the voltage indicated on PAVM as the IG error in-phase null.

21. Repeat steps 9 through 19 using Gimbal Servo Test position 2 and CROSSBAR CONTROL position 134.

22. Read and record the voltage indicated on PAVM as the MG error in-phase null.

23. Repeat steps 9 through 19 using Gimbal Servo Test position 3 and CROSSBAR CONTROL position 133.

24. Read and record the voltage indicated on PAVM as the OG error in-phase null.

25. Set the Primary Signal Selector panel to monitor the following signals on the PAVM. Record the total voltage value of each:

	Voltage	CROSSBAR CONTROL
a.	OG TDA	136
b.	MG TDA	137
c.	IG TDA	138

-OG FRICTION

26. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. VERB 24 NOUN 01 ENTR
j. 00405 ENTR
k. Observe VERB 21 NOUN 01 Flashing
l. 37776 ENTR
m. Observe VERB 22 NOUN 01 Flashing
n. 37777 ENTR

27. Place jumpers between the following points:

GSE	From	To
AIP	DIRECT PROBES OUTPUT	CH4DC
AIP	BUFFERED PROBES OUTPUT	CH5AC
TPA#2	DIRECT PROBE	TB1-45 (hi) 49(lo)
TPA#2	BUFFERED PROBE	TB2-35 (hi) 18(lo)

28. Set CHANNEL 3 on the Oscillograph Signal Selector panel to 5 and CHANNEL 4 and 5 to 15 and monitor the following signals:

a. OG CDU Fine Error on CHANNEL 3
b. OG TM current on CHANNEL 4
c. OG CDU Coarse Error on CHANNEL 5.

29. Insure that CH3AC, CH4DC and CH5AC pushbuttons on the Oscillograph Signal Selector panel are lighted. Insure that the PHASE SHIFT SELECTOR switches on the Oscillograph Phase Sensitive Demodulators for CHANNELS 1, 2, 3, and 5 are set to the 800 ~ 0 DEG position and the FILTER switches are set to the LO position.

30. Set the sensitivities on the Oscillograph Amplifier as follows:

a. CHANNEL 3 to 5 MV/MM
b. CHANNEL 4 to 0.2 V/CM
c. CHANNEL 5 to 50 MV/MM

31. Connect P2 of W65 to J15 on TPA #2 and set the IRIG SCALE FACTOR switch on the TPA #2 to 1.

32. Press CHART SPEEDS 1 pushbutton on the Oscillograph Control panel.

NOTE: Outer Gimbal pulse torquing will start approximately 90 seconds after performance of the DSKY operations in the following step.

33. Perform the following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

When the Outer Gimbal indicator on the Gimbal Position Control panel starts to move, set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC and measure and record the GYRO PVR output on the Current Source Monitor panel per JDC 18016.

34. When the Outer Gimbal indicator appears to stop, in approximately 11 minutes, stop the Oscillograph. Set all sensitivities on the Oscillograph to OFF.

+OG FRICTION TEST

35. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing

IG STEP RESPONSE

72. Set the following controls on the Oscillograph Signal Selector panel to monitor the associated signals:

	CHANNEL Position	Signal
a.	1-2	IG & Y Gyro Error Signal

b. 2-2 MG Error Signal

c. 3-2 OG Error Signal

73. Insure that CH3AC pushbutton on the Oscillograph Signal Selector panel is lighted.

74. Press the CHART SPEEDS 100 pushbutton on the Oscillograph Control panel and set the following channel sensitivities on the Oscillograph Amplifier panel:

a. CHANNEL 1 to 50 MV/MM

b. CHANNEL 2 to 10 MV/MM

c. CHANNEL 3 to 10 MV/MM

75. Set the PHASE SHIFT SELECTOR on the Phase Sensitive Demodulators of CHANNELS 1, 2, and 3 to 3200 ~ 0 DEG. Set the FILTER switches to HI.

76. Apply the 10^V step input to the IG TDA test input by connecting a jumper between TB5-27 of TPA #2 and TB2-11 of TPA #2.

77. Perform the following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe VERB 21	NOUN 22	Flashing
c.	+00000		ENTR
d.	Observe VERB 22	NOUN 22	Flashing

JOB GIMBAL RESPONSE TEST

INITIAL TDRR 29882 D.S. PGS 4

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION A gimbal friction test is performed by driving the Outer and Inner gimbals through plus and minus 360°, one at a time, and the Middle gimbal through 135°. During the slew periods the Fine and Coarse CDU errors and gimbal torque motor currents are monitored on the Oscillograph. After the gimbal friction test, the OG, MG, and IG stabilization loop responses are tested by providing a step input to each DC stabilization amplifier.

TOOLS AND MATERIAL: JDC 12220 CTS UPLINK Tape P/N 2901650 -001

NOTE: Prepare the CGC for the UPLINK code by establishing the following conditions on the CTS:

a. Connect Self Test Assembly, 2014392, to Buffer Box Assembly, 2014254, by connecting P1 to J4, P2 to J5, P3 to J6, and P4 to J10.

b. Connect Buffer Box Assembly to CTS by connecting W236 P1 to J1 on Buffer Box and P2 to J5 on CTS, W237 P1 to J2 on Buffer Box and P2 to J11 on CTS, W238 P1 to J3 on Buffer Box and P2 to J17 on CTS, and W239 P1 to J9 on Buffer Box and P2 to J18 on CTS.

c. Set digitswitches on Self Test Assembly to 00000.

d. Self Test Panel -
Press to light SELF TEST pushbutton.

e. Tape Reader -
Set Power switch to ON. Load the CTS UPLINK tape.

f. Programmer and Monitor panel -
Press to light AGC INPUT-CTR and TAPE FREE RUN pushbuttons.

g. RDC Interface panel -
Press to light CH33-10 pushbutton.

h. XY Interface panel -
Press to light POSITIVE, NEGATIVE, and TAPE READER pushbuttons. Set AGC INPUT COUNTERS switch to 9.

MANUAL LOAD PROCEDURES

CTS UPLINK TAPE LOAD PROCEDURES

1. Programmer and Monitor panel -
Press EXECUTE pushbutton. Verify that tape advances to beginning of first UPLINK code. Press EXECUTE pushbutton.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Connect 28 VDC IMU Operate Bus A to Digital Voltmeter (DVM) by setting CROSSBAR CONTROL on Primary Signal Selector panel to 173.

3. Measure and record bus voltage. If necessary, adjust G&N POWER ADJUST control on Test Control panel until DVM indicates 28.8 (±0.5) vdc.

4. Perform following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe		
	VERB 21	NOUN 22	Flashing
c.	+00000		ENTR
d.	Observe		
	VERB 22	NOUN 22	Flashing
e.	+00000		ENTR
f.	Observe		
	VERB 23	NOUN 22	Flashing
g.	+00000		ENTR
h.	Observe		
	VERB 41	NOUN 22	Displayed
i.	Wait 60 seconds		
j.	VERB 36		ENTR
k.	VERB 40	NOUN 20	ENTR

4. Press EXECUTE pushbutton on Programmer and Monitor panel.

4A. When VERB 21 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

4B. When VERB 22 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

4C. When VERB 23 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

4D. Wait 60 seconds after VERB 41 NOUN 22 are displayed on DSKY and then press EXECUTE pushbutton on Programmer and Monitor panel.

STATIC LOOP PARAMETERS

6. Connect the 28V 3200 cps feedback signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 123.

7. Set REFERENCE switch to 4.

8. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of PHASE GENERATOR 3200 CPS control. Choose the position closest to 0°.)

9. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

10. Connect IG error signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 135.

11. Set Signal Generator for a square wave of full amplitude and 0.01 cps.

12. Set GIMBAL SERVO TEST switch on Test Selector panel to 1 and press to light GIMBAL SERVO TEST pushbutton.

13. Apply square wave input to IG loop by pressing TEST START pushbutton on Test Selector panel.

95. When Middle Gimbal indicator on Gimbal Position Control panel starts to move, set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

96. When Middle Gimbal indicator appears to stop, in approximately 4 minutes, set CHART DRIVE switch on Oscillograph Control panel to OFF. Record the maximum amplitude (neglect spikes) of Channels 2 and 5. Using the equation given in Figure 1, calculate from the Oscillograph chart the maximum amplitude of Channel 4. Record on data sheet. Set all sensitivities on Oscillograph Amplifiers to OFF.

97. Remove all jumper cables installed during this procedure.

MANUAL LOAD PROCEDURES

98. Perform following DSKY operations:

a.	VERB 41	NOUN 20	ENTR

CTS UPLINK TAPE LOAD PROCEDURES

98. Press EXECUTE pushbutton on Programmer and Monitor panel.

98A. When VERB 21 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

98B. When VERB 22 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

98C. When VERB 23 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel. Observe that VERB 41 NOUN 22 are displayed on DSKY.

IG STEP RESPONSE

99. Set CHANNEL 1, 2, and 3 switches on Oscillograph Signal Selector panel to 2 to monitor following signals:

a. IG&Y Gyro error signal on Channel 1
b. MG error signal on Channel 2
c. OG error signal on Channel 3.

100. Insure that CH3AC pushbutton on Oscillograph Signal Selector panel is lighted.

101. Press CHART SPEEDS 100 pushbutton on Oscillograph Control panel and set sensitivities on Oscillograph Amplifiers as follows:

a. CHANNEL 1 to 50 MV/MM
b. CHANNEL 2 to 10 MV/MM
c. CHANNEL 3 to 10 MV/MM.

MANUAL LOAD PROCEDURES | CTS UPLINK TAPE LOAD PROCEDURES

102. Set PHASE SHIFT SELECTOR on Phase Sensitive Demodulators of CHANNELS 1, 2, and 3 to 3200 ~ 0 DEG and set FILTER switches to HI.

103. Apply the 10V step input to the IG TDA test input by connecting a jumper between TB5-27 and TB2-11 on TPA#2.

104. Perform following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe		
	VERB 21	NOUN 22	Flashing
c.	+00000		ENTR
d.	Observe		
	VERB 22	NOUN 22	Flashing
e.	+00000		ENTR
f.	Observe

JOB GIMBAL RESPONSE TEST | JDC 12220 REV. J PAGE 1 OF 27
INITIAL TDRR 29882 D.S. PGS 4

SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION A gimbal friction test is performed by driving the Outer and Inner gimbals through plus and minus 360°, one at a time, and the Middle gimbal through 135°. During the slew periods the Fine and Coarse CDU errors and gimbal torque motor currents are monitored on the Oscillograph. After the gimbal friction test, the OG, MG, and IG stabilization loop responses are tested by providing a step input to each DC stabilization amplifier.

STATIC LOOP PARAMETERS

6. Connect the 28V 3200 cps feedback signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 123.

7. Set REFERENCE switch to 4.

8. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of PHASE GENERATOR 3200 CPS control. Choose the position closest to 0°.)

9. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

10. Connect IG error signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 135.

11. Set Signal Generator for a square wave of full amplitude and 0.01 cps.

12. Set GIMBAL SERVO TEST switch on Test Selector panel to 1 and press to light GIMBAL SERVO TEST pushbutton.

13. Apply square wave input to IG loop by pressing TEST START pushbutton on Test Selector panel.

DATE 30 JUN 66

14. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

15. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

16. When signal on Dual Beam Oscilloscope changes phase, adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

17. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

18. Remove input from IG loop by pressing TEST STOP pushbutton on Test Selector panel.

19. Calculate the average of the values obtained in steps 15 and 17. Subtract the value recorded in step 9 from the average and record result.

20. Set PAVM to the phase angle value recorded in step 19.

21. Measure and record the voltage indicated on PAVM as the IG error in-phase null.

22. Connect MG error signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 134.

---

23. Insure that Signal Generator is set for a square wave of full amplitude and 0.01 cps.

24. Set GIMBAL SERVO TEST switch on Test Selector panel to 2.

25. Apply square wave input to MG loop by pressing TEST START pushbutton on Test Selector panel.

26. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°).

27. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

28. When signal on Dual Beam Oscilloscope changes phase, adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

29. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

30. Remove input from MG loop by pressing TEST STOP pushbutton on Test Selector panel.

---

31. Calculate the average of the values obtained in steps 27 and 29. Subtract the value recorded in step 9 from the average and record result.

32. Set PAVM to the phase angle value recorded in step 31.

33. Measure and record the voltage indicated on PAVM as the MG error in-phase null.

34. Connect OG error signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 133.

35. Insure that Signal Generator is set for a square wave of full amplitude and 0.01 cps.

36. Set GIMBAL SERVO TEST switch on Test Selector panel to 3.

37. Apply square wave input to OG loop by pressing TEST START pushbutton on Test Selector panel.

38. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

39. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

40. When signal on Dual Beam Oscilloscope changes phase, adjust PHASE GENERATOR 3200 CPS control on Oscillograph

---

Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions on the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

41. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

42. Remove input from OG loop by pressing TEST STOP pushbutton on Test Selector panel.

43. Calculate the average of the values obtained in steps 39 and 41. Subtract the value recorded in step 9 from the average and record result.

44. Set PAVM to the phase angle value recorded in step 43.

45. Measure and record the voltage indicated on PAVM as the OG error in-phase null.

46. Set CROSSBAR CONTROL on Primary Signal Selector panel to following positions to monitor the corresponding voltages. Record the total voltage value of each:

	CROSSBAR CONTROL	Voltage
a.	136	OG TDA
b.	137	MG TDA
c.	138	IG TDA

JOB GIMBAL RESPONSE TEST

JDC 12220 **REV.** K **PAGE** 1 **OF** 27

INITIAL TDRR 29882 **D.S. PGS** 4

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION A gimbal friction test is performed by driving the Outer and Inner gimbals through plus and minus 360°, one at a time, and the Middle gimbal through 135°. During the slew periods the Fine and Coarse CDU errors and gimbal torque motor currents are monitored on the Oscillograph. After the gimbal friction test, the OG, MG, and IG stabilization loop responses are tested by providing a step input to each DC stabilization amplifier.

See appropriate section of JDC

IMPORTANT: Insure that cable W226 is removed and connector assembly (2003099) is connected to CGC test connector before proceeding.

NOTE: This JDC contains two separate procedures. Perform the procedures contained in the right column of each page if a CTS UPLINK tape is being used. Perform the procedures contained in the left column of each page if a CTS UPLINK tape is NOT being used. Do not interchange steps of columns.

The UPLINK ACTY lamp on the DSKY will light during performance of the CTS UPLINK Tape Load Procedures.

and TAPE READER pushbuttons. Set AGC INPUT COUNTERS switch to 9.

i. Programmer and Monitor panel -
Press EXECUTE pushbutton. Verify that tape advances to beginning of first UPLINK code. Press EXECUTE pushbutton.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition.

2. Connect 28 VDC IMU Operate Bus A to Digital Voltmeter (DVM) by setting CROSSBAR CONTROL on Primary Signal Selector panel to 173.

3. Measure and record bus voltage. If necessary, adjust G&N POWER ADJUST control on Test Control panel until DVM indicates 28.8 (±0.5) vdc.

4. Perform following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe		
	VERB 21	NOUN 22	Flashing
c.	+00000		ENTR
d.	Observe		
	VERB 22	NOUN 22	Flashing
e.	+00000		ENTR
f.	Observe		
	VERB 23	NOUN 22	Flashing
g.	+00000		ENTR
h.	Observe		
	VERB 41	NOUN 22	Displayed
i.	Wait 60 seconds		
j.	VERB 36		ENTR
k.	VERB 40	NOUN 20	ENTR

4. Press EXECUTE pushbutton on Programmer and Monitor panel.

4A. When VERB 21 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

4B. When VERB 22 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

4C. When VERB 23 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

4D. Wait 60 seconds after VERB 41 NOUN 22 are displayed on DSKY and then press EXECUTE pushbutton on Programmer and Monitor panel.

STATIC LOOP PARAMETERS

6. Connect the 28V 3200 cps feedback signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 123.

7. Set REFERENCE switch to 4.

8. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of PHASE GENERATOR 3200 CPS control. Choose the position closest to 0°.)

9. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

10. Connect IG error signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 135.

11. Set Signal Generator for a square wave of full amplitude and 0.01 cps.

12. Set GIMBAL SERVO TEST switch on Test Selector panel to 1 and press to light GIMBAL SERVO TEST pushbutton.

13. Apply square wave input to IG loop by pressing TEST START pushbutton on Test Selector panel.

DATE 30 JUN 66

MANUAL LOAD PROCEDURES | CTS UPLINK TAPE LOAD PROCEDURES

14. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

15. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

16. When signal on Dual Beam Oscilloscope changes phase, adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

17. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

18. Remove input from IG loop by pressing TEST STOP pushbutton on Test Selector panel.

19. Calculate the average of the values obtained in steps 15 and 17. Subtract the value recorded in step 9 from the average and record result.

20. Set PAVM to the phase angle value recorded in step 19.

21. Measure and record the voltage indicated on PAVM as the IG error in-phase null.

22. Connect MG error signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 134.

MANUAL LOAD PROCEDURES | CTS UPLINK TAPE LOAD PROCEDURES

23. Insure that Signal Generator is set for a square wave of full amplitude and 0.01 cps.

24. Set GIMBAL SERVO TEST switch on Test Selector panel to 2.

25. Apply square wave input to MG loop by pressing TEST START pushbutton on Test Selector panel.

26. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°).

27. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

28. When signal on Dual Beam Oscilloscope changes phase, adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

29. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

30. Remove input from MG loop by pressing TEST STOP pushbutton on Test Selector panel.

MANUAL LOAD PROCEDURES | CTS UPLINK TAPE LOAD PROCEDURES

31. Calculate the average of the values obtained in steps 27 and 29. Subtract the value recorded in step 9 from the average and record result.

32. Set PAVM to the phase angle value recorded in step 31.

33. Measure and record the voltage indicated on PAVM as the MG error in-phase null.

34. Connect OG error signal to Dual Beam Oscilloscope by setting CROSSBAR CONTROL on Primary Signal Selector panel to 133.

35. Insure that Signal Generator is set for a square wave of full amplitude and 0.01 cps.

36. Set GIMBAL SERVO TEST switch on Test Selector panel to 3.

37. Apply square wave input to OG loop by pressing TEST START pushbutton on Test Selector panel.

38. Adjust PHASE GENERATOR 3200 CPS control on Oscillograph Signal Selector panel until phase shift of signal on Dual Beam Oscilloscope is zero. (This condition can be obtained at two positions of the PHASE GENERATOR 3200 CPS control. Choose the position closest to 270°.)

39. Record value of phase shift indicated on PHASE GENERATOR 3200 CPS readout.

40. When signal on Dual Beam Oscilloscope changes phase, adjust PHASE GENERATOR 3200 CPS control on Oscillograph

79. Press EXECUTE pushbutton on Programmer and Monitor panel.

79A. When VERB 21 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

79B. When VERB 22 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

79C. When VERB 23 NOUN 22 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

79D. When VERB 41 NOUN 22 are displayed on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

79E. When VERB 21 NOUN 01 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

79F. When VERB 22 NOUN 01 flash on DSKY, press EXECUTE pushbutton on Programmer and Monitor panel.

80. The GIMBAL LOCK CAUTION lamp on the Monitor panel shall be lighted.

81. Remove the jumper from TB2-31 of TPA#2 and connect it to TB2-32 of TPA#2.

---

82. Remove the jumper from TB2-47 of TPA#2 and connect it to TB2-41 of TPA#2.

83. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 5 and CHANNEL 4 and 5 switches to 15 to monitor following signals:

a. MG CDU Fine Error on Channel 2
b. MG TM Current on Channel 4
c. MG CDU Coarse Error on Channel 5.

84. Insure that CH4DC and CH5AC pushbuttons on Oscillograph Signal Selector panel are lighted.

NOTE: Middle gimbal pulse torquing will start approximately 90 seconds after performance of DSKY operations in step 85. Perform steps 86 and 87 during this time.

85. Perform following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

NOTE: Middle gimbal pulse torquing will start approximately 90 seconds after pressing EXECUTE pushbutton in step 85. Perform steps 86 and 87 during this time.

85. Press EXECUTE pushbutton on Programmer and Monitor panel.

86. Set sensitivities on Oscillograph Amplifiers as follows:

a. CHANNEL 2 to 5 MV/MM
b. CHANNEL 4 to 0.2 V/CM
c. CHANNEL 5 to 50 MV/MM.

87. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel.

88. When Middle Gimbal indicator on Gimbal Position Control panel starts to move, set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

---

89. When Middle Gimbal indicator appears to stop, in approximately 4 minutes, set CHART DRIVE switch on Oscillograph Control panel to OFF. Set all sensitivities on Oscillograph Amplifiers to OFF.

JOB GIMBAL RESPONSE TEST

JDC 12220 REV. - PAGE 1 OF 9

INITIAL TDRR 29882 D.S. PGS 2

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION A gimbal friction test is performed by driving the Outer and Inner gimbals through plus and minus 360°, one at a time, and the Middle gimbal through 135°. During the slew periods the Fine and Coarse CDU errors and gimbal torque motor current are monitored (continued below)

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION (cont) on the Oscillograph. After the gimbal friction test, the OG, MG and IG stab loop responses are tested by providing a step input to each DC Stab Amp.

IMPORTANT: 1. All starred (**) parameters on the Data Sheet must be corrected by the multiplication factor found on the signal identification drawings to obtain the true value.

2. The OSCILLOGRAPH sensitivities called out in this JDC are initial values. Operators may change sensitivities as required for optimum resolution.

INITIALIZATION

1. Establish a MASTER INITIALIZATION condition.

2. Set the CROSSBAR CONTROL on the Primary Signal Selector to panel to 220.

3. Measure the 28 VDC Bus voltage indicated on the DVM. Record the indication.

4. Insure that the Inner, Middle and Outer gimbals are set to 0.0° as indicated on the Gimbal Position Control panel. If not, perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR

b. Observe VERB 21 NOUN 22 Flashing

c. +00000 ENTR

27. Set the chart speed to 1 on the Oscillograph Control panel.

NOTE: Inner Gimbal Pulse torquing will start approximately 90 seconds after performance of the DSKY operations in the following step.

28. Perform the following DSKY operations:

a. VERB 42 ENTR

b. VERB 33 ENTR

DATE __________

JOB GIMBAL RESPONSE TEST | JDC 12220 REV | PAGE 5 OF 9
SUBSYSTEM G & N SYSTEM | ASSY

When the Inner Gimbal indicator on the Gimbal Position Control panel starts to move, set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

29. When the Inner Gimbal Indicator appears to stop, in approximately 11 minutes, stop the Oscillograph. Set all sensitivities on the Oscillograph to OFF.

+IG FRICTION TEST

30. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. VERB 24 NOUN 01 ENTR
j. 00407 ENTR
k. Observe VERB 21 NOUN 01 Flashing
l. 40001 ENTR
m. Observe VERB 22 NOUN 01 Flashing
n. 40000 ENTR

31. Set the sensitivities on the Oscillograph Amplifier as follows:

a. CHANNEL 1 to 5 MV/MM
b. CHANNEL 4 to .1 V/CM
c. CHANNEL 5 to 50 MV/MM

32. Set the chart speed to 1 on the Oscillograph Control panel.

NOTE: Inner Gimbal Pulse torquing will start approximately 90 seconds after performance of the DSKY operations in the following step.

33. Perform the following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

When the Inner Gimbal indicator on the Gimbal Position Control panel starts to move, set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

34. When the Inner Gimbal Indicator appears to stop, in approximately 11 minutes, stop the Oscillograph and record the maximum amplitude (neglect spikes) of CHANNELS 1, 4 and 5 on the data sheets. Set all sensitivities on the Oscillograph Amplifier to OFF.

-MG FRICTION TEST

35. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR

m. Observe VERB 22 NOUN 01 Flashing
n. 00000 ENTR

36. The GIMBAL LOCK CAUTION lamp on the Monitor panel shall light.

37. Remove the jumper from TB2-31 of TPA #2 and place it on TB2-32 of TPA #2.

38. Remove the jumper from TB2-47 of TPA #2 and place it on TB2-41 of TPA #2.

39. Set CHANNEL 2 on the Oscillograph Signal Selector panel to 5 and CHANNEL 4 and 5 to AUX and monitor the following signals:

a. MG CDU Fine Error on CHANNEL 2
b. MG TM Current on CHANNEL 4
c. MG CDU Coarse Error on CHANNEL 5

40. Insure that the CH4DC and CH5AC pushbuttons on the Oscillograph Signal Selector panel are lighted.

41. Set the sensitivities on the Oscillograph Amplifiers as follows:

a. CHANNEL 2 to 5 MV/MM
b. CHANNEL 4 to .1 V/CM
c. CHANNEL 5 to 50 MV/MM

42. Set the chart speed to 1 on the Oscillograph Control panel.

NOTE: Middle Gimbal pulse torquing will start approximately 90 seconds after performance of the DSKY operations in the following step.

43. Perform the following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

When the Middle Gimbal indicator on the Gimbal Position Control panel starts to move, set the CHART DRIVE switch on the Oscillograph Control panel to MM/SEC.

44. When the Middle Gimbal Indicator appears to stop, in approximately 4 minutes, stop the Oscillograph. Set all sensitivities on the Oscillograph to OFF.

+MG FRICTION TEST

45. Perform the following DSKY operations:

IG STEP RESPONSE

53. Set the following controls on the Oscillograph Signal Selector panel to monitor the associated signals:

	CHANNEL Position	Signal
a.	1-2	IG & Y Gyro Error Signal
b.	2-2	MG Error Signal
c.	3-2	OG Error Signal

54. Insure that CH3AC pushbutton on the Oscillograph Signal Selector panel is lighted.

55. Press the CHART SPEEDS 100 pushbutton on the Oscillograph Control panel and set the following channel sensitivities on the Oscillograph Amplifier panel:

a. CHANNEL 1 to 50 MV/MM

DATE ________

JOB GIMBAL RESPONSE TEST | JDC 12220 REV | PAGE 8 OF 9
SUBSYSTEM G & N SYSTEM | ASSY

b. CHANNEL 2 to 10 MV/MM
c. CHANNEL 3 to 10 MV/MM

56. Set the PHASE SHIFT SELECTOR on the phase sensitive Demodulators of CHANNELS 1, 2 and 3 to 3200~ 0 deg.

57. Connect a jumper between TB5-27 of TPA #2 and TB2-11 of TPA #2.

58. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. Wait 60 seconds
j. VERB 36 ENTR

59. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

60. Set and hold the SERVO TEST switch on the TPA #2 in the up position.

61. After a constant servo error is observed on CHANNEL 1 of the Oscillograph, release the SERVO TEST switch and stop the Oscillograph.

62. Record the IG stabilization loop response time on CHANNEL 1 of the Oscilloscope Chart by measuring the time interval between releasing the SERVO TEST switch and the peak magnitude of the first overshoot. In addition, record the number of overshoots after the initial disturbance.

MG STEP RESPONSE

63. Set the sensitivities on the Oscillograph Amplifier panel as follows:

a. CHANNEL 1 to 10 MV/MM
b. CHANNEL 2 to 50 MV/MM
c. CHANNEL 3 to 10 MV/MM

64. Remove the jumper of step 57 and connect between TB5-18 of TPA #2 and TB2-10 of TPA #2.

65. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. Wait 60 seconds
j. VERB 36 ENTR

66. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

67. Set and hold the SERVO TEST switch on the TPA #2 in the up position.

68. After a constant servo error is observed on CHANNEL 2 of the Oscillograph, release the SERVO TEST switch and stop the Oscillograph.

DATE ________

JOB GIMBAL RESPONSE TEST | JDC 12220 REV | PAGE 9 OF 9

SUBSYSTEM G & N SYSTEM | ASSY

69. Record the MG stabilization loop response time on CHANNEL 2 of the Oscillograph Chart by measuring the time interval between releasing the SERVO TEST switch and the peak magnitude of the first overshoot. In addition, record the number of overshoots after the initial disturbance.

OG STEP RESPONSE

70. Set the sensitivities on the Oscillograph Amplifier panel as follows:

a. CHANNEL 1 to 10 MV/MM
b. CHANNEL 2 to 10 MV/MM
c. CHANNEL 3 to 50 MV/MM

71. Remove the jumper of step 64 and connect between TB5-18 of TPA #2 and TB2-4 of TPA #2.

72. Perform the following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe VERB 23 NOUN 22 Flashing
g. +00000 ENTR
h. Observe VERB 41 NOUN 22 Displayed
i. Wait 60 seconds
j. VERB 36 ENTR

73. Start the Oscillograph by setting the CHART DRIVE switch to MM/SEC.

74. Set and hold the SERVO TEST switch on the TPA #2 in the up position.

75. After a constant servo error is observed on CHANNEL 3 of the Oscillograph, release the SERVO TEST switch and stop the Oscillograph.

76. Record the OG stabilization loop response time on CHANNEL 3 of the Oscillograph Chart by measuring the time interval between releasing the SERVO TEST switch and the peak magnitude of the first overshoot. In addition, record the number of overshoots after the initial disturbance. Remove jumpers connected in step 71.

NORMALIZATION OF SYSTEM

77. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. Observe VERB 21 NOUN 22 Flashing

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Establish a Master Initialization Condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes to TB 4-43 (Hi) and 4-47 (Lo) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 199.

ATTITUDE ERROR (FDAI) TEST

4. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00013 ENTR
c. Observe
VERB 33 NOUN 01 Flashing
d. Observe
PROG lamp indicates 07
e. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

5. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 01 Flashing
b. Row 1 displays +00385
c. Row 2 displays -00385
d. Row 3 displays +00385
e. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

6. Press the ENTR pushbutton and

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 01 Flashing
b. Row 1 displays +00384
c. Row 2 displays -00384
d. Row 3 displays +00384

Record the voltage indication and sign.

7. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 01 Flashing
b. Row 1 displays +00160
c. Row 2 displays -00160
d. Row 3 displays +00160

Record the voltage indication and sign.

8. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 01 Flashing
b. Row 1 displays +00135
c. Row 2 displays -00135
d. Row 3 displays +00135

Record the voltage indication and sign.
Determine and record the phase angle of signal.

9. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 01 Flashing
b. Row 1 displays +00090
c. Row 2 displays -00090
d. Row 3 displays +00090

Record the voltage indication and sign.

10. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 01 Flashing
b. Row 1 displays +00000
c. Row 2 displays +00000
d. Row 3 displays -00090

Record the voltage indication and sign.

11. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 01 Flashing
b. Row 1 displays -00090
c. Row 2 displays +00090
d. Row 3 displays -00135

Record the voltage indication and sign.

12. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 01 Flashing
b. Row 1 displays -00135
c. Row 2 displays +00135
d. Row 3 displays -00160

Record the voltage indication and sign.

13. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 01 Flashing
b. Row 1 displays -00160

---

c. Row 2 displays +00160
d. Row 3 displays -00384

Record the voltage indication and sign.

14. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 01 Flashing
b. Row 1 displays -00384
c. Row 2 displays +00384
d. Row 3 displays -00385

Record the voltage indication and sign.

15. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 01 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385
d. Row 3 displays +00000

Record the voltage indication and sign.

16. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall light.

ROLL (OG) CDU DC D/A MONITOR

17. Connect the Direct Probes to TB4-34 (Hi) and 4-38 (Lo) on TPA #2 to monitor the Roll CDU DC D/A output.

18. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

19. Press the ENTR pushbutton and observe the DSKY displays the following:

a. VERB 33 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

20. Press the ENTR pushbutton and observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

21. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 33 NOUN 02 Flashing
c. Observe
Row 1 displays +00385
d. Observe
Row 2 displays -00385
e. Observe
Row 3 displays +00385
f. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

22. Repeat steps 6 through 15 measuring the voltages on the DVM rather than PAVM. Note that VERB 33 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

---

23. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 03 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

YAW TVC MONITOR

24. Connect the Direct Probes to TB 4-29 (Hi) and 4-33 (Lo) on TPA #2 to monitor the Yaw TVC output.

TVC TEST

25. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel, the CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS and the GN&C A/P CONTROL pushbutton on the Test Control panel in that order. The CH30-3/IN0-3 and GN&C A/P CONTROL pushbuttons shall light. The S/C CONTROL OF SATURN pushbutton shall not be lighted.

26. Set the OPTICS MODE selector on the Indicator Control panel to MAN.

27. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 01 NOUN 10 Flashing
b. Row 1 displays X7373
c. Row 3 displays 00030

28. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 01 NOUN 10 Flashing
c. Observe
Row 1 displays 37777
d. Observe
Row 3 displays 00031

29. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 33 NOUN 03 Flashing
c. Observe
Row 1 displays +00385
d. Observe
Row 2 displays -00385
e. Observe
Row 3 displays +00003

Record the voltage indication and sign.

NOTE: Row 3 shall display +00003 until completion of step 39.

30. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe
VERB 33 NOUN 03 Flashing
b. Row 1 displays +00384
c. Row 2 displays -00384
d. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

31. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe VERB 33 NOUN 03 Flashing
b. Row 1 displays +00160
c. Row 2 displays -00160

Record the voltage and sign indications on the DVM.

32. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe VERB 33 NOUN 03 Flashing
b. Row 1 displays +00135
c. Row 2 displays -00135

Record the voltage indication and sign.

33. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe VERB 33 NOUN 03 Flashing
b. Row 1 displays +00090
c. Row 2 displays -00090

Record the voltage indication and sign. Set the OPTICS CONTROLLER SPEED switch on the Indicator Control panel to HI.

34. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe VERB 33 NOUN 03 Flashing
b. Row 1 displays +00000
c. Row 2 displays +00000

While holding the Optics Hand Controller up and left (45°) no longer than 10 seconds, record the voltage indication and sign.

35. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe VERB 33 NOUN 03 Flashing
b. Row 1 displays -00090
c. Row 2 displays +00090

Record the voltage indication and sign. Set the OPTICS MODE switch to ZERO for 30 seconds, then return to MAN.

36. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe VERB 33 NOUN 03 Flashing
b. Row 1 displays -00135
c. Row 2 displays +00135

Record the voltage indication and sign.

37. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe VERB 33 NOUN 03 Flashing
b. Row 1 displays -00160
c. Row 2 displays +00160

Record the voltage indicator and sign.

38. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe VERB 33 NOUN 03 Flashing

---

b. Row 1 displays -00384
c. Row 2 displays +00384

Record the voltage indication and sign.

39. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe VERB 33 NOUN 03 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385

Record the voltage indication and sign.

TEST ABORT AND RESTART

40. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe PROG lamp indicates 00
c. VERB 57 ENTR
d. Observe VERB 21 NOUN 01 Flashing
e. 00013 ENTR
f. Observe VERB 33 NOUN 01 Flashing
g. Observe NO ATT lamp lights
h. Observe PROG lamp indicates 07

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

41. Press CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS. Press the GN&C A/P CONTROL pushbutton on the Test Control panel. The pushbuttons shall not be lighted.

PITCH (IG) CDU AC D/A MONITOR

42. Connect the Buffered Probes to TB 4-45 (Hi) and 4-49 (Lo) on TPA #2 to monitor the Pitch CDU AC Att Error.

43. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 99.

ATTITUDE ERROR (FDAI) TEST

44. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

PITCH (IG) CDU DC D/A MONITOR

45. Connect the Direct Probes to TB 4-36 (Hi) and 4-40 (Lo) on TPA #2 to monitor the Pitch CDU DC D/A output.

46. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

47. Press the ENTR pushbutton and observe the DSKY displays the following:

a. VERB 33 NOUN 02 Flashing
b. Observe NO ATT lamp lights

48. Enter VERB 33 and press the ENTR pushbutton and observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

---

49. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe VERB 33 NOUN 02 Flashing
c. Observe NO ATT lamp goes out
d. Observe Row 1 displays +00385
e. Observe Row 2 displays -00385
f. Observe Row 3 displays +00385

Record the voltage and sign indications on the DVM.

50. Repeat steps 6 through 15 measuring the voltages on DVM rather than PAVM. Note that VERB 33 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

51. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe VERB 33 NOUN 03 Flashing
b. Observe NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

PITCH TVC MONITOR

52. Connect the Direct Probes to TB 4-28 (Hi) and 4-32 (Lo) on TPA #2 to monitor the Pitch TVC output.

TVC TEST

53. Repeat steps 26 through 41.

YAW (MG) CDU AC D/A MONITOR

54. Connect the Buffered Probes to TB 4-44 (Hi) and 4-48 (Lo) on TPA #2 to monitor the Yaw CDU AC Att Error.

55. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99.

ATTITUDE ERROR (FDAI) TEST

56. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

YAW (MG) CDU C/A MONITOR

57. Connect the Direct Probes to TB 4-35 (Hi) and 4-39 (Lo) on TPA #2 to monitor the Yaw CDU DC D/A output.

58. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

59. Press the ENTR pushbutton and observe the DSKY displays the following:

a. Observe VERB 33 NOUN 02 Flashing
b. Observe NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

60. Press the ENTR pushbutton and observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

---

61. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe VERB 33 NOUN 02 Flashing
c. Observe NO ATT lamp goes out
d. Observe Row 1 displays +00385
e. Observe Row 2 displays -00385
f. Observe Row 3 displays +00385

Record the voltage indication and sign.

62. Repeat steps 6 through 15 measuring the voltage on DVM rather than PAVM. Note that VERB 33 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurements in step 8.

TEST ABORT

63. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall not be lighted.

64. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe NO ATT lamp is not lighted.

REFERENCES PS-2015000

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Establish a Master Initialization Condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes to TB 4-43 (Hi) and 4-47 (Lo) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 199.

ATTITUDE ERROR (FDAI) TEST

4. Perform the following DSKY operations:

a. VERB 57 ENTR

b. 00013 ENTR

c. Observe
VERB 06 NOUN 01 Flashing

d. Observe
PROG lamp indicates 07

e. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

5. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00385

c. Row 2 displays -00385

d. Row 3 displays +00385

e. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

6. Enter VERB 33 into DSKY and press

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00384

c. Row 2 displays -00384

d. Row 3 displays +00384

Record the voltage indication and sign.

7. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00160

c. Row 2 displays -00160

d. Row 3 displays +00160

Record the voltage indication and sign.

8. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00135

c. Row 2 displays -00135

d. Row 3 displays +00135

Record the voltage indication and sign. Determine and record the phase angle of signal.

9. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00090

c. Row 2 displays -00090

d. Row 3 displays +00090

Record the voltage indication and sign.

10. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00000

c. Row 2 displays +00000

d. Row 3 displays -00090

Record the voltage indication and sign.

11. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00090

c. Row 2 displays +00090

d. Row 3 displays -00135

Record the voltage indication and sign.

12. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00135

c. Row 2 displays +00135

d. Row 3 displays -00160

Record the voltage indication and sign.

13. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00160

---

c. Row 2 displays +00160

d. Row 3 displays -00384

Record the voltage indication and sign.

14. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00384

c. Row 2 displays +00384

d. Row 3 displays -00385

Record the voltage indication and sign.

15. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00385

c. Row 2 displays +00385

d. Row 3 displays +00000

Record the voltage indication and sign.

16. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall light.

ROLL (OG) CDU DC D/A MONITOR

17. Connect the Direct Probes to TB4-34 (Hi) and 4-38 (Lo) on TPA #2 to monitor the Roll CDU DC D/A output.

18. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

19. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing

b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

20. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing

b. Row 1 displays X6377

c. Row 3 displays 00030

21. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
VERB 06 NOUN 02 Flashing

c. Observe
Row 1 displays +00385

d. Observe
Row 2 displays -00385

e. Observe
Row 3 displays +00385

f. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

22. Repeat steps 6 through 15 measuring the voltages on the DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

---

23. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

YAW TVC MONITOR

24. Connect the Direct Probes to TB 4-29 (Hi) and 4-33 (Lo) on TPA #2 to monitor the Yaw TVC output.

TVC TEST

25. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel, the CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS and the GN&C A/P CONTROL pushbutton on the Test Control panel in that order. The CH30-3/IN0-3 and GN&C A/P CONTROL pushbuttons shall light. The S/C CONTROL OF SATURN pushbutton shall not be lighted.

26. Set the OPTICS MODE selector on the Indicator Control panel to MAN.

27. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 01 NOUN 10 Flashing

b. Row 1 displays X7373

c. Row 3 displays 00030

28. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
VERB 01 NOUN 10 Flashing

c. Observe
Row 1 displays 37777

d. Observe
Row 3 displays 00031

29. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
VERB 06 NOUN 03 Flashing

c. Observe
Row 1 displays +00385

d. Observe
Row 2 displays -00385

e. Observe
Row 3 displays +00003

Record the voltage indication and sign.

NOTE: Row 3 shall display +00003 until completion of step 39.

30. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Row 1 displays +00384

c. Row 2 displays -00384

d. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

31. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00160
c. Row 2 displays -00160

Record the voltage and sign indications on the DVM.

32. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00135
c. Row 2 displays -00135

Record the voltage indication and sign.

33. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00090
c. Row 2 displays -00090

Record the voltage indication and sign. Set the OPTICS CONTROLLER SPEED switch on the Indicator Control panel to HI.

34. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00000
c. Row 2 displays +00000

While holding the Optics Hand Controller up and left (45°) no longer than 10 seconds, record the voltage indication and sign.

35. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00090
c. Row 2 displays +00090

Record the voltage indication and sign. Set the OPTICS MODE switch to ZERO for 30 seconds, then return to MAN.

36. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00135
c. Row 2 displays +00135

Record the voltage indication and sign.

37. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00160
c. Row 2 displays +00160

Record the voltage indicator and sign.

38. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

---

b. Row 1 displays -00384
c. Row 2 displays +00384

Record the voltage indication and sign.

39. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385

Record the voltage indication and sign.

TEST ABORT AND RESTART

40. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
PROG lamp indicates 00
c. VERB 57 ENTR
d. Observe
VERB 21 NOUN 01 Flashing
e. 00013 ENTR
f. Observe
VERB 06 NOUN 01 Flashing
g. Observe
NO ATT lamp lights
h. Observe
PROG lamp indicates 07

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

41. Press CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS. Press the GN&C A/P CONTROL pushbutton on the Test Control panel. The pushbuttons shall not be lighted.

PITCH (IG) CDU AC D/A MONITOR

42. Connect the Buffered Probes to TB 4-45 (Hi) and 4-49 (Lo) on TPA #2 to monitor the Pitch CDU AC Att Error.

43. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 99.

ATTITUDE ERROR (FDAI) TEST

44. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

PITCH (IG) CDU DC D/A MONITOR

45. Connect the Direct Probes to TB 4-36 (Hi) and 4-40 (Lo) on TPA #2 to monitor the Pitch CDU DC D/A output.

46. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

47. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

48. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

---

49. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 02 Flashing
c. Observe
NO ATT lamp goes out
d. Observe
Row 1 displays +00385
e. Observe
Row 2 displays -00385
f. Observe
Row 3 displays +00385

Record the voltage and sign indications on the DVM.

50. Repeat steps 6 through 15 measuring the voltages on DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

51. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

PITCH TVC MONITOR

52. Connect the Direct Probes to TB 4-28 (Hi) and 4-32 (Lo) on TPA #2 to monitor the Pitch TVC output.

TVC TEST

53. Repeat steps 26 through 41.

YAW (MG) CDU AC D/A MONITOR

54. Connect the Buffered Probes to TB 4-44 (Hi) and 4-48 (Lo) on TPA #2 to monitor the Yaw CDU AC Att Error.

55. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99.

ATTITUDE ERROR (FDAI) TEST

56. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

YAW (MG) CDU C/A MONITOR

57. Connect the Direct Probes to TB 4-35 (Hi) and 4-39 (Lo) on TPA #2 to monitor the Yaw CDU DC D/A output.

58. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

59. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

60. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

---

61. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 02 Flashing
c. Observe
NO ATT lamp goes out
d. Observe
Row 1 displays +00385
e. Observe
Row 2 displays -00385
f. Observe
Row 3 displays +00385

Record the voltage indication and sign.

62. Repeat steps 6 through 15 measuring the voltage on DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurements in step 8.

TEST ABORT

63. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall not be lighted.

64. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
NO ATT lamp is not lighted.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

1. Establish a Master Initialization Condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes to TB 4-43 (Hi) and 4-47 (Lo) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 199.

ATTITUDE ERROR (FDAI) TEST

4. Perform the following DSKY operations:

a. VERB 57 ENTR

b. 00013 ENTR

c. Observe
VERB 06 NOUN 01 Flashing

d. Observe
PROG lamp indicates 07

e. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

5. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00385

c. Row 2 displays -00385

d. Row 3 displays +00385

e. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

6. Enter VERB 33 into DSKY and press

VERIFICATION WITH SIDL REQUIRED BEFORE USE

ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00384

c. Row 2 displays -00384

d. Row 3 displays +00384

Record the voltage indication and sign.

7. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00160

c. Row 2 displays -00160

d. Row 3 displays +00160

Record the voltage indication and sign.

8. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00135

c. Row 2 displays -00135

d. Row 3 displays +00135

Record the voltage indication and sign.

Determine and record the phase angle of signal.

9. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00090

c. Row 2 displays -00090

d. Row 3 displays +00090

Record the voltage indication and sign.

10. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00000

c. Row 2 displays +00000

d. Row 3 displays -00090

Record the voltage indication and sign.

11. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00090

c. Row 2 displays +00090

d. Row 3 displays -00135

Record the voltage indication and sign.

12. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00135

c. Row 2 displays +00135

d. Row 3 displays -00160

Record the voltage indication and sign.

13. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00160

b. Row 1 displays +00160

c. Row 2 displays -00160

Record the voltage and sign indications on the DVM.

32. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Row 1 displays +00135

c. Row 2 displays -00135

Record the voltage indication and sign.

33. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Row 1 displays +00090

c. Row 2 displays -00090

Record the voltage indication and sign. Set the OPTICS CONTROLLER SPEED switch on the Indicator Control panel to HI.

34. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Row 1 displays +00000

c. Row 2 displays +00000

While holding the Optics Hand Controller up and left (45°) no longer than 10 seconds, record the voltage indication and sign.

35. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Row 1 displays -00090

c. Row 2 displays +00090

Record the voltage indication and sign. Set the OPTICS MODE switch to ZERO for 30 seconds, then return to MAN. Press OPTICS POWER ON pushbutton on Test Control panel so that OPTICS POWER ON pushbutton shall go out.

36. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Row 1 displays -00135

c. Row 2 displays +00135

Record the voltage indication and sign.

37. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Row 1 displays -00160

c. Row 2 displays +00160

Record the voltage indicator and sign.

38. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

---

b. Row 1 displays -00384

c. Row 2 displays +00384

Record the voltage indication and sign.

39. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Row 1 displays -00385

c. Row 2 displays +00385

Record the voltage indication and sign.

TEST ABORT AND RESTART

40. Perform the following DSKY operations:

a. VERB 34 ENTR

b. Observe
PROG lamp indicates 00

c. VERB 57 ENTR

d. Observe
VERB 21 NOUN 01 Flashing

e. 00013 ENTR

f. Observe
VERB 06 NOUN 01 Flashing

g. Observe
NO ATT lamp lights

h. Observe
PROG lamp indicates 07

Observe the Gimbal Angles, approximately 0^{c}, are displayed on Row 1, Row 2 and Row 3.

41. Press CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS. Press the GN&C A/P CONTROL pushbutton on the Test Control panel. The pushbuttons shall not be lighted.

PITCH (IG) CDU AC D/A MONITOR

42. Connect the Buffered Probes to TB 4-45 (Hi) and 4-49 (Lo) on TPA #2 to monitor the Pitch CDU AC Att Error.

43. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 99.

ATTITUDE ERROR (FDAI) TEST

44. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

PITCH (IG) CDU DC D/A MONITOR

45. Connect the Direct Probes to TB 4-36 (Hi) and 4-40 (Lo) on TPA #2 to monitor the Pitch CDU DC D/A output.

46. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

47. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing

b. Observe
NO ATT lamp lights

48. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing

b. Row 1 displays X6377

c. Row 3 displays 00030

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

---

49. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
VERB 06 NOUN 02 Flashing

c. Observe
NO ATT lamp goes out

d. Observe
Row 1 displays +00385

e. Observe
Row 2 displays -00385

f. Observe
Row 3 displays +00385

Record the voltage and sign indications on the DVM.

50. Repeat steps 6 through 15 measuring the voltages on DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

51. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0^{c}, are displayed on Row 1, Row 2 and Row 3.

PITCH TVC MONITOR

52. Connect the Direct Probes to TB 4-28 (Hi) and 4-32 (Lo) on TPA #2 to monitor the Pitch TVC output.

TVC TEST

53. Repeat steps 26 through 41.

YAW (MG) CDU AC D/A MONITOR

54. Connect the Buffered Probes to TB 4-44 (Hi) and 4-48 (Lo) on TPA #2 to monitor the Yaw CDU AC Att Error.

55. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99.

ATTITUDE ERROR (FDAI) TEST

56. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

YAW (MG) CDU C/A MONITOR

57. Connect the Direct Probes to TB 4-35 (Hi) and 4-39 (Lo) on TPA #2 to monitor the Yaw CDU DC D/A output.

58. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

59. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 02 Flashing

b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0^{c}, are displayed on Row 1, Row 2 and Row 3.

60. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing

b. Row 1 displays X6377

c. Row 3 displays 00030

---

61. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
VERB 06 NOUN 02 Flashing

c. Observe
NO ATT lamp goes out

d. Observe
Row 1 displays +00385

e. Observe
Row 2 displays -00385

f. Observe
Row 3 displays +00385

Record the voltage indication and sign.

62. Repeat steps 6 through 15 measuring the voltage on DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurements in step 8.

TEST ABORT

63. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall not be lighted.

64. Perform the following DSKY operations:

a. VERB 34 ENTR

b. Observe
NO ATT lamp is not lighted.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

NOTE: DSKY displays specified in this JDC may in some cases be delayed approximately 15 seconds.

1. Establish a Master Initialization Condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes to TB 4-43 (Hi) and 4-47 (Lo) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 199.

ATTITUDE ERROR (FDAI) TEST

4. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00013 ENTR
c. Observe
VERB 06 NOUN 01 Flashing
d. Observe
PROG lamp indicates 07
e. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

5. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays +00385
c. Row 2 displays -00385
d. Row 3 displays +00385
e. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

6. Enter VERB 33 into DSKY and press

VERIFICATION WITH SIDL REQUIRED BEFORE USE

ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays +00384
c. Row 2 displays -00384
d. Row 3 displays +00384

Record the voltage indication and sign.

7. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays +00160
c. Row 2 displays -00160
d. Row 3 displays +00160

Record the voltage indication and sign.

8. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays +00135
c. Row 2 displays -00135
d. Row 3 displays +00135

Record the voltage indication and sign. Determine and record the phase angle of signal.

9. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays +00090
c. Row 2 displays -00090
d. Row 3 displays +00090

Record the voltage indication and sign.

10. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays +00000
c. Row 2 displays +00000
d. Row 3 displays -00090

Record the voltage indication and sign.

11. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays -00090
c. Row 2 displays +00090
d. Row 3 displays -00135

Record the voltage indication and sign.

12. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays -00135
c. Row 2 displays +00135
d. Row 3 displays -00160

Record the voltage indication and sign.

13. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays -00160

---

c. Row 2 displays +00160
d. Row 3 displays -00384

Record the voltage indication and sign.

14. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays -00384
c. Row 2 displays +00384
d. Row 3 displays -00385

Record the voltage indication and sign.

15. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385
d. Row 3 displays +00000

Record the voltage indication and sign.

16. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall light.

ROLL (OG) CDU DC D/A MONITOR

17. Connect the Direct Probes to TB4-34 (Hi) and 4-38 (Lo) on TPA #2 to monitor the Roll CDU DC D/A output.

18. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

19. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

20. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

21. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 02 Flashing
c. Observe
Row 1 displays +00385
d. Observe
Row 2 displays -00385
e. Observe
Row 3 displays +00385
f. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

22. Repeat steps 6 through 15 measuring the voltages on the DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

---

23. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

YAW TVC MONITOR

24. Connect the Direct Probes to TB 4-29 (Hi) and 4-33 (Lo) on TPA #2 to monitor the Yaw TVC output.

TVC TEST

25. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel, the CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS and the GN&C A/P CONTROL pushbutton on the Test Control panel in that order. The CH30-3/IN0-3 and GN&C A/P CONTROL pushbuttons shall light. The S/C CONTROL OF SATURN pushbutton shall not be lighted.

26. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall light. Set the OPTICS MODE selector on the Indicator Control panel to MAN.

27. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 01 NOUN 10 Flashing
b. Row 1 displays X7373
c. Row 3 displays 00030

28. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 01 NOUN 10 Flashing
c. Observe
Row 1 displays 37777
d. Observe
Row 3 displays 00031

29. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 03 Flashing
c. Observe
Row 1 displays +00385
d. Observe
Row 2 displays -00385
e. Observe
Row 3 displays +00003

Record the voltage indication and sign.

NOTE: Row 3 shall display +00003 until completion of step 39.

30. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00384
c. Row 2 displays -00384
d. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

31. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00160
c. Row 2 displays -00160

Record the voltage and sign indications on the DVM.

32. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00135
c. Row 2 displays -00135

Record the voltage indication and sign.

33. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00090
c. Row 2 displays -00090

Record the voltage indication and sign. Set the OPTICS CONTROLLER SPEED switch on the Indicator Control panel to HI.

34. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00000
c. Row 2 displays +00000

While holding the Optics Hand Controller up and left (45°) no longer than 10 seconds, record the voltage indication and sign.

35. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00090
c. Row 2 displays +00090

Record the voltage indication and sign. Set the OPTICS MODE switch to ZERO for 30 seconds, then return to MAN.

36. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00135
c. Row 2 displays +00135

Record the voltage indication and sign.

37. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00160
c. Row 2 displays +00160

Record the voltage indicator and sign.

38. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

---

b. Row 1 displays -00384
c. Row 2 displays +00384

Record the voltage indication and sign.

39. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385

Record the voltage indication and sign.

TEST ABORT AND RESTART

40. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
PROG lamp indicates 00
c. VERB 57 ENTR
d. Observe
VERB 21 NOUN 01 Flashing
e. 00013 ENTR
f. Observe
VERB 06 NOUN 01 Flashing
g. Observe
NO ATT lamp lights
h. Observe
PROG lamp indicates 07

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

41. Press CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS. Press the GN&C A/P CONTROL pushbutton on the Test Control panel. The pushbuttons shall not be lighted.

PITCH (IG) CDU AC D/A MONITOR

42. Connect the Buffered Probes to TB 4-45 (Hi) and 4-49 (Lo) on TPA #2 to monitor the Pitch CDU AC Att Error.

43. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 99.

ATTITUDE ERROR (FDAI) TEST

44. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

PITCH (IG) CDU DC D/A MONITOR

45. Connect the Direct Probes to TB 4-36 (Hi) and 4-40 (Lo) on TPA #2 to monitor the Pitch CDU DC D/A output.

46. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

47. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

48. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

---

49. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 02 Flashing
c. Observe
NO ATT lamp goes out
d. Observe
Row 1 displays +00385
e. Observe
Row 2 displays -00385
f. Observe
Row 3 displays +00385

Record the voltage and sign indications on the DVM.

50. Repeat steps 6 through 15 measuring the voltages on DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

51. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

PITCH TVC MONITOR

52. Connect the Direct Probes to TB 4-28 (Hi) and 4-32 (Lo) on TPA #2 to monitor the Pitch TVC output.

TVC TEST

53. Repeat steps 25 through 41.

YAW (MG) CDU AC D/A MONITOR

54. Connect the Buffered Probes to TB 4-44 (Hi) and 4-48 (Lo) on TPA #2 to monitor the Yaw CDU AC Att Error.

55. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99.

ATTITUDE ERROR (FDAI) TEST

56. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

YAW (MG) CDU C/A MONITOR

57. Connect the Direct Probes to TB 4-35 (Hi) and 4-39 (Lo) on TPA #2 to monitor the Yaw CDU DC D/A output.

58. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

59. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

60. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

---

61. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 02 Flashing
c. Observe
NO ATT lamp goes out
d. Observe
Row 1 displays +00385
e. Observe
Row 2 displays -00385
f. Observe
Row 3 displays +00385

Record the voltage indication and sign.

62. Repeat steps 6 through 15 measuring the voltage on DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurements in step 8.

TEST ABORT

63. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall not be lighted.

64. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
NO ATT lamp is not lighted.

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: DSKY displays specified in this JDC may in some cases be delayed approximately 15 seconds.

1. Establish a Master Initialization Condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes to TB 4-43 (Hi) and 4-47 (Lo) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 199.

ATTITUDE ERROR (FDAI) TEST

4. Perform the following DSKY operations:

a. VERB 57 ENTR

b. 00013 ENTR

c. Observe
VERB 06 NOUN 01 Flashing

d. Observe
PROG lamp indicates 07

e. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

5. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00385

c. Row 2 displays -00385

d. Row 3 displays +00385

e. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

6. Enter VERB 33 into DSKY and press

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00384

c. Row 2 displays -00384

d. Row 3 displays +00384

Record the voltage indication and sign.

7. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00160

c. Row 2 displays -00160

d. Row 3 displays +00160

Record the voltage indication and sign.

8. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00135

c. Row 2 displays -00135

d. Row 3 displays +00135

Record the voltage indication and sign.

Determine and record the phase angle of signal.

9. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00090

c. Row 2 displays -00090

d. Row 3 displays +00090

Record the voltage indication and sign.

10. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00000

c. Row 2 displays +00000

d. Row 3 displays -00090

Record the voltage indication and sign.

11. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00090

c. Row 2 displays +00090

d. Row 3 displays -00135

Record the voltage indication and sign.

12. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00135

c. Row 2 displays +00135

d. Row 3 displays -00160

Record the voltage indication and sign.

13. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00160

JDC 12221 REV E PAGE 3 OF 8

SUBSYSTEM G & N SYSTEM

ASSY

c. Row 2 displays +00160

d. Row 3 displays -00384

Record the voltage indication and sign.

14. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00384

c. Row 2 displays +00384

d. Row 3 displays -00385

Record the voltage indication and sign.

15. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00385

c. Row 2 displays +00385

d. Row 3 displays +00000

Record the voltage indication and sign.

16. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall light.

ROLL (OG) CDU DC D/A MONITOR

17. Connect the Direct Probes to TB4-34 (Hi) and 4-38 (Lo) on TPA #2 to monitor the Roll CDU DC D/A output.

18. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

19. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing

b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

20. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing

b. Row 1 displays X6377

c. Row 3 displays 00030

21. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
VERB 06 NOUN 02 Flashing

c. Observe
Row 1 displays +00385

d. Observe
Row 2 displays -00385

e. Observe
Row 3 displays +00385

f. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

22. Repeat steps 6 through 15 measuring the voltages on the DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

DATE 30 JUN 66

JOB SPACECRAFT DISPLAY AND CONTROL TEST

JDC 12221 REV E PAGE 4 OF 8

SUBSYSTEM G & N SYSTEM

ASSY

23. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

YAW TVC MONITOR

24. Connect the Direct Probes to TB 4-29 (Hi) and 4-33 (Lo) on TPA #2 to monitor the Yaw TVC output.

TVC TEST

25. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel, the CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS and the GN&C A/P CONTROL pushbutton on the Test Control panel in that order. The CH30-3/IN0-3 and GN&C A/P CONTROL pushbuttons shall light. The S/C CONTROL OF SATURN pushbutton shall not be lighted.

26. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall light. Set the OPTICS MODE selector on the Indicator Control panel to MAN.

27. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 01 NOUN 10 Flashing

b. Row 1 displays X7373

c. Row 3 displays 00030

28. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
VERB 01 NOUN 10 Flashing

c. Observe
Row 1 displays 37777

d. Observe
Row 3 displays 00031

29. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
VERB 06 NOUN 03 Flashing

c. Observe
Row 1 displays +00385

d. Observe
Row 2 displays -00385

e. Observe
Row 3 displays +00003

Record the voltage indication and sign.

NOTE: Row 3 shall display +00003 until completion of step 39.

30. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Row 1 displays +00384

c. Row 2 displays -00384

d. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

DATE 30 JUN 66

31. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00160
c. Row 2 displays -00160

Record the voltage and sign indications on the DVM.

32. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00135
c. Row 2 displays -00135

Record the voltage indication and sign.

33. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00090
c. Row 2 displays -00090

Record the voltage indication and sign. Set the OPTICS CONTROLLER SPEED switch on the Indicator Control panel to HI.

34. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00000
c. Row 2 displays +00000

While holding the Optics Hand Controller up and left (45°) no longer than 10 seconds, record the voltage indication and sign.

35. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00090
c. Row 2 displays +00090

Record the voltage indication and sign. Set the OPTICS MODE switch to ZERO for 30 seconds, then return to MAN.

36. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00135
c. Row 2 displays +00135

Record the voltage indication and sign.

37. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00160
c. Row 2 displays +00160

Record the voltage indicator and sign.

38. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

---

b. Row 1 displays -00384
c. Row 2 displays +00384

Record the voltage indication and sign.

39. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385

Record the voltage indication and sign.

TEST ABORT AND RESTART

40. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
PROG lamp indicates 00
c. VERB 57 ENTR
d. Observe
VERB 21 NOUN 01 Flashing
e. 00013 ENTR
f. Observe
VERB 06 NOUN 01 Flashing
g. Observe
NO ATT lamp lights
h. Observe
PROG lamp indicates 07

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

41. Press CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS. Press the GN&C A/P CONTROL pushbutton on the Test Control panel. The pushbuttons shall not be lighted.

PITCH (IG) CDU AC D/A MONITOR

42. Connect the Buffered Probes to TB 4-45 (Hi) and 4-49 (Lo) on TPA #2 to monitor the Pitch CDU AC Att Error.

43. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 99.

ATTITUDE ERROR (FDAI) TEST

44. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

PITCH (IG) CDU DC D/A MONITOR

45. Connect the Direct Probes to TB 4-36 (Hi) and 4-40 (Lo) on TPA #2 to monitor the Pitch CDU DC D/A output.

46. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

47. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

48. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

---

49. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 02 Flashing
c. Observe
NO ATT lamp goes out
d. Observe
Row 1 displays +00385
e. Observe
Row 2 displays -00385
f. Observe
Row 3 displays +00385

Record the voltage and sign indications on the DVM.

50. Repeat steps 6 through 15 measuring the voltages on DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

51. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

PITCH TVC MONITOR

52. Connect the Direct Probes to TB 4-28 (Hi) and 4-32 (Lo) on TPA #2 to monitor the Pitch TVC output.

TVC TEST

53. Repeat steps 25 through 41.

YAW (MG) CDU AC D/A MONITOR

54. Connect the Buffered Probes to TB 4-44 (Hi) and 4-48 (Lo) on TPA #2 to monitor the Yaw CDU AC Att Error.

55. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99.

ATTITUDE ERROR (FDAI) TEST

56. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

YAW (MG) CDU C/A MONITOR

57. Connect the Direct Probes to TB 4-35 (Hi) and 4-39 (Lo) on TPA #2 to monitor the Yaw CDU DC D/A output.

58. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

59. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

60. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

---

61. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 02 Flashing
c. Observe
NO ATT lamp goes out
d. Observe
Row 1 displays +00385
e. Observe
Row 2 displays -00385
f. Observe
Row 3 displays +00385

Record the voltage indication and sign.

62. Repeat steps 6 through 15 measuring the voltage on DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurements in step 8.

TEST ABORT

63. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall not be lighted.

64. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
NO ATT lamp is not lighted.

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: DSKY displays specified in this JDC may in some cases be delayed approximately 15 seconds.

1. Perform JDC 12215 to establish a Master Initialization condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes to TB 4-43 (Hi) and 4-47 (Lo) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 199.

ATTITUDE ERROR (FDAI) TEST

4. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00013 ENTR
c. Observe
VERB 06 NOUN 01 Flashing
d. Observe
PROG lamp indicates 07
e. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

5. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays +00385
c. Row 2 displays -00385
d. Row 3 displays +00385
e. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

6. Enter VERB 33 into DSKY and press

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

FORM 0[illegible]
Chg. 3-[illegible]

JOB SPACECRAFT DISPLAY AND CONTROL TEST | JDC 12221 REV F PAGE 2 OF 8

SUBSYSTEM G & N SYSTEM | ASSY

ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays +00384
c. Row 2 displays -00384
d. Row 3 displays +00384

Record the voltage indication and sign.

7. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays +00160
c. Row 2 displays -00160
d. Row 3 displays +00160

Record the voltage indication and sign.

8. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays +00135
c. Row 2 displays -00135
d. Row 3 displays +00135

Record the voltage indication and sign. Determine and record the phase angle of signal.

9. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays +00090
c. Row 2 displays -00090
d. Row 3 displays +00090

Record the voltage indication and sign.

10. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays +00000
c. Row 2 displays +00000
d. Row 3 displays -00090

Record the voltage indication and sign.

11. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays -00090
c. Row 2 displays +00090
d. Row 3 displays -00135

Record the voltage indication and sign.

12. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays -00135
c. Row 2 displays +00135
d. Row 3 displays -00160

Record the voltage indication and sign.

13. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays -00160

DATE 30 JUN 66

JOB SPACECRAFT DISPLAY AND CONTROL TEST | JDC 12221 REV F PAGE 3 OF 8

SUBSYSTEM G & N SYSTEM | ASSY

c. Row 2 displays +00160
d. Row 3 displays -00384

Record the voltage indication and sign.

14. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays -00384
c. Row 2 displays +00384
d. Row 3 displays -00385

Record the voltage indication and sign.

15. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385
d. Row 3 displays +00000

Record the voltage indication and sign.

16. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall light.

ROLL (OG) CDU DC D/A MONITOR

17. Connect the Direct Probes to TB4-34 (Hi) and 4-38 (Lo) on TPA #2 to monitor the Roll CDU DC D/A output.

18. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

19. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

20. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

21. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 02 Flashing
c. Observe
Row 1 displays +00385
d. Observe
Row 2 displays -00385
e. Observe
Row 3 displays +00385
f. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

22. Repeat steps 6 through 15 measuring the voltages on the DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

DATE 30 JUN 66

JOB SPACECRAFT DISPLAY AND CONTROL TEST | JDC 12221 REV F PAGE 4 OF 8

SUBSYSTEM G & N SYSTEM | ASSY

23. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

YAW TVC MONITOR

24. Connect the Direct Probes to TB 4-29 (Hi) and 4-33 (Lo) on TPA #2 to monitor the Yaw TVC output.

TVC TEST

25. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel, the CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS and the GN&C A/P CONTROL pushbutton on the Test Control panel in that order. The CH30-3/IN0-3 and GN&C A/P CONTROL pushbuttons shall light. The S/C CONTROL OF SATURN pushbutton shall not be lighted.

26. Press to light OPTICS POWER ON pushbutton on Test Control panel. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

27. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 01 NOUN 10 Flashing
b. Row 1 displays X7373
c. Row 3 displays 00030

28. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 01 NOUN 10 Flashing
c. Observe
Row 1 displays 37777
d. Observe
Row 3 displays 00031

29. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 03 Flashing
c. Observe
Row 1 displays +00385
d. Observe
Row 2 displays -00385
e. Observe
Row 3 displays +00003

Record the voltage indication and sign.

NOTE: Row 3 shall display +00003 until completion of step 39.

30. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00384
c. Row 2 displays -00384
d. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

DATE 30 JUN 66

31. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00160
c. Row 2 displays -00160

Record the voltage and sign indications on the DVM.

32. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00135
c. Row 2 displays -00135

Record the voltage indication and sign.

33. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00090
c. Row 2 displays -00090

Record the voltage indication and sign. Set the OPTICS SPEED switch on the Indicator Control panel to HI.

34. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00000
c. Row 2 displays +00000

While holding the Optics Hand Controller up and left (45°) no longer than 10 seconds, record the voltage indication and sign.

35. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00090
c. Row 2 displays +00090

Record the voltage indication and sign. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO for 20 seconds then return to OFF. On all Indicator Control panels except 2021290, set OPTICS MODE switch to ZERO for 20 seconds then return to MAN.

36. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00135
c. Row 2 displays +00135

Record the voltage indication and sign.

37. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00160
c. Row 2 displays +00160

Record the voltage indicator and sign.

38. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

---

b. Row 1 displays -00384
c. Row 2 displays +00384

Record the voltage indication and sign.

39. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385

Record the voltage indication and sign.

TEST ABORT AND RESTART

40. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
PROG lamp indicates 00
c. VERB 57 ENTR
d. Observe
VERB 21 NOUN 01 Flashing
e. 00013 ENTR
f. Observe
VERB 06 NOUN 01 Flashing
g. Observe
NO ATT lamp lights
h. Observe
PROG lamp indicates 07

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

41. Press CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS. Press the GN&C A/P CONTROL pushbutton on the Test Control panel. The pushbuttons shall not be lighted.

PITCH (IG) CDU AC D/A MONITOR

42. Connect the Buffered Probes to TB 4-45 (Hi) and 4-49 (Lo) on TPA #2 to monitor the Pitch CDU AC Att Error.

43. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 99.

ATTITUDE ERROR (FDAI) TEST

44. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

PITCH (IG) CDU DC D/A MONITOR

45. Connect the Direct Probes to TB 4-36 (Hi) and 4-40 (Lo) on TPA #2 to monitor the Pitch CDU DC D/A output.

46. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

47. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

48. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

---

49. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 02 Flashing
c. Observe
NO ATT lamp goes out
d. Observe
Row 1 displays +00385
e. Observe
Row 2 displays -00385
f. Observe
Row 3 displays +00385

Record the voltage and sign indications on the DVM.

50. Repeat steps 6 through 15 measuring the voltages on DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

51. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

PITCH TVC MONITOR

52. Connect the Direct Probes to TB 4-28 (Hi) and 4-32 (Lo) on TPA #2 to monitor the Pitch TVC output.

TVC TEST

53. Repeat steps 25 through 41.

YAW (MG) CDU AC D/A MONITOR

54. Connect the Buffered Probes to TB 4-44 (Hi) and 4-48 (Lo) on TPA #2 to monitor the Yaw CDU AC Att Error.

55. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99.

ATTITUDE ERROR (FDAI) TEST

56. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

YAW (MG) CDU C/A MONITOR

57. Connect the Direct Probes to TB 4-35 (Hi) and 4-39 (Lo) on TPA #2 to monitor the Yaw CDU DC D/A output.

58. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

59. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

60. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

---

61. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 02 Flashing
c. Observe
NO ATT lamp goes out
d. Observe
Row 1 displays +00385
e. Observe
Row 2 displays -00385
f. Observe
Row 3 displays +00385

Record the voltage indication and sign.

62. Repeat steps 6 through 15 measuring the voltage on DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurements in step 8.

TEST ABORT

63. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall not be lighted.

64. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
NO ATT lamp is not lighted.

65. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

REFERENCES PS-2015000

IMPORTANT
See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CMC test connector before proceeding with this JDC. 2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

NOTE: DSKY displays specified in this JDC may in some cases be delayed approximately 15 seconds.

1. Perform JDC 12215 to establish a Master Initialization condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes to TB 4-43 (Hi) and 4-47 (Lo) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 199.

ATTITUDE ERROR (FDAI) TEST

4. Perform the following DSKY operations:

a. VERB 57 ENTR

b. 00013 ENTR

c. Observe
VERB 06 NOUN 01 Flashing

d. Observe
PROG lamp indicates 07

e. Observe
NO ATT lamp lights

VERIFICATION WITH SIDL REQUIRED BEFORE USE

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

5. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00385

c. Row 2 displays -00385

d. Row 3 displays +00385

e. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

6. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00384

c. Row 2 displays -00384

d. Row 3 displays +00384

Record the voltage indication and sign.

7. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00160

c. Row 2 displays -00160

d. Row 3 displays +00160

Record the voltage indication and sign.

8. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00135

d. Row 2 displays -00135

d. Row 3 displays +00135

Record the voltage indication and sign. Determine and record the phase angle of signal.

9. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00090

c. Row 2 displays -00090

d. Row 3 displays +00090

Record the voltage indication and sign.

10. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays +00000

c. Row 2 displays +00000

d. Row 3 displays -00090

Record the voltage indication and sign.

11. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00090

c. Row 2 displays +00090

d. Row 3 displays -00135

Record the voltage indication and sign.

---

12. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00135

c. Row 2 displays +00135

d. Row 3 displays -00160

Record the voltage indication and sign.

13. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00160

c. Row 2 displays +00160

d. Row 3 displays -00384

Record the voltage indication and sign.

14. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00384

c. Row 2 displays +00384

d. Row 3 displays -00385

Record the voltage indication and sign.

15. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 01 Flashing

b. Row 1 displays -00385

c. Row 2 displays +00385

d. Row 3 displays +00000

Record the voltage indication and sign.

16. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall light.

ROLL (OG) CDU DC D/A MONITOR

17. Connect the Direct Probes to TB4-34 (Hi) and 4-38 (Lo) on TPA #2 to monitor the Roll CDU DC D/A output.

18. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

19. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing

b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

20. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing

b. Row 1 displays X6377

c. Row 3 displays 00030

21. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
VERB 06 NOUN 02 Flashing

c. Observe
Row 1 displays +00385

---

d. Observe
Row 2 displays -00385

e. Observe
Row 3 displays +00385

f. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

22. Repeat steps 6 through 15 measuring the voltages on the DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

23. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing

b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

YAW TVC MONITOR

24. Connect the Direct Probes to TB 4-29 (Hi) and 4-33 (Lo) on TPA #2 to monitor the Yaw TVC output.

TVC TEST

25. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel, the CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS and the GN&C A/P CONTROL pushbutton on the Test Control panel in that order. The CH30-3/IN0-3 and GN&C A/P CONTROL pushbuttons shall light. The S/C CONTROL OF SATURN pushbutton shall not be lighted.

NOTE: If AGC ALARMS indicator 2 lights on Logic Drawer No. 1 of CTS, press ALARM RESET pushbutton on Programmer and Monitor panel.

26. Press to light OPTICS POWER ON pushbutton on Test Control panel. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

27. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 01 NOUN 10 Flashing

b. Row 1 displays X7373

c. Row 3 displays 00030

28. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
VERB 01 NOUN 10 Flashing

c. Observe
Row 1 displays 37777

d. Observe
Row 3 displays 00031

29. Perform the following DSKY operations:

a. VERB 33 ENTR

b. Observe
VERB 06 NOUN 03 Flashing

c. Observe
Row 1 displays +00385

d. Observe
Row 2 displays -00385

e. Observe
Row 3 displays +00003

Record the voltage indication and sign.

NOTE: Row 3 shall display +00003 until completion of step 39.

30. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00384
c. Row 2 displays -00384
d. Observe
NO ATT lamp goes out

Record the voltage indication and sign.

31. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00160
c. Row 2 displays -00160

Record the voltage and sign indications on the DVM.

32. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00135
c. Row 2 displays -00135

Record the voltage indication and sign.

33. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00090
c. Row 2 displays -00090

Record the voltage indication and sign. Set the OPTICS SPEED switch on the Indicator Control panel to HI.

34. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays +00000
c. Row 2 displays +00000

While holding the Optics Hand Controller up and left (45°) no longer than 10 seconds, record the voltage indication and sign.

35. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00090
c. Row 2 displays +00090

Record the voltage indication and sign. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO for 20 seconds then return to OFF. On all Indicator Control panels except 2021290, set OPTICS MODE switch to ZERO for 20 seconds then return to MAN.

36. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00135

c. Row 2 displays +00135

Record the voltage indication and sign.

37. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00160
c. Row 2 displays +00160

Record the voltage indicator and sign.

38. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00384
c. Row 2 displays +00384

Record the voltage indication and sign.

39. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385

Record the voltage indication and sign.

TEST ABORT AND RESTART

40. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
PROG lamp indicates 00
c. VERB 57 ENTR
d. Observe
VERB 21 NOUN 01 Flashing
e. 00013 ENTR
f. Observe
VERB 06 NOUN 01 Flashing
g. Observe
NO ATT lamp lights
h. Observe
PROG lamp indicates 07

Observe the Gimbal Angles, approximately 0^{c}, are displayed on Row 1, Row 2 and Row 3.

41. Press CH30-3/IN0-3 pushbutton on the RDC interface panel of the CTS. Press the GN&C A/P CONTROL pushbutton on the Test Control panel. The pushbuttons shall not be lighted.

PITCH (IG) CDU AC D/A MONITOR

42. Connect the Buffered Probes to TB 4-45 (Hi) and 4-49 (Lo) on TPA #2 to monitor the Pitch CDU AC Att Error.

43. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector to 99.

ATTITUDE ERROR (FDAI) TEST

44. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

PITCH (IG) CDU DC D/A MONITOR

45. Connect the Direct Probes to TB 4-36 (Hi) and 4-40 (Lo) on TPA #2 to monitor the Pitch CDU DC D/A output.

46. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

47. Enter VERB 33 into DSKY and press

ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

48. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

49. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 02 Flashing
c. Observe
NO ATT lamp goes out
d. Observe
Row 1 displays +00385
e. Observe
Row 2 displays -00385
f. Observe
Row 3 displays +00385

Record the voltage and sign indications on the DVM.

50. Repeat steps 6 through 15 measuring the voltages on DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurement in step 8.

51. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 03 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

PITCH TVC MONITOR

52. Connect the Direct Probes to TB 4-28 (Hi) and 4-32 (Lo) on TPA #2 to monitor the Pitch TVC output.

TVC TEST

53. Repeat steps 25 through 41.

YAW (MG) CDU AC D/A MONITOR

54. Connect the Buffered Probes to TB 4-44 (Hi) and 4-48 (Lo) on TPA #2 to monitor the Yaw CDU AC Att Error.

55. Set the VOLTMETER INPUT switch to PAVM SIG 1 and the CROSSBAR CONTROL on the Primary Signal Selector panel to 99.

ATTITUDE ERROR (FDAI) TEST

56. Repeat steps 5 through 16. Determine and record the phase angle of signal in step 8.

YAW (MG) CDU C/A MONITOR

57. Connect the Direct Probes to TB 4-35 (Hi) and 4-39 (Lo) on TPA #2 to monitor the Yaw CDU DC D/A output.

58. Set the VOLTMETER INPUT switch to DVM SIG 2 and the CROSSBAR CONTROL on the Primary Signal Selector to 99. Set the FUNCTION selector on the Digital Voltmeter panel to DC VOLTS.

S/C CONTROL OF SATURN TEST

59. Enter VERB 33 into DSKY and press

ENTR pushbutton. Observe the DSKY displays the following:

a. Observe
VERB 06 NOUN 02 Flashing
b. Observe
NO ATT lamp lights

Observe the Gimbal Angles, approximately 0°, are displayed on Row 1, Row 2 and Row 3.

60. Enter VERB 33 into DSKY and press ENTR pushbutton. Observe the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

61. Perform the following DSKY operations:

a. VERB 33 ENTR
b. Observe
VERB 06 NOUN 02 Flashing
c. Observe
NO ATT lamp goes out
d. Observe
Row 1 displays +00385
e. Observe
Row 2 displays -00385
f. Observe
Row 3 displays +00385

Record the voltage indication and sign.

62. Repeat steps 6 through 15 measuring the voltage on DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash during performance of those steps. Exclude phase angle measurements in step 8.

TEST ABORT

63. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall not be lighted.

64. Perform the following DSKY operations:

a. VERB 34 ENTR
b. Observe
NO ATT lamp is not lighted.

NOTE: If AGC ALARMS indicator 2 lights on Logic Drawer No. 1 of CTS, press ALARM RESET pushbutton on Programmer and Monitor panel.

65. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

JOB SPACECRAFT DISPLAY AND CONTROL TEST

JDC 12221 REV. J PAGE 1 OF 21

INITIAL TDRR 29882 D.S. PGS 7

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION During this test the CGC issues bit commands to the IMU/CDU DAC's resulting in specified ac total and phase outputs and dc voltage outputs of the Pitch, Roll, and Yaw Attitude Error signals. The CGC also issues bit commands to the Optics CDU DAC's resulting in specified dc voltage outputs of the Pitch and Yaw SPS Engine Steering signals.

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL See appropriate section of JDC.

IMPORTANT: 1. Insure that connector assembly (2003099) is removed and W226-P1 is connected to the CGC test connector before proceeding with this JDC.

2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

NOTE: DSKY displays specified in this JDC may in some cases be delayed approximately 15 seconds.

NOTE: This JDC contains two separate procedures. Perform the procedures contained in the right column of each page if a CTS UPLINK tape is being used. Perform the procedure contained in the left column of each page if a CTS UPLINK tape is NOT being used. Do not interchange steps of columns.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

MANUAL LOAD PROCEDURES

TOOLS AND MATERIAL:

None

1. Perform JDC 12215 to establish a Master Initialization condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes on TPA #2 to TB4-43 (high) and TB4-47 (low) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT switch on the Primary Signal Selector panel to PAVM SIG 1 and the CROSSBAR CONTROL to 99.

4. Set FUNCTION switch on PAVM to 0° and FREQUENCY switch to 800 ~ #2.

CTS UPLINK TAPE LOAD PROCEDURES

TOOLS AND MATERIAL:

JDC 12221 CTS UPLINK
Tape, P/N 2901627-001

1. Perform JDC 12215 to establish a Master Initialization condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes on TPA #2 to TB4-43 (high) and TB4-47 (low) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT switch on the Primary Signal Selector panel to PAVM SIG 1 and the CROSSBAR CONTROL to 99.

4. Set FUNCTION switch on PAVM to 0° and FREQUENCY switch to 800 ~ #2.

4A. Prepare the CMC for the UPLINK code by establishing the following conditions on the CTS:

(A) XY Interface panel -
Press to light POSITIVE, NEGATIVE, and TAPE READER pushbuttons. Set AGC INPUT COUNTERS switch to 9.

(B) Programmer and Monitor panel -
Press to light AGC INPUT-CTR and TAPE FREE RUN pushbuttons.

(C) Logic Drawer No. 2 -
Set AGREEMENT B digitswitches to X01X3070. Set AGREEMENT B switch to STOP.

(D) RDC Interface panel -
Press to light CH33-10 pushbutton.

(E) Tape Reader -
Set Power switch to ON. If alarms occur, press PROCEED and ALARM

MANUAL LOAD PROCEDURES

5. Perform following DSKY operations:

CTS UPLINK TAPE LOAD PROCEDURES

RESET pushbuttons on Programmer and Monitor panel and RSET pushbutton on DSKY.

(F) Load the CTS UPLINK tape in the Tape Reader.

(G) Programmer and Monitor panel -
Press EXECUTE pushbutton.

(H) Verify that the tape advances to the beginning of the first UPLINK code.

(I) Programmer and Monitor panel -
Press EXECUTE pushbutton.

(J) Verify that AGREEMENT B lamp on Logic Drawer No. 2 is not lighted.

5. Press EXECUTE pushbutton on Programmer and Monitor panel.

NOTE: The UPLINK ACTY lamp on the DSKY will light during performance of this test.

a. VERB 06 NOUN 01 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385
d. Row 3 displays +00000

Record the PAVM voltage indication and sign.

37. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall light.

ROLL (OG) CDU DC D/A MONITOR

38. Connect the Direct Probes to TB4-34 (high) and TB4-38 (low) on TPA #2 to monitor the Roll CDU DC D/A output.

39. Set the VOLTMETER INPUT switch on Primary Signal Selector panel to DVM SIG 2 and set the CROSSBAR CONTROL to 99. Set the FUNCTION switch on the Digital Voltmeter (DVM) to DC VOLTS.

S/C CONTROL OF SATURN TEST

40. Enter VERB 33 and press ENTR pushbutton on the DSKY.

CTS UPLINK TAPE LOAD PROCEDURES

33. Press EXECUTE pushbutton on Programmer and Monitor panel.

34. Observe that the DSKY displays the following:

a. VERB 06 NOUN 01 Flashing
b. Row 1 displays -00384
c. Row 2 displays +00384
d. Row 3 displays -00385

Record the PAVM voltage indication and sign.

35. Press EXECUTE pushbutton on Programmer and Monitor panel.

36. Observe that the DSKY displays the following:

a. VERB 06 NOUN 01 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385
d. Row 3 displays +00000

Record the PAVM voltage indication and sign.

37. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall light.

ROLL (OG) CDU DC D/A MONITOR

38. Connect the Direct Probes to TB4-34 (high) and TB4-38 (low) on TPA #2 to monitor the Roll CDU DC D/A output.

39. Set the VOLTMETER INPUT switch on Primary Signal Selector panel to DVM SIG 2 and set the CROSSBAR CONTROL to 99. Set the FUNCTION switch on the Digital Voltmeter (DVM) to DC VOLTS.

S/C CONTROL OF SATURN TEST

40. Press EXECUTE pushbutton on Programmer and Monitor panel.

MANUAL LOAD PROCEDURES

41. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. NO ATT lamp lights
c. Row 1, Row 2, and Row 3 indicate approximately 0° Gimbal angles.

42. Enter VERB 33 and press ENTR pushbutton on the DSKY.

43. Observe that the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

44. Enter VERB 33 and press ENTR pushbutton on the DSKY.

45. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Row 1 displays +00385
c. Row 2 displays -00385
d. Row 3 displays +00385
e. NO ATT lamp goes out.

Record the DVM voltage indication and sign.

46. Repeat steps 17 through 36 measuring the voltages on the DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash on the DSKY during performance of these steps. Exclude phase angle measurement in step 22.

47. Enter VERB 33 and press ENTR pushbutton on the DSKY.

CTS UPLINK TAPE LOAD PROCEDURES

41. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. NO ATT lamp lights
c. Row 1, Row 2, and Row 3 indicate approximately 0° Gimbal angles.

42. Press EXECUTE pushbutton on Programmer and Monitor panel.

43. Observe that the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

44. Press EXECUTE pushbutton on Programmer and Monitor panel.

45. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Row 1 displays +00385
c. Row 2 displays -00385
d. Row 3 displays +00385
e. NO ATT lamp goes out.

Record the DVM voltage indication and sign.

46. Repeat steps 17 through 36 measuring the voltages on the DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash on the DSKY during performance of these steps. Exclude phase angle measurement in step 22.

47. Press EXECUTE pushbutton on Programmer and Monitor panel.

MANUAL LOAD PROCEDURES

48. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. NO ATT lamp lights
c. Row 1, Row 2, and Row 3 indicate approximately 0° Gimbal angles.

YAW TVC MONITOR

49. Connect the Direct Probes to TB4-29 (high) and TB4-33 (low) on TPA #2 to monitor the Yaw TVC output.

TVC TEST

50. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel, the CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS, and the GN&C A/P CONTROL pushbutton on the Test Control panel in that order. The CH30-3/IN0-3 and GN&C A/P CONTROL pushbuttons shall light. The S/C CONTROL OF SATURN pushbutton shall not be lighted.

NOTE: If AGC ALARMS indicator 2 lights on Logic Drawer No. 1 of CTS, press ALARM RESET pushbutton on Programmer and Monitor panel.

51. Press to light OPTICS POWER ON pushbutton on Test Control panel. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

CTS UPLINK TAPE LOAD PROCEDURES

48. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. NO ATT lamp lights
c. Row 1, Row 2, and Row 3 indicate approximately 0° Gimbal angles.

YAW TVC MONITOR

49. Connect the Direct Probes to TB4-29 (high) and TB4-33 (low) on TPA #2 to monitor the Yaw TVC output.

TVC TEST

50. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel, the CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS, and the GN&C A/P CONTROL pushbutton on the Test Control panel in that order. The CH30-3/IN0-3 and GN&C A/P CONTROL pushbuttons shall light. The S/C CONTROL OF SATURN pushbutton shall not be lighted.

NOTE: If AGC ALARMS indicator 2 lights on Logic Drawer No. 1 of CTS, press ALARM RESET pushbutton on Programmer and Monitor panel.

51. Press to light OPTICS POWER ON pushbutton on Test Control panel. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

MANUAL LOAD PROCEDURES

52. Enter VERB 33 and press ENTR pushbutton on the DSKY.

53. Observe that the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X7373
c. Row 3 displays 00030

54. Enter VERB 33 and press ENTR pushbutton on the DSKY.

55. Observe that the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays 37777
c. Row 3 displays 00031

56. Enter VERB 33 and press ENTR pushbutton on the DSKY.

57. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays +00385
c. Row 2 displays -00385
d. Row 3 displays +00003

Record the DVM voltage indication and sign.

NOTE: Row 3 of the DSKY shall display +00003 until completion of step 79.

58. Enter VERB 33 and press ENTR pushbutton on the DSKY.

59. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays +00384

CTS UPLINK TAPE LOAD PROCEDURES

52. Press EXECUTE pushbutton on Programmer and Monitor panel.

53. Observe that the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X7373
c. Row 3 displays 00030

54. Press EXECUTE pushbutton on Programmer and Monitor panel.

55. Observe that the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays 37777
c. Row 3 displays 00031

56. Press EXECUTE pushbutton on Programmer and Monitor panel.

57. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays +00385
c. Row 2 displays -00385
d. Row 3 displays +00003

Record the DVM voltage indication and sign.

NOTE: Row 3 of the DSKY shall display +00003 until completion of step 79.

58. Press EXECUTE pushbutton on Programmer and Monitor panel.

59. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays +00384

MANUAL LOAD PROCEDURES

c. Row 2 displays -00384
d. NO ATT lamp goes out.

Record the DVM voltage indication and sign.

60. Press VERB 33 and press ENTR pushbutton on the DSKY.

61. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays +00160
c. Row 2 displays -00160

Record the DVM voltage indication and sign.

62. Enter VERB 33 and press ENTR pushbutton on the DSKY.

63. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays +00135
c. Row 2 displays -00135

Record the DVM voltage indication and sign.

64. Enter VERB 33 and press ENTR pushbutton on the DSKY.

65. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays +00090
c. Row 2 displays -00090

Record the DVM voltage indication and sign.

66. Set OPTICS SPEED switch on Indicator Control panel to HI.

67. Enter VERB 33 and press ENTR pushbutton on the DSKY.

CTS UPLINK TAPE LOAD PROCEDURES

c. Row 2 displays -00384
d. NO ATT lamp goes out.

Record the DVM voltage indication and sign.

60. Press EXECUTE pushbutton on Programmer and Monitor panel.

61. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays +00160
c. Row 2 displays -00160

Record the DVM voltage indication and sign.

62. Press EXECUTE pushbutton on Programmer and Monitor panel.

63. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays +00135
c. Row 2 displays -00135

Record the DVM voltage indication and sign.

64. Press EXECUTE pushbutton on Programmer and Monitor panel.

65. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays +00090
c. Row 2 displays -00090

Record the DVM voltage indication and sign.

66. Set OPTICS SPEED switch on Indicator Control panel to HI.

67. Press EXECUTE pushbutton on Programmer and Monitor panel.

MANUAL LOAD PROCEDURES

68. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays +00000
c. Row 2 displays +00000

While holding the Optics Hand Controller on the Indicator Control panel up and left (45°) no longer than 10 seconds, record the DVM voltage indication and sign.

69. Enter VERB 33 and press ENTR pushbutton on the DSKY.

70. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays -00090
c. Row 2 displays +00090

Record the DVM voltage indication and sign.

> CAUTION: The TRUNNION TPAC on the OUA must indicate between 0 and 10 degrees before the OUA is commanded to zero. Manipulate the Optics Hand Controller on the Indicator Control panel vertically to drive the trunnion axis in a decreasing direction until the TRUNNION TPAC indicates between 0 and 10 degrees. The OPTICS SPEED switch may be adjusted to facilitate positioning the trunnion axis. Do not drive the trunnion axis through zero to the negative limit stop.

CTS UPLINK TAPE LOAD PROCEDURES

68. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays +00000
c. Row 2 displays +00000

While holding the Optics Hand Controller on the Indicator Control panel up and left (45°) no longer than 10 seconds, record the DVM voltage indication and sign.

69. Press EXECUTE pushbutton on Programmer and Monitor panel.

70. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. Row 1 displays -00090
c. Row 2 displays +00090

Record the DVM voltage indication and sign.

> CAUTION: The TRUNNION TPAC on the OUA must indicate between 0 and 10 degrees before the OUA is commanded to zero. SUBSYSTEM G & N SYSTEM | ASSY.

DESCRIPTION During this test the CGC issues bit commands to the IMU/CDU DAC's resulting in specified ac total and phase outputs and dc voltage outputs of the Pitch, Roll, and Yaw Attitude Error signals. The CGC also issues bit commands to the Optics CDU DAC's resulting in specified dc voltage outputs of the Pitch and Yaw SPS Engine Steering signals.

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL See appropriate section of JDC.

IMPORTANT: 1. Insure that cable W226 is removed and connector assembly (2003099) is connected to the CGC test connector before proceeding with this JDC.

2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

NOTE: DSKY displays specified in this JDC may in some cases be delayed approximately 15 seconds.

NOTE: This JDC contains two separate procedures. Perform the procedures contained in the right column of each page if a CTS UPLINK tape is being used. Perform the procedure contained in the left column of each page if a CTS UPLINK tape is NOT being used. Do not interchange steps of columns.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

MANUAL LOAD PROCEDURES

TOOLS AND MATERIAL:

None

1. Perform JDC 12215 to establish a Master Initialization condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes on TPA #2 to TB4-43 (high) and TB4-47 (low) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT switch on the Primary Signal Selector panel to PAVM SIG 1 and the CROSSBAR CONTROL to 99.

4. Set FUNCTION switch on PAVM to 0° and FREQUENCY switch to 800~#2.

CTS UPLINK TAPE LOAD PROCEDURES

TOOLS AND MATERIAL:

JDC 12221 CTS UPLINK Tape, P/N 2901627-001

1. Perform JDC 12215 to establish a Master Initialization condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes on TPA #2 to TB4-43 (high) and TB4-47 (low) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT switch on the Primary Signal Selector panel to PAVM SIG 1 and the CROSSBAR CONTROL to 99.

4. Set FUNCTION switch on PAVM to 0° and FREQUENCY switch to 800~#2.

4A. Prepare the CMC for the UPLINK code by establishing the following conditions on the CTS:

(A) Connect Self Test Assembly, 2014392, to Buffer Box Assembly by connecting P1 to J4, P2 to J5, P3 to J6, and P4 to J10.

(B) XY Interface panel - Press to light POSITIVE, NEGATIVE, and TAPE READER pushbuttons. Set AGC INPUT COUNTERS switch to 9.

(C) Programmer and Monitor panel - Press to light AGC INPUT-CTR and TAPE FREE RUN pushbuttons.

(D) RDC Interface panel - Press to light CH33-10 pushbutton.

(E) Tape Reader - Set Power switch to ON. If alarms occur, press RSET pushbutton on DSKY.

MANUAL LOAD PROCEDURES

5. Perform following DSKY operations:

a.	VERB 21	NOUN 01	ENTR	
b.	01300		ENTR	
c.	30067		ENTR

s.	54027		ENTR	ENTR

CTS UPLINK TAPE LOAD PROCEDURES

(F) Load the CTS UPLINK tape in the Tape Reader.

(G) Self Test panel - Press to light SELF TEST pushbutton. Insure that digiswitches on Self Test panel and on Self Test Assembly are set to 00000.

(H) Programmer and Monitor panel - Press EXECUTE pushbutton.

(I) Verify that the tape advances to the beginning of the first UPLINK code.

(J) Programmer and Monitor panel - Press EXECUTE pushbutton.

5. Press EXECUTE pushbutton on Programmer and Monitor panel.

NOTE: The UPLINK ACTY lamp on the DSKY will light during performance of this test.

40. Press EXECUTE pushbutton on Programmer and Monitor panel.

MANUAL LOAD PROCEDURES

41. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. NO ATT lamp lights
c. Row 1, Row 2, and Row 3 indicate approximately 0° Gimbal angles.

42. Enter VERB 33 and press ENTR pushbutton on the DSKY.

43. Observe that the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

44. Enter VERB 33 and press ENTR pushbutton on the DSKY.

45. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Row 1 displays +00385
c. Row 2 displays -00385
d. Row 3 displays +00385
e. NO ATT lamp goes out.

Record the DVM voltage indication and sign.

46. Repeat steps 17 through 36 measuring the voltages on the DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash on the DSKY during performance of these steps. Exclude phase angle measurement in step 22.

47. Enter VERB 33 and press ENTR pushbutton on the DSKY.

CTS UPLINK TAPE LOAD PROCEDURES

41. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. NO ATT lamp lights
c. Row 1, Row 2, and Row 3 indicate approximately 0° Gimbal angles.

42. Press EXECUTE pushbutton on Programmer and Monitor panel.

43. Observe that the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

44. Press EXECUTE pushbutton on Programmer and Monitor panel.

45. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Row 1 displays +00385
c. Row 2 displays -00385
d. Row 3 displays +00385
e. NO ATT lamp goes out.

Record the DVM voltage indication and sign.

46. Repeat steps 17 through 36 measuring the voltages on the DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash on the DSKY during performance of these steps. Exclude phase angle measurement in step 22.

47. Press EXECUTE pushbutton on Programmer and Monitor panel.

MANUAL LOAD PROCEDURES

48. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. NO ATT lamp lights
c. Row 1, Row 2, and Row 3 indicate approximately 0° Gimbal angles.

YAW TVC MONITOR

49. Connect the Direct Probes to TB4-29 (high) and TB4-33 (low) on TPA #2 to monitor the Yaw TVC output.

TVC TEST

50. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel, the CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS, and the GN&C A/P CONTROL pushbutton on the Test Control panel in that order. The CH30-3/IN0-3 and GN&C A/P CONTROL pushbuttons shall light. The S/C CONTROL OF SATURN pushbutton shall not be lighted.

NOTE: Deleted

51. Press to light OPTICS POWER ON pushbutton on Test Control panel. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

CTS UPLINK TAPE LOAD PROCEDURES

48. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. NO ATT lamp lights
c. Row 1, Row 2, and Row 3 indicate approximately 0° Gimbal angles.

YAW TVC MONITOR

49. Connect the Direct Probes to TB4-29 (high) and TB4-33 (low) on TPA #2 to monitor the Yaw TVC output.

TVC TEST

50. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel, the CH30-3/IN0-3 pushbutton on the RDC Interface panel of the CTS, and the GN&C A/P CONTROL pushbutton on the Test Control panel in that order. The CH30-3/IN0-3 and GN&C A/P CONTROL pushbuttons shall light. The S/C CONTROL OF SATURN pushbutton shall not be lighted.

NOTE: Deleted

51. Press to light OPTICS POWER ON pushbutton on Test Control panel. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

JOB SPACECRAFT DISPLAY AND CONTROL TEST

JDC 12221 REV. L PAGE 1 OF 21
INITIAL TDRR 29882 D.S. PGS 7

SUBSYSTEM G & N SYSTEM
ASSY.

DESCRIPTION During this test the CGC issues bit commands to the IMU/CDU DAC's resulting in specified ac total and phase outputs and dc voltage outputs of the Pitch, Roll, and Yaw Attitude Error signals. The CGC also issues bit commands to the Optics CDU DAC's resulting in specified dc voltage outputs of the Pitch and Yaw SPS Engine Steering signals.

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL See appropriate section of JDC.

IMPORTANT: 1. Insure that cable W226 is removed and connector assembly (2003099) or Restart Monitor module (2898989) is connected to the CGC test connector before proceeding with this JDC.

2. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

NOTE: DSKY displays specified in this JDC may in some cases be delayed approximately 15 seconds.

NOTE: This JDC contains two separate procedures. Perform the procedures contained in the right column of each page if a CTS UPLINK tape is being used. Perform the procedure contained in the left column of each page if a CTS UPLINK tape is NOT being used. Do not interchange steps of columns.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

SUBSYSTEM G & N SYSTEM

ASSY

MANUAL LOAD PROCEDURES

TOOLS AND MATERIAL:
None

1. Perform JDC 12215 to establish a Master Initialization condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes on TPA #2 to TB4-43 (high) and TB4-47 (low) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT switch on the Primary Signal Selector panel to PAVM SIG 1 and the CROSSBAR CONTROL to 99.

4. Set FUNCTION switch on PAVM to 0° and FREQUENCY switch to 800~ #2.

CTS UPLINK TAPE LOAD PROCEDURES

TOOLS AND MATERIAL:
JDC 12221 CTS UPLINK
Tape, P/N 2901627-001

1. Perform JDC 12215 to establish a Master Initialization condition.

ROLL (OG) CDU AC D/A MONITOR

2. Connect the Buffered Probes on TPA #2 to TB4-43 (high) and TB4-47 (low) to monitor the Roll CDU AC Att Error.

3. Set the VOLTMETER INPUT switch on the Primary Signal Selector panel to PAVM SIG 1 and the CROSSBAR CONTROL to 99.

4. Set FUNCTION switch on PAVM to 0° and FREQUENCY switch to 800~ #2.

4A. Prepare the CMC for the UPLINK code by establishing the following conditions on the CTS:

(A) Connect Self Test Assembly, 2014392, to Buffer Box Assembly by connecting P1 to J4, P2 to J5, P3 to J6, and P4 to J10.

(B) XY Interface panel -
Press to light POSITIVE, NEGATIVE, and TAPE READER pushbuttons. Set AGC INPUT COUNTERS switch to 9.

(C) Programmer and Monitor panel -
Press to light AGC INPUT-CTR and TAPE FREE RUN pushbuttons.

(D) RDC Interface panel -
Press to light CH33-10 pushbutton.

(E) Tape Reader -
Set Power switch to ON. If alarms occur, press RSET pushbutton on DSKY.

CTS UPLINK TAPE LOAD PROCEDURES

(F) Load the CTS UPLINK tape in the Tape Reader.

(G) Self Test panel -
Press to light SELF TEST pushbutton. Insure that digiswitches on Self Test panel and on Self Test Assembly are set to 00000.

(H) Programmer and Monitor panel -
Press EXECUTE pushbutton.

(I) Verify that the tape advances to the beginning of the first UPLINK code.

(J) Programmer and Monitor panel -
Press EXECUTE pushbutton.

5. Press EXECUTE pushbutton on Programmer and Monitor panel.

NOTE: The UPLINK ACTY lamp on the DSKY will light during performance of this test.

d. Row 3 displays -00090

Record the PAVM voltage indication and sign.

27. Press EXECUTE pushbutton on Programmer and Monitor panel.

28. Observe that the DSKY displays the following:

a. VERB 06 NOUN 01 Flashing
b. Row 1 displays -00090
c. Row 2 displays +00090
d. Row 3 displays -00135

Record the PAVM voltage indication and sign.

29. Press EXECUTE pushbutton on Programmer and Monitor panel.

30. Observe that the DSKY displays the following:

a. VERB 06 NOUN 01 Flashing
b. Row 1 displays -00135
c. Row 2 displays +00135
d. Row 3 displays -00160

Record the PAVM voltage indication and sign.

31. Press EXECUTE pushbutton on Programmer and Monitor panel.

32. Observe that the DSKY displays the following:

a. VERB 06 NOUN 01 Flashing
b. Row 1 displays -00160
c. Row 2 displays +00160
d. Row 3 displays -00384

Record the PAVM voltage indication and sign.

MANUAL LOAD PROCEDURES

33. Enter VERB 33 and press ENTR pushbutton on the DSKY.

34. Observe that the DSKY displays the following:

a. VERB 06 NOUN 01 Flashing
b. Row 1 displays -00384
c. Row 2 displays +00384
d. Row 3 displays -00385

Record the PAVM voltage indication and sign.

35. Enter VERB 33 and press ENTR pushbutton on the DSKY.

36. Observe that the DSKY displays the following:

a. VERB 06 NOUN 01 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385
d. Row 3 displays +00000

Record the PAVM voltage indication and sign.

37. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall light.

ROLL (OG) CDU DC D/A MONITOR

38. Connect the Direct Probes to TB4-34 (high) and TB4-38 (low) on TPA #2 to monitor the Roll CDU DC D/A output.

39. Set the VOLTMETER INPUT switch on Primary Signal Selector panel to DVM SIG 2 and set the CROSSBAR CONTROL to 99. Set the FUNCTION switch on the Digital Voltmeter (DVM) to DC VOLTS.

S/C CONTROL OF SATURN TEST

40. Enter VERB 33 and press ENTR pushbutton on the DSKY.

CTS UPLINK TAPE LOAD PROCEDURES

33. Press EXECUTE pushbutton on Programmer and Monitor panel.

34. Observe that the DSKY displays the following:

a. VERB 06 NOUN 01 Flashing
b. Row 1 displays -00384
c. Row 2 displays +00384
d. Row 3 displays -00385

Record the PAVM voltage indication and sign.

35. Press EXECUTE pushbutton on Programmer and Monitor panel.

36. Observe that the DSKY displays the following:

a. VERB 06 NOUN 01 Flashing
b. Row 1 displays -00385
c. Row 2 displays +00385
d. Row 3 displays +00000

Record the PAVM voltage indication and sign.

37. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall light.

ROLL (OG) CDU DC D/A MONITOR

38. Connect the Direct Probes to TB4-34 (high) and TB4-38 (low) on TPA #2 to monitor the Roll CDU DC D/A output.

39. Set the VOLTMETER INPUT switch on Primary Signal Selector panel to DVM SIG 2 and set the CROSSBAR CONTROL to 99. Set the FUNCTION switch on the Digital Voltmeter (DVM) to DC VOLTS.

S/C CONTROL OF SATURN TEST

40. Press EXECUTE pushbutton on Programmer and Monitor panel.

MANUAL LOAD PROCEDURES

41. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. NO ATT lamp lights
c. Row 1, Row 2, and Row 3 indicate approximately 0° Gimbal angles.

42. Enter VERB 33 and press ENTR pushbutton on the DSKY.

43. Observe that the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

44. Enter VERB 33 and press ENTR pushbutton on the DSKY.

45. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Row 1 displays +00385
c. Row 2 displays -00385
d. Row 3 displays +00385
e. NO ATT lamp goes out.

Record the DVM voltage indication and sign.

46. Repeat steps 17 through 36 measuring the voltages on the DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash on the DSKY during performance of these steps. Exclude phase angle measurement in step 22.

47. Enter VERB 33 and press ENTR pushbutton on the DSKY.

CTS UPLINK TAPE LOAD PROCEDURES

41. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. NO ATT lamp lights
c. Row 1, Row 2, and Row 3 indicate approximately 0° Gimbal angles.

42. Press EXECUTE pushbutton on Programmer and Monitor panel.

43. Observe that the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

44. Press EXECUTE pushbutton on Programmer and Monitor panel.

45. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. Row 1 displays +00385
c. Row 2 displays -00385
d. Row 3 displays +00385
e. NO ATT lamp goes out.

Record the DVM voltage indication and sign.

46. Repeat steps 17 through 36 measuring the voltages on the DVM rather than PAVM. Note that VERB 06 and NOUN 02 shall flash on the DSKY during performance of these steps. Exclude phase angle measurement in step 22.

47. Press EXECUTE pushbutton on Programmer and Monitor panel.

MANUAL LOAD PROCEDURES

48. Observe that the DSKY displays the following:

a. VERB 06 NOUN 03 Flashing
b. NO ATT lamp lights
c. Row 1, Row 2, and Row 3 indicate approximately 0° Gimbal angles.

YAW TVC MONITOR

CTS UPLINK TAPE LOAD PROCEDURES

110. Press EXECUTE pushbutton on Programmer and Monitor panel.

111. Observe that the DSKY displays the following:

a. VERB 01 NOUN 10 Flashing
b. Row 1 displays X6377
c. Row 3 displays 00030

112. Press EXECUTE pushbutton on Programmer and Monitor panel.

113. Observe that the DSKY displays the following:

a. VERB 06 NOUN 02 Flashing
b. NO ATT lamp goes out
c. Row 1 displays +00385
d. Row 2 displays -00385
e. Row 3 displays +00385

Record the DVM voltage indication and sign.

114. Repeat steps 17 through 36 measuring the voltage on DVM rather than PAVM. Note that VERB 06 NOUN 02 shall flash during performance of these steps. Exclude phase angle measurement in step 22.

TEST ABORT

115. Press the S/C CONTROL OF SATURN pushbutton on the Test Control panel. The pushbutton shall go out.

116. Press EXECUTE pushbutton on Programmer and Monitor panel.

117. Observe that NO ATT lamp on DSKY is not lighted.

SUBSYSTEM G & N SYSTEM | ASSY

MANUAL LOAD PROCEDURES

118. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

119. Enter VERB 36 and press ENTR pushbutton on the DSKY.

NOTE: Step 119A applies only when Restart Monitor module (2898989) is installed.

119A. Perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00077 ENTR
c. The contents of Row 1 shall be 00000.

CTS UPLINK TAPE LOAD PROCEDURES

118. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

119. Press EXECUTE pushbutton on Programmer and Monitor panel.

NOTE: Step 119A applies only when Restart Monitor module (2898989) is installed.

119A. Perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00077 ENTR
c. The contents of Row 1 shall be 00000.

120. Press to extinguish POSITIVE, NEGATIVE, and TAPE READER pushbuttons on XY Interface panel. Set AGC INPUT COUNTERS switch to 1.

121. Press MONITOR pushbutton on Programmer and Monitor panel. MONITOR pushbutton shall light. AGC INPUT-CTR pushbutton shall go out. Press to extinguish TAPE FREE RUN pushbutton.

122. Press to extinguish CH33-10 pushbutton on RDC Interface panel.

123. Rewind and remove tape from Tape Reader and set Power switch to OFF. If alarms occur, press RSET pushbutton on DSKY.

124. Disconnect Self Test Assembly from Buffer Box Assembly.

125. Press to extinguish SELF TEST pushbutton on Self Test panel.

							TOOLS AND MATERIAL

DESCRIPTION. This procedure tests the Gyro Compassing capabilities of the G & N System. The test is is computer controlled. The system is erected with the X Gyro Northeast, the Y Gyro Southeast, and the Z Gyro down. The output of the X and Y PIPA's is used to hold the platform vertical. The Y PIPA and X Gyro comprise the compassing loop. The X and Y gyro elevation errors and the Z gyro azimuth error are checked after a two hour settling period and every 15 minutes thereafter for a period of 3 hours, using optical verification. The test takes approximately 5 hours to perform. From the third to the fourth hour, the prime power is set to the LO limit. From the fourth to the fifth hour the prime power is set to the HI limit.

INITIALIZATION

1. Establish a Master Initialization Condition.

VOLTAGE SETTING (NOMINAL)

2. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust

VERIFICATION WITH SIDL REQUIRED BEFORE USE

the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±05) vdc. Record the indication.

TEST ENTRY

3. Perform the following DSKY operations:

VERB 57 ENTR
00006 ENTR

Observe the PROG lamp changes to 01.

4. When VERB 06 and NOUN 61 commence flashing, insure that Row 1 of the DSKY displays +04500. If the display is correct proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations. To change only Row 1:

VERB 21 ENTR
+04500 ENTR

6. Perform the following DSKY operation:

VERB 33 ENTR

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000
Row 2 displays +XX.XXX (Test site latitude from Table 1)

If the display is correct proceed to step 9, if not proceed to step 8.

8. Perform the following DSKY operations. To change only Row 1:

VERB 21 ENTR
+18000 ENTR

To change only Row 2

VERB 22 ENTR
+XX.XXX (Test site latitude from Table 1) ENTR

9. Perform the following DSKY operations:

VERB 33 ENTR

Observe the PROG lamp changes to 01 for approximately 90 seconds then to 05 for approximately 15 minutes, then to 02 for the duration of this test.

TEST RESULTS AT 2 HRS

10. After 120 minutes have elapsed since initiation of step 9, set the OPTICS MODE switch on the Indicator Control panel to ZERO.

11. Perform the following DSKY operations:

Enter VERB 52 ENTR

Observe the PROG lamp changes to 03.

TARGET #1 AZ AND ELEV

12. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000
Row 2 displays +00000

If the display is correct proceed to step 14, if not, proceed to step 13.

13. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24 ENTR
+18000 ENTR
+00000 ENTR

14. Perform the following DSKY operation:

VERB 33 ENTR

TARGET #4 AZ AND ELEV

15. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +13500
Row 2 displays +00000

DATE 30 JUN 66

JOB GYRO COMPASSING
JDC 12222 REV A PAGE 3 OF 4

SUBSYSTEM G & N SYSTEM
ASSY

If display is correct proceed to step 17, if not, proceed to step 16.

16. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24 ENTR
+13500 ENTR
+00000 ENTR

17. Perform the following DSKY operations:

VERB 33 ENTR

MARK ON TARGET #1

18. Set the OPTICS MODE switch on the Indicator Control panel to MAN and the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 180.0° and 32.5° respectively.

19. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If MARK was satisfactory, proceed to the next step, if not press MARK REJECT and repeat this step.

MARK ON TARGET #4

20. Set the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 241.0° and 53° respectively.

21. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton. If MARK was satisfactory, press ENTR and proceed to the next step, if not, press MARK REJECT and repeat this step.

X, Y, Z GYRO ERRORS

22. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

23. Perform the following DSKY operations:

VERB 34 ENTR

Observe the PROG lamp changes to 02. Set the OPTICS MODE switch to ZERO.

24. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

25. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 25.8 (+0.25, -0 vdc). Record the indication.

26. Repeat step 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (HI BUS)

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 31.8 (+0, -0.25 vdc). Record the indication.

28. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION: This procedure tests the Gyro Compassing capabilities of the G & N System. The test is is computer controlled. The system is erected with the X Gyro Northeast, the Y Gyro Southeast, and the Z Gyro down. The output of the X and Y PIPA's is used to hold the platform vertical. The Y PIPA and X Gyro comprise the compassing loop. The X and Y gyro elevation errors and the Z gyro azimuth error are checked after a two hour settling period and every 15 minutes thereafter for a period of 3 hours, using optical verification. The test takes approximately 5 hours to perform. From the third to the fourth hour, the prime power is set to the LO limit. From the fourth to the fifth hour the prime power is set to the HI limit.

INITIALIZATION

1. Establish a Master Initialization Condition.

VOLTAGE SETTING (NOMINAL)

2. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±05) vdc. Record the indication.

TEST ENTRY

3. Perform the following DSKY operations:

VERB 57 ENTR
00006 ENTR

Observe the PROG lamp changes to 01.

4. When VERB 06 and NOUN 61 commence flashing, insure that Row 1 of the DSKY displays +04500. If the display is correct proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations. To change only Row 1:

VERB 21 ENTR
+04500 ENTR

6. Perform the following DSKY operation:

VERB 33 ENTR

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000
Row 2 displays +XX.XXX (Test site latitude from Table 1)

If the display is correct proceed to step 9, if not proceed to step 8.

8. Perform the following DSKY operations. To change only Row 1:

VERB 21 ENTR
+18000 ENTR

To change only Row 2

VERB 22 ENTR
+XX.XXX (Test site latitude from Table 1) ENTR

9. Perform the following DSKY operations:

VERB 33 ENTR

Observe the PROG lamp remains at 01 for approximately 90 seconds then to 05 for approximately 15 minutes, then to 02 for the duration of this test.

TEST RESULTS AT 2 HRS

10. After 120 minutes have elapsed since initiation of step 9, set the OPTICS MODE switch on the Indicator Control panel to ZERO.

11. Perform the following DSKY operations:

Enter VERB 52 ENTR

Observe the PROG lamp changes to 03.

TARGET #1 AZ AND ELEV

12. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000
Row 2 displays +00000

If the display is correct proceed to step 14, if not, proceed to step 13.

13. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24 ENTR
+18000 ENTR
+00000 ENTR

14. Perform the following DSKY operation:

VERB 33 ENTR

TARGET #4 AZ AND ELEV

15. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +13500
Row 2 displays +00000

If display is correct proceed to step 17, if not, proceed to step 16.

16. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24 ENTR
+13500 ENTR
+00000 ENTR

17. Perform the following DSKY operations:

VERB 33 ENTR

MARK ON TARGET #1

18. Set the OPTICS MODE switch on the Indicator Control panel to MAN and the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 180.0° and 32.5° respectively.

19. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If MARK was satisfactory, proceed to the next step, if not press MARK REJECT and repeat this step.

MARK ON TARGET #4

20. Set the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 241.0° and 53° respectively.

21. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton. If MARK was satisfactory, press ENTR and proceed to the next step, if not, press MARK REJECT and repeat this step.

X, Y, Z GYRO ERRORS

22. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

23. Perform the following DSKY operations:

VERB 34 ENTR

Observe the PROG lamp changes to 02. Set the OPTICS MODE switch to ZERO.

24. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

25. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 25.8 (+0.25, -0 vdc). Record the indication.

26. Repeat step 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (HI BUS)

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 31.8 (+0, -0.25 vdc). Record the indication.

28. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

---

29. Perform the following DSKY operations:

VERB 36 ENTR

30. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±0.5) vdc.

31. Perform the calculations on the calculation sheet and complete the data sheets.

32. Upon completion of data sheets, make a copy of data sheets and forward immediately to:

TOOLS AND MATERIAL

DESCRIPTION: This procedure tests the Gyro Compassing capabilities of the G & N System. The test is is computer controlled. The system is erected with the X Gyro Northeast, the Y Gyro Southeast, and the Z Gyro down. The output of the X and Y PIPA's is used to hold the platform vertical. The Y PIPA and X Gyro comprise the compassing loop. The X and Y gyro elevation errors and the Z gyro azimuth error are checked after a two hour settling period and every 15 minutes thereafter for a period of 3 hours, using optical verification. The test takes approximately 5 hours to perform. From the third to the fourth hour, the prime power is set to the LO limit. From the fourth to the fifth hour the prime power is set to the HI limit.

INITIALIZATION

1. Establish a Master Initialization Condition.

VOLTAGE SETTING (NOMINAL)

2. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±0.5) vdc. Record the indication.

TEST ENTRY

3. Perform the following DSKY operations:

VERB 57 ENTR
00006 ENTR

Observe the PROG lamp changes to 01.

4. When VERB 06 and NOUN 61 commence flashing, insure that Row 1 of the DSKY displays +04500. If the display is correct proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations. To change only Row 1:

VERB 21 ENTR
+04500 ENTR

6. Perform the following DSKY operation:

VERB 33 ENTR

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000
Row 2 displays +XX.XXX (Test site latitude from Table 1)

If the display is correct proceed to step 9, if not proceed to step 8.

8. Perform the following DSKY operations. To change only Row 1:

VERB 21 ENTR
+18000 ENTR

To change only Row 2

VERB 22 ENTR
+XX.XXX (Test site latitude from Table 1) ENTR

9. Perform the following DSKY operations:

VERB 33 ENTR

Observe the PROG lamp remains at 01 for approximately 90 seconds then to 05 for approximately 15 minutes, then to 02 for the duration of this test.

TEST RESULTS AT 2 HRS

10. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall light. After 120 minutes have elapsed since initiation of step 9, set the OPTICS MODE switch on the Indicator Control panel to ZERO.

11. Perform the following DSKY operations:

Enter VERB 52 ENTR

Observe the PROG lamp changes to 03.

TARGET #1 AZ AND ELEV

12. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000
Row 2 displays +00000

If the display is correct proceed to step 14, if not, proceed to step 13.

13. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24 ENTR
+18000 ENTR
+00000 ENTR

14. Perform the following DSKY operation:

VERB 33 ENTR

TARGET #4 AZ AND ELEV

15. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +13500
Row 2 displays +00000

If display is correct proceed to step 17, if not, proceed to step 16.

16. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24 ENTR
+13500 ENTR
+00000 ENTR

17. Perform the following DSKY operations:

VERB 33 ENTR

MARK ON TARGET #1

18. Set the OPTICS MODE switch on the Indicator Control panel to MAN and the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 180.0° and 32.5° respectively.

19. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If MARK was satisfactory, proceed to the next step, if not press MARK REJECT and repeat this step.

MARK ON TARGET #4

20. Set the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 241.0° and 53° respectively.

21. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton. If MARK was satisfactory, press ENTR and proceed to the next step, if not, press MARK REJECT and repeat this step.

X, Y, Z GYRO ERRORS

22. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

23. Perform the following DSKY operations:

VERB 34 ENTR

Observe the PROG lamp changes to 02. Set the OPTICS MODE switch to ZERO.

24. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

25. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 25.8 (+0.25, -0 vdc). Record the indication.

---

26. Repeat step 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (HI BUS)

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 31.8 (+0, -0.25 vdc). Record the indication.

28. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

29. Perform the following DSKY operations:

VERB 36 ENTR

30. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±0.5) vdc. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

31. Perform the calculations on the calculation sheet and complete the data sheets.

32. Upon completion of data sheets, make a copy of data sheets and forward immediately to:

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION: This procedure tests the Gyro Compassing capabilities of the G & N System. The test is is computer controlled. The system is erected with the X Gyro Northeast, the Y Gyro Southeast, and the Z Gyro down. The output of the X and Y PIPA's is used to hold the platform vertical. The Y PIPA and X Gyro comprise the compassing loop. The X and Y gyro elevation errors and the Z gyro azimuth error are checked after a two hour settling period and every 15 minutes thereafter for a period of 3 hours, using optical verification. The test takes approximately 5 hours to perform. From the third to the fourth hour, the prime power is set to the LO limit. From the fourth to the fifth hour the prime power is set to the HI limit.

INITIALIZATION

1. Establish a Master Initialization Condition.

VOLTAGE SETTING (NOMINAL)

2. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±Q5) vdc. Record the indication.

TEST ENTRY

3. Perform the following DSKY operations:

VERB 57	ENTR
00006	ENTR

Observe the PROG lamp changes to 01.

4. When VERB 06 and NOUN 61 commence flashing, insure that Row 1 of the DSKY displays +04500. If the display is correct proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations. To change only Row 1:

VERB 21	ENTR
+04500	ENTR

6. Perform the following DSKY operation:

VERB 33	ENTR

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays	+18000
Row 2 displays	+XX.XXX (Test site latitude from Table 1)

If the display is correct proceed to step 9, if not proceed to step 8.

8. Perform the following DSKY operations. To change only Row 1:

VERB 21	ENTR
+18000	ENTR

To change only Row 2

VERB 22	ENTR
+XX.XXX (Test site latitude from Table 1)	ENTR

9. Perform the following DSKY operations:

VERB 33	ENTR

Observe the PROG lamp remains at 01 for approximately 90 seconds then to 05 for approximately 15 minutes, then to 02 for the duration of this test.

TEST RESULTS AT 2 HRS

10. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall light. After 120 minutes have elapsed since initiation of step 9, set the OPTICS MODE switch on the Indicator Control panel to ZERO.

11. Perform the following DSKY operations:

Enter VERB 52	ENTR

Observe the PROG lamp changes to 03.

TARGET #1 AZ AND ELEV

12. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000

Row 2 displays +00000

If the display is correct proceed to step 14, if not, proceed to step 13.

13. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24	ENTR
+18000	ENTR
+00000	ENTR

14. Perform the following DSKY operation:

VERB 33	ENTR

TARGET #4 AZ AND ELEV

15. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +13500

Row 2 displays +00000

If display is correct proceed to step 17, if not, proceed to step 16.

16. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24	ENTR
+13500	ENTR
+00000	ENTR

17. Perform the following DSKY operations:

VERB 33	ENTR

MARK ON TARGET #1

18. Set the OPTICS MODE switch on the Indicator Control panel to MAN and the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 180.0° and 32.5° respectively.

19. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If MARK was satisfactory, proceed to the next step, if not press MARK REJECT and repeat this step.

MARK ON TARGET #4

20. Set the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 241.0° and 53° respectively.

21. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton. If MARK was satisfactory, press ENTR and proceed to the next step, if not, press MARK REJECT and repeat this step.

X, Y, Z GYRO ERRORS

22. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

23. Perform the following DSKY operations:

VERB 34	ENTR

Observe the PROG lamp changes to 02. Set the OPTICS MODE switch to ZERO.

24. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

25. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 25.8 (+0.25, -0 vdc). Record the indication.

---

26. Repeat step 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (HI BUS)

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 31.8 (+0, -0.25 vdc). Record the indication.

28. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

29. Perform the following DSKY operations:

VERB 36	ENTR

30. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±0.5) vdc. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

31. Perform the calculations on the calculation sheet and complete the data sheets.

32. Upon completion of data sheets, make a copy of data sheets and forward immediately to:

							TOOLS AND MATERIAL

DESCRIPTION: This procedure tests the Gyro Compassing capabilities of the G & N System. The test is is computer controlled. The system is erected with the X Gyro Northeast, the Y Gyro Southeast, and the Z Gyro down. The output of the X and Y PIPA's is used to hold the platform vertical. The Y PIPA and X Gyro comprise the compassing loop. The X and Y gyro elevation errors and the Z gyro azimuth error are checked after a two hour settling period and every 15 minutes thereafter for a period of 3 hours, using optical verification. The test takes approximately 5 hours to perform. From the third to the fourth hour, the prime power is set to the LO limit. From the fourth to the fifth hour the prime power is set to the HI limit.

INITIALIZATION

1. Establish a Master Initialization Condition.

VOLTAGE SETTING (NOMINAL)

2. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±05) vdc. Record the indication.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

TEST ENTRY

3. Perform the following DSKY operations:

VERB 57 ENTR
00006 ENTR

Observe the PROG lamp changes to 01.

4. When VERB 06 and NOUN 61 commence flashing, insure that Row 1 of the DSKY displays +04500. If the display is correct proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations To change only Row 1:

VERB 21 ENTR
+04500 ENTR

6. Perform the following DSKY operation:

VERB 33 ENTR

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000
Row 2 displays +XX.XXX (Test site latitude from Table 1)

If the display is correct proceed to step 9, if not proceed to step 8.

8. Perform the following DSKY operations To change only Row 1:

VERB 21 ENTR
+18000 ENTR

To change only Row 2

VERB 22 ENTR
+XX.XXX (Test site latitude from Table 1) ENTR

9. Perform the following DSKY operations:

VERB 33 ENTR

Observe the PROG lamp remains at 01 for approximately 90 seconds then to 05 for approximately 15 minutes, then to 02 for the duration of this test.

TEST RESULTS AT 2 HRS

10. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall light. After 120 minutes have elapsed since initiation of step 9, set the OPTICS MODE switch on the Indicator Control panel to ZERO.

11. Perform the following DSKY operations:

Enter VERB 52 ENTR

Observe the PROG lamp changes to 03.

TARGET #1 AZ AND ELEV

12. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000
Row 2 displays +00000

If the display is correct proceed to step 14, if not, proceed to step 13.

13. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24 ENTR
+18000 ENTR
+00000 ENTR

14. Perform the following DSKY operation:

VERB 33 ENTR

TARGET #4 AZ AND ELEV

15. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +13500
Row 2 displays +00000

If display is correct proceed to step 17, if not, proceed to step 16.

16. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24 ENTR
+13500 ENTR
+00000 ENTR

17. Perform the following DSKY operations:

VERB 33 ENTR

MARK ON TARGET #1

18. Set the OPTICS MODE switch on the Indicator Control panel to MAN and the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 180.0° and 32.5° respectively.

19. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If MARK was satisfactory, proceed to the next step, if not press MARK REJECT and repeat this step.

MARK ON TARGET #4

20. Set the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 241.0° and 53° respectively.

21. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton. If MARK was satisfactory, press ENTR and proceed to the next step, if not, press MARK REJECT and repeat this step.

X, Y, Z GYRO ERRORS

22. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

23. Perform the following DSKY operations:

VERB 34 ENTR

Observe the PROG lamp changes to 02. Set the OPTICS MODE switch to ZERO.

24. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

25. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 25.8 (+0.25, -0 vdc). Record the indication.

26. Repeat step 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (HI BUS)

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 31.8 (+0, -0.25 vdc). Record the indication.

28. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

29. Perform the following DSKY operations:

VERB 36 ENTR

30. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±0.5) vdc. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

31. Perform the calculations on the calculation sheet and complete the data sheets.

32. Upon completion of data sheets, make a copy of data sheets and forward immediately to:

TOOLS AND MATERIAL

DESCRIPTION: This procedure tests the Gyro Compassing capabilities of the G & N System. The test is is computer controlled. The system is erected with the X Gyro Northeast, the Y Gyro Southeast, and the Z Gyro down. The output of the X and Y PIPA's is used to hold the platform vertical. The Y PIPA and X Gyro comprise the compassing loop. The X and Y gyro elevation errors and the Z gyro azimuth error are checked after a two hour settling period and every 15 minutes thereafter for a period of 3 hours, using optical verification. The test takes approximately 5 hours to perform. From the third to the fourth hour, the prime power is set to the LO limit. From the fourth to the fifth hour the prime power is set to the HI limit.

INITIALIZATION

1. Establish a Master Initialization Condition (JDC 12215). Insure that G&N Mounting Fixture is tilted to 32.5°.

VOLTAGE SETTING (NOMINAL)

2. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust

VERIFICATION WITH SIDL REQUIRED BEFORE USE

If MARK was satisfactory, press ENTR and proceed to next step, if not, press MARK REJECT and repeat this step.

X, Y, Z GYRO ERRORS

22. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

23. Perform the following DSKY operations:

VERB 34	ENTR

Observe the PROG lamp changes to 02. Set the OPTICS MODE switch to ZERO.

24. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

25. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 25.8 (+0.25, -0 vdc). Record the indication.

---

26. Repeat step 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (HI BUS)

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 31.8 (+0, -0.25 vdc). Record the indication.

28. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

29. Perform the following DSKY operations:

VERB 36	ENTR

30. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±0.5) vdc. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

31. Perform the calculations on the calculation sheet and complete the data sheets.

32. Upon completion of data sheets, make a copy of data sheets and forward immediately to:

REFERENCES

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION: This procedure tests the Gyro Compassing capabilities of the G & N System. The test is is computer controlled. The system is erected with the X Gyro Northeast, the Y Gyro Southeast, and the Z Gyro down. The output of the X and Y PIPA's is used to hold the platform vertical. The Y PIPA and X Gyro comprise the compassing loop. The X and Y gyro elevation errors and the Z gyro azimuth error are checked after a two hour settling period and every 15 minutes thereafter for a period of 3 hours, using optical verification. The test takes approximately 5 hours to perform. From the third to the fourth hour, the prime power is set to the LO limit. From the fourth to the fifth hour the prime power is set to the HI limit.

INITIALIZATION

1. Establish a Master Initialization Condition (JDC 12215). Insure that G&N Mounting Fixture is tilted to 32.5°.

VOLTAGE SETTING (NOMINAL)

2. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

ASSY

the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±05) vdc. Record the indication.

TEST ENTRY

3. Perform the following DSKY operations:

VERB 57	ENTR
00006	ENTR

Observe the PROG lamp changes to 01.

4. When VERB 06 and NOUN 61 commence flashing, insure that Row 1 of the DSKY displays +04500. If the display is correct proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations To change only Row 1:

VERB 21	ENTR
+04500	ENTR

6. Perform the following DSKY operation:

VERB 33	ENTR

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays	+18000
Row 2 displays	+XX.XXX (Test site latitude from Table 1)

If the display is correct proceed to step 9, if not proceed to step 8.

8. Perform the following DSKY operations To change only Row 1:

VERB 21	ENTR
+18000	ENTR

To change only Row 2

VERB 22	ENTR
+XX.XXX (Test site latitude from Table 1)	ENTR

9. Perform the following DSKY operations:

VERB 33	ENTR

Observe the PROG lamp changes from 01 after approximately 90 seconds to 05 for approximately 5 minutes, then to 02 for the remainder of the test.

TEST RESULTS AT 2 HRS

10. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall light. After 120 minutes have elapsed since initiation of step 9, set the OPTICS MODE switch on the Indicator Control panel to ZERO.

11. Perform the following DSKY operations:

VERB 52	ENTR

Observe the PROG lamp changes to 03.

TARGET #1 AZ AND ELEV

12. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000

Row 2 displays +00000

If the display is correct proceed to step 14, if not, proceed to step 13.

13. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24	ENTR
+18000	ENTR
+00000	ENTR

14. Perform the following DSKY operation:

TARGET #4 AZ AND ELEV

15. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +13500

Row 2 displays +00000

If display is correct proceed to step 17, if not, proceed to step 16.

16. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24	ENTR
+13500	ENTR
+00000	ENTR

17. Perform the following DSKY operations:

VERB 33	ENTR

MARK ON TARGET #1

18. Set the OPTICS MODE switch on the Indicator Control panel to MAN and the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 180.0° and 32.5° respectively.

19. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT reticle pattern is centered on the target #1 pattern. Press the MARK pushbutton. If MARK was satisfactory, proceed to the next step, if not press MARK REJECT and repeat this step.

MARK ON TARGET #4

20. Set the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 241.0° and 53° respectively.

21. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT reticle pattern is centered on the target #4 pattern. Press the MARK pushbutton. If MARK was satisfactory, press ENTR and proceed to next step, if not, press MARK REJECT and repeat this step.

X, Y, Z GYRO ERRORS

22. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

23. Perform the following DSKY operations:

VERB 34	ENTR

Observe the PROG lamp changes to 02. Set the OPTICS MODE switch to ZERO.

24. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

25. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 25.8 (+0.25, -0 vdc). Record the indication.

30. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±0.5) vdc. Press OPTICS POWER ON pushbutton on Test Control panel and OPTICS POWER ON pushbutton shall go out.

31. Perform the calculations on the calculation sheet and complete the data sheets.

32. Upon completion of data sheets, make a copy of data sheets and forward immediately to:

CALCULATIONS SHEET

Record the latest values of the following coefficients from JDC 12217.

NBDX ( ) ____________
NBDY ( ) ____________
NBDZ ( ) ____________
ADIAZ ( ) ____________
ADSRAY ( ) ____________

Perform the following calculations. Cos λ functions are provided in table 1.

Drift (vert) = NBDZ + ADIAZ
Drift (vert) = ( ) ____________ meru

Drift (east) = .707(NBDY + NBDX + ADSRAY)
Drift (east) = ( ) ____________ meru

IRIG COEFFICIENT AZ ERROR CONTRIBUTION

$$\phi\,(\text{vert}) = \frac{D(\text{vert}) \times \frac{12.8}{\text{Cos}\ \lambda} + D(\text{east}) \times \frac{206}{\text{Cos}\ \lambda}}{3600}$$

ϕ (vert) = ( ) ____________ degrees

Record answer on line aq.

Perform the following calculations

a. line d - line aq	record on line ar
b. line b - line n	record on line as
c. line c - line o	record on line at
d. line d - line p	record on line au

REFERENCES

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION: This procedure tests the Gyro Compassing capabilities of the G & N System. The test is is computer controlled. The system is erected with the X Gyro Northeast, the Y Gyro Southeast, and the Z Gyro down. The output of the X and Y PIPA's is used to hold the platform vertical. The Y PIPA and X Gyro comprise the compassing loop. The X and Y gyro elevation errors and the Z gyro azimuth error are checked after a two hour settling period and every 15 minutes thereafter for a period of 3 hours, using optical verification. The test takes approximately 5 hours to perform. From the third to the fourth hour, the prime power is set to the LO limit. From the fourth to the fifth hour the prime power is set to the HI limit.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization condition. Insure that G&N Mounting Fixture is tilted to 32.5°.

VOLTAGE SETTING (NOMINAL)

2. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

---

the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±0.5) vdc. Record the indication.

TEST ENTRY

3. Perform the following DSKY operations:

VERB 57 ENTR
00006 ENTR

Observe the PROG lamp changes to 01.

4. When VERB 06 and NOUN 61 commence flashing, insure that Row 1 of the DSKY displays +04500. If the display is correct proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations To change only Row 1:

VERB 21 ENTR
+04500 ENTR

6. Perform the following DSKY operation:

VERB 33 ENTR

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000
Row 2 displays +XX.XXX (Test site latitude from Table 1)

If the display is correct proceed to step 9, if not proceed to step 8.

8. Perform the following DSKY operations To change only Row 1:

VERB 21 ENTR
+18000 ENTR

To change only Row 2

VERB 22 ENTR
+XX.XXX (Test site latitude from Table 1) ENTR

9. Perform the following DSKY operations:

VERB 33 ENTR

Observe the PROG lamp changes from 01 after approximately 90 seconds to 05 for approximately 5 minutes, then to 02 for the remainder of the test.

TEST RESULTS AT 2 HRS

10. Press to light OPTICS POWER ON pushbutton on Test Control panel. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

NOTE: Perform step 11 when 120 minutes has elapsed since initiation of step 9. Complete steps 11 through 23 as rapidly as possible. Recommended time for completion of these steps is three minutes.

11. Perform the following DSKY operations:

VERB 52 ENTR

Observe the PROG lamp changes to 03.

TARGET #1 AZ AND ELEV

12. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000
Row 2 displays +00000

If the display is correct proceed to step 14, if not, proceed to step 13.

---

13. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24 ENTR
+18000 ENTR
+00000 ENTR

14. Perform the following DSKY operation:

VERB 33 ENTR

TARGET #4 AZ AND ELEV

15. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +13500
Row 2 displays +00000

If display is correct proceed to step 17, if not, proceed to step 16.

16. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24 ENTR
+13500 ENTR
+00000 ENTR

17. Perform the following DSKY operations:

VERB 33 ENTR

MARK ON TARGET #1

18. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF, set OPTICS MODE switch to MAN, and set OPTICS SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 180.0° and 32.5° respectively.

19. Set the OPTICS SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT reticle pattern is centered on the target #1 pattern. Press the MARK pushbutton. If MARK was satisfactory, proceed to the next step, if not press MARK REJECT and repeat this step.

MARK ON TARGET #4

20. Set the OPTICS SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 241.0° and 53° respectively.

21. Set OPTICS SPEED switch to LO. Using Optics Hand Controller, drive the optics until the SXT reticle pattern is centered on the target #4 pattern. Press the MARK pushbutton.

21A. If MARK was satisfactory in previous step, press ENTR pushbutton on DSKY and proceed to next step; if not, press MARK REJECT pushbutton on Indicator Control panel and repeat step 21 and this step.

X, Y, Z GYRO ERRORS

22. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

23. Perform the following DSKY operations:

VERB 34 ENTR

Observe the PROG lamp changes to 02. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

24. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

25. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 25.8 (+0.25, -0 vdc). Record the indication.

26. Repeat step 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (HI BUS)

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 31.8 (+0, -0.25 vdc). Record the indication.

28. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

29. Perform the following DSKY operations:

VERB 36 ENTR

30. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28.8 (±0.5) vdc. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

31. Perform the calculations on the calculation sheet and complete the data sheets.

32. Upon completion of data sheets, make a copy of data sheets and forward immediately to:

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION: This procedure tests the gyrocompassing capabilities of the G and N system. The IMU stable member is coarse aligned to place the X gyro approximately northeast, the Y gyro approximately southeast, and the Z gyro approximately vertical and down. The gyros are then torqued at earth rate for the remainder of the test.

After five minutes of Vertical Erect (Major Mode 05), where the outputs of the X and Y PIPA's are used to position the Z gyro closer to vertical, gyrocompassing (Major Mode 02) is automatically initiated. During gyrocompassing the outputs of the X and Y PIPA's are used by the computer to calculate torquing commands to all three gyros in order to hold the stable member in a constant attitude with respect

JDC 12222 REV J PAGE 2 OF 6

SUBSYSTEM G&N SYSTEM

ASSY

to the earth. The system is gyrocompassed at nominal bus voltage for the first 4 1/2 hours then at low bus voltage for one hour and at high bus voltage for one hour. CDU data is recorded approximately every ten minutes for the duration of the test (about 6 1/2 hours) to evaluate the dynamics of the gyrocompass. At the four hour point the accuracy of the gyrocompass is determined by using the Optical Verification Routine (Major Mode 03).

IMPORTANT: 1. When a specific time is given for performing procedural steps, such times must be adhered to within plus or minus one minute.

2. When time is to be recorded on data sheets, record the time to the nearest minute.

3. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization Condition. Insure that G&N Mounting Fixture is tilted to 32.5°.

VOLTAGE SETTING (NOMINAL)

2. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control Panel until DVM indicates 28.8 (±0.5) vdc. Record indication.

TEST ENTRY

3. Perform the following DSKY operations:

a. VERB 57 ENTR

b. 00006 ENTR

c. Observe the PROG lamp changes to 01.

4. When VERB 06 and NOUN 61 commence flashing, insure that Row 1 of DSKY displays +04500. If display is correct, proceed to step 6; if not, proceed to step 5.

5. Perform the following DSKY operations to change only Row 1:

a. VERB 21 ENTR

b. +04500 ENTR

6. Perform the following DSKY operations:

VERB 33 ENTR

7. When VERB 06 and NOUN 61 commence flashing, insure that DSKY displays the following:

a. Row 1 +18000

DATE 30 JUN 66

JOB GYRO COMPASSING

SUBSYSTEM G & N SYSTEM

ASSY

b. Row 2 +XX.XX (Test site latitude from Table 1)

If display is correct, proceed to step 9; if not, proceed to step 8.

8. Perform the following DSKY operations:

To change only Row 1--

VERB 21 ENTR

+18000 ENTR

To change only Row 2--

VERB 22 ENTR

+XX.XXX (Test site latitude from Table 1) ENTR

9. Perform the following DSKY operation:

VERB 33 ENTR

Observe PROG lamp changes from 01 after approximately 90 seconds to 05 for approximately 5 minutes, then to 02. Record exact time of day PROG lamp changes to 02, then proceed immediately to step 10.

RECORDING CDU ANGLES

10. Perform the following DSKY operations:

a. VERB 06 NOUN 20 ENTR

b. Record time of ENTR.

c. Record Row 1, Row 2, and Row 3 indications.

Repeat a, b, and c above at ten minute intervals for the remainder of the test. Adhere to the ten minute intervals as closely as possible without interferring with the time requirements of steps 11, 28, and 29.

TEST RESULTS AT FOUR HOURS

NOTE: Perform step 11 four hours after the time recorded in step 9. Complete steps 11 through 27 as rapidly as possible. Recommended time for completion of these steps is three minutes.

11. Press to light OPTICS POWER ON pushbutton on Test Control panel. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

12. Perform the following DSKY operation:

VERB 52 ENTR

Observe PROG lamp changes to 03.

13. When VERB 06 and NOUN 61 commence flashing, insure that DSKY displays the following:

a. Row 1 +18000

b. Row 2 +00000

If display is correct, proceed to step 15; if not, proceed to step 14.

14. Perform the following DSKY operations to change Row 1 and Row 2:

a. VERB 24 ENTR

b. +18000 ENTR

c. +00000 ENTR

DATE 30 JUN 63

15. Perform the following DSKY operation:

VERB 33 ENTR

16. When VERB 06 and NOUN 61 commence flashing, insure that DSKY displays the following:

a. Row 1 +13500

b. Row 2 +00000

If display is correct proceed to step 18; if not, proceed to step 17.

17. Perform the following DSKY operations to change Row 1 and Row 2:

a. VERB 24 ENTR

b. +13500 ENTR

c. +00000 ENTR

18. Perform the following DSKY operation:

VERB 33 ENTR

19. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF. Set OPTICS MODE switch to MAN, and set OPTICS SPEED switch to HI. Using Optics Hand Controller, drive optics until Shaft and Trunnion counters on TPAC indicate 180.0° and 32.5° respectively.

20. Set OPTICS SPEED switch to LO. Using Optics Hand Controller, drive optics until SXT reticle pattern is centered on target #1 pattern. Press MARK pushbutton. If MARK was satisfactory, proceed to next step; if not, press MARK REJECT and repeat this step.

21. Set the OPTICS SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 241.0° and 53° respectively.

22. Set OPTICS SPEED switch to LO. Using Optics Hand Controller drive optics until SXT reticle pattern is centered on target #4 pattern. Press MARK pushbutton.

23. If MARK was satisfactory in previous step, press ENTR pushbutton on DSKY and proceed to next step; if not, press MARK REJECT pushbutton on Indicator Control panel and repeat step 22 and this step.

X, Y, Z GYRO ERRORS

24. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

25. Perform the following DSKY operation:

VERB 34 ENTR

Observe the PROG lamp changes to 02.

26. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

27. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

NOTE: Perform step 28 4-1/2 hours after the time recorded in step 9.

28. Set CROSSBAR CONTROL on the

DATE 30 JUN 66

Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 25.8 (+0.25, -0 vdc). Record indication and time.

GYRO COMPASSING, VOLTAGE MARGIN (HI BUS)

NOTE: Perform step 29 5-1/2 hours after the time recorded in step 9.

29. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 31.8 (+0, -0.25 vdc). Record indication and time.

TEST TERMINATION

NOTE: Perform step 30 6-1/2 hours after the time recorded in step 9.

30. Perform the following DSKY operation:

VERB 36 ENTR

31. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 28.8 (±0.5) vdc.

CALCULATIONS

32. Record most recent values of BD_X, BD_Y, BD_Z, $ADIA_Z$ $ADSRA_Y$, A_{B_X}, and A_{B_Y} from JDC 12217 in CALCULATIONS portion of data sheets.

33. Calculate and record leveling error contributed by A_{B_Y} as θ_X and leveling error contributed by A_{B_X} as θ_Y as follows:

a. $\theta_X = \dfrac{-57.3\ A_{B_Y}}{g}$ degrees

b. $\theta_Y = \dfrac{57.3\ A_{B_X}}{g}$ degrees

where g is local gravity obtained from Table 2.

34. Calculate and record azimuth error contributed by IRIG drift as θ_Z as follows:

$$\theta_Z = \frac{D(vert) \times \frac{12.8}{\cos\lambda} + D(east) \frac{206}{\cos\lambda} \text{ deg}}{3600}$$

where: $D(vert) = BD_Z + ADIA_Z$ meru, $D(east) = .707(BD_Y + BD_X + ADSRA_Y)$ meru, and cos λ is cosine of test site latitude obtained from Table 1.

35. Calculate and record compensated X and Y leveling errors at four hour point as follows:

a. Compensated X leveling error = Row 1 indication of step 24 - θ_X degrees

b. Compensated Y leveling error = Row 2 indication of step 24 - θ_Y degrees

36. Calculate compensated Z azimuth error at four hour point as follows:

Z azimuth error = Row 3 indication of step 24 - θ_Z degrees

---

37. Calculate maximum data spread of all XCDU (Row 1) data recorded between 2 hours and 4 hours after the time recorded in step 9.

38. Calculate maximum data spread of all YCDU (Row 2) data recorded between 2 hours and 4 hours after the time recorded in step 9.

39. Calculate maximum data spread of all ZCDU (Row 3) data recorded between 2 hours and 4 hours after the time recorded in step 9.

40. Calculate maximum data spread of all XCDU (Row 1) data recorded between the time recorded in step 28 and the time recorded in step 29.

41. Calculate maximum data spread of all YCDU (Row 2) data recorded between the time recorded in step 28 and the time recorded in step 29.

42. Calculate maximum data spread of all ZCDU (Row 3) data recorded between the time recorded in step 28 and the time recorded in step 29.

43. Calculate maximum data spread of all XCDU (Row 1) data recorded after the time recorded in step 29.

44. Calculate maximum data spread of all YCDU (Row 2) data recorded after the time recorded in step 29.

45. Calculate maximum data spread of all ZCDU (Row 3) data recorded after the time recorded in step 29.

46. Upon completion of data sheets, make a copy of data sheets and forward immediately to:

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION: This procedure tests the gyrocompassing capabilities of the G and N system. The IMU stable member is coarse aligned to place the X gyro approximately northeast, the Y gyro approximately southeast, and the Z gyro approximately vertical and down. The gyros are then torqued at earth rate for the remainder of the test.

After five minutes of Vertical Erect (Major Mode 05), where the outputs of the X and Y PIPA's are used to position the Z gyro closer to vertical, gyrocompassing (Major Mode 02) is automatically initiated. During gyrocompassing the outputs of the X and Y PIPA's are used by the computer to calculate torquing commands to all three gyros in order to hold the stable member in a constant attitude with respect

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 30 JUN 66

---

to the earth. The system is gyrocompassed at nominal bus voltage for the first 4 1/2 hours then at low bus voltage for one hour and at high bus voltage for one hour. CDU data is recorded approximately every ten minutes for the duration of the test (about 6 1/2 hours) to evaluate the dynamics of the gyrocompass. At the four hour point the accuracy of the gyrocompass is determined by using the Optical Verification Routine (Major Mode 03).

IMPORTANT: 1. When a specific time is given for performing procedural steps, such times must be adhered to within plus or minus one minute.

2. When time is to be recorded on data sheets, record the time to the nearest minute.

3. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

4. The TRUNNION TPAC on the OUA must indicate between 0 and 5 degrees before the OUA is commanded to zero. Manipulate the Optics Hand Controller on the Indicator Control panel vertically to drive the trunnion axis in a decreasing direction until the TRUNNION TPAC indicates between 0 and 5 degrees. The OPTICS SPEED switch may be adjusted to facilitate positioning the trunnion axis. Do not drive the trunnion axis through zero to the negative limit stop.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization Condition. Insure that G&N Mounting Fixture is tilted to 32.5°.

VOLTAGE SETTING (NOMINAL)

2. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control Panel until DVM indicates 28.8 (±0.5) vdc. Record indication.

TEST ENTRY

3. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00006 ENTR

DATE 30 JUN 66

---

c. Observe the PROG lamp changes to 01.

4. When VERB 06 and NOUN 61 commence flashing, insure that Row 1 of DSKY displays +04500. If display is correct, proceed to step 6; if not, proceed to step 5.

5. Perform the following DSKY operations to change only Row 1:

a. VERB 21 ENTR
b. +04500 ENTR

6. Perform the following DSKY operations:

VERB 33 ENTR

7. When VERB 06 and NOUN 61 commence flashing, insure that DSKY displays the following:

a. Row 1 +18000
b. Row 2 +XX.XXX (Test site latitude from Table 1)

If display is correct, proceed to step 9; if not, proceed to step 8.

8. Perform the following DSKY operations:

To change only Row 1--

VERB 21 ENTR
+18000 ENTR

To change only Row 2--

VERB 22 ENTR
+XX.XXX (Test site latitude from Table 1) ENTR

9. Perform the following DSKY operation:

VERB 33 ENTR

Observe PROG lamp changes from 01 after approximately 90 seconds to 05 for approximately 5 minutes, then to 02. Record exact time of day PROG lamp changes to 02, then proceed immediately to step 10.

RECORDING CDU ANGLES

10. Perform the following DSKY operations:

a. VERB 06 NOUN 20 ENTR
b. Record time of ENTR.
c. Record Row 1, Row 2, and Row 3 indications.

Repeat a, b, and c above at ten minute intervals for the remainder of the test. Adhere to the ten minute intervals as closely as possible without interfering with the time requirements of steps 11, 28, and 29.

TEST RESULTS AT FOUR HOURS

NOTE: Perform step 11 four hours after the time recorded in step 9. Complete steps 11 through 27 as rapidly as possible. Recommended time for completion of these steps is three minutes.

11. Press to light OPTICS POWER ON pushbutton on Test Control panel. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

12. Perform the following DSKY

DATE 30 JUN 66

---

operation:

VERB 52 ENTR

Observe PROG lamp changes to 03.

13. When VERB 06 and NOUN 61 commence flashing, insure that DSKY displays the following:

a. Row 1 +18000
b. Row 2 +00000

If display is correct, proceed to step 15; if not, proceed to step 14.

14. Perform the following DSKY operations to change Row 1 and Row 2:

a. VERB 24 ENTR
b. +18000 ENTR
c. +00000 ENTR

15. Perform the following DSKY operation:

VERB 33 ENTR

16. When VERB 06 and NOUN 61 commence flashing, insure that DSKY displays the following:

a. Row 1 +13500
b. Row 2 +00000

If display is correct proceed to step 18; if not, proceed to step 17.

17. Perform the following DSKY operations to change Row 1 and Row 2:

a. VERB 24 ENTR
b. +13500 ENTR
c. +00000 ENTR

18. Perform the following DSKY operation:

VERB 33 ENTR

19. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF. Set OPTICS MODE switch to MAN, and set OPTICS SPEED switch to HI. Using Optics Hand Controller, drive optics until Shaft and Trunnion counters on TPAC indicate 180.0° and 32.5° respectively.

20. Set OPTICS SPEED switch to LO. Using Optics Hand Controller, drive optics until SXT reticle pattern is centered on target #1 pattern. Press MARK pushbutton. If MARK was satisfactory, proceed to next step; if not, press MARK REJECT and repeat this step.

21. Set the OPTICS SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 241.0° and 53° respectively.

22. Set OPTICS SPEED switch to LO. Using Optics Hand Controller drive optics until SXT reticle pattern is centered on target #4 pattern. Press MARK pushbutton.

23. If MARK was satisfactory in previous step, press ENTR pushbutton on DSKY and proceed to next step; if not, press MARK REJECT pushbutton on Indicator Control panel and repeat step 22 and this step.

X, Y, Z GYRO ERRORS

24. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

25. Perform the following DSKY operation:

VERB 34 ENTR

Observe the PROG lamp changes to 02.

DATE 30 JUN 66

26. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

27. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

NOTE: Perform step 28 4-1/2 hours after the time recorded in step 9.

28. Set CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 25.8 (+0.25, -0 vdc). Record indication and time.

GYRO COMPASSING, VOLTAGE MARGIN (HI BUS)

NOTE: Perform step 29 5-1/2 hours after the time recorded in step 9.

29. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 31.8 (+0, -0.25 vdc). Record indication and time.

TEST TERMINATION

NOTE: Perform step 30 6-1/2 hours after the time recorded in step 9.

30. Perform the following DSKY operation:

VERB 36 ENTR

31. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 28.8 (±0.5) vdc.

CALCULATIONS

32. Record most recent values of BD_X, BD_Y, BD_Z, $ADIA_Z$ $ADSRA_Y$, A_{B_X}, and A_{B_Y} from JDC 12217 in CALCULATIONS portion of data sheets.

33. Calculate and record leveling error contributed by A_{B_Y} as θ_X and leveling error contributed by A_{B_X} as θ_Y as follows:

a. $$\theta_X = \frac{-57.3\ A_{B_Y}}{g} \text{ degrees}$$

b. $$\theta_Y = \frac{57.3\ A_{B_X}}{g} \text{ degrees}$$

where g is local gravity obtained from Table 2.

34. Calculate and record azimuth error contributed by IRIG drift as θ_Z as follows:

$$\theta_Z = \frac{D(\text{vert}) \times \dfrac{12.8}{\cos\lambda} + D(\text{east}) \dfrac{206}{\cos\lambda \text{ deg}}}{3600}$$

where: $D(\text{vert}) = BD_Z + ADIA_Z$ meru, $D(\text{east}) = .707(BD_Y + BD_X + ADSRA_Y)$ meru, and $\cos\lambda$ is cosine of test site latitude obtained from Table 1.

35. Calculate and record compensated X and Y leveling errors at four hour point as follows:

a. Compensated X leveling error = Row 1 indication of step 24 - θ_X degrees

b. Compensated Y leveling error = Row 2 indication of step 24 - θ_Y degrees

---

36. Calculate compensated Z azimuth error at four hour point as follows:

Z azimuth error = Row 3 indication of step 24 - θ_Z degrees

37. Calculate maximum data spread of all XCDU (Row 1) data recorded between 2 hours and 4 hours after the time recorded in step 9.

38. Calculate maximum data spread of all YCDU (Row 2) data recorded between 2 hours and 4 hours after the time recorded in step 9.

39. Calculate maximum data spread of all ZCDU (Row 3) data recorded between 2 hours and 4 hours after the time recorded in step 9.

40. Calculate maximum data spread of all XCDU (Row 1) data recorded between the time recorded in step 28 and the time recorded in step 29.

41. Calculate maximum data spread of all YCDU (Row 2) data recorded between the time recorded in step 28 and the time recorded in step 29.

42. Calculate maximum data spread of all ZCDU (Row 3) data recorded between the time recorded in step 28 and the time recorded in step 29.

43. Calculate maximum data spread of all XCDU (Row 1) data recorded after the time recorded in step 29.

44. Calculate maximum data spread of all YCDU (Row 2) data recorded after the time recorded in step 29.

45. Calculate maximum data spread of all ZCDU (Row 3) data recorded after the time recorded in step 29.

46. Upon completion of data sheets, make a copy of data sheets and forward immediately to:

INTERVAL

TOOLS AND MATERIAL

DESCRIPTION: This procedure tests the gyrocompassing capabilities of the G and N system. The IMU stable member is coarse aligned to place the X gyro approximately northeast, the Y gyro approximately southeast, and the Z gyro approximately vertical and down. The gyros are then torqued at earth rate for the remainder of the test. After five minutes of Vertical Erect (Major Mode 05), where the outputs of the X and Y PIPA's are used to position the Z gyro closer to vertical, gyrocompassing (Major Mode 02) is automatically initiated. During gyrocompassing the outputs of the X and Y PIPA's are used by the computer to calculate torquing commands to all three gyros in order to hold the stable member in a constant attitude with respect to the earth. The system is gyrocompassed at nominal bus voltage for the first 4 1/2 hours then at low bus voltage for one hour and at high bus

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

voltage for one hour. CDU data is recorded approximately every ten minutes for the duration of the test (about 6 1/2 hours) to evaluate the dynamics of the gyrocompass. At the four hour point the accuracy of the gyrocompass is determined by using the Optical Verification Routine (Major Mode 03).

IMPORTANT: 1. When a specific time is given for performing procedural steps, such times must be adhered to within plus or minus one minute.

2. When time is to be recorded on data sheets, record the time to the nearest minute.

3. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

4. The TRUNNION TPAC on the OUA must indicate between 0 and 5 degrees before the OUA is commanded to zero. Manipulate the Optics Hand Controller on the Indicator Control panel vertically to drive the trunnion axis in a decreasing direction until the TRUNNION TPAC indicates between 0 and 5 degrees. The OPTICS SPEED switch may be adjusted to facilitate positioning the trunnion axis. Do not drive the trunnion axis through zero to the negative limit stop.

5. Insure that cable W226 is removed and connector assembly (2003099) is connected to CGC Test Connector.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization Condition. Insure that G&N Mounting Fixture is tilted to 32.5°.

VOLTAGE SETTING (NOMINAL)

2. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control Panel until DVM indicates 28.8 (±0.5) vdc. Record indication.

TEST ENTRY

3. Perform the following DSKY operations:

a. VERB 57 ENTR
b. 00006 ENTR

---

c. Observe the PROG lamp changes to 01.

4. When VERB 06 and NOUN 61 commence flashing, insure that Row 1 of DSKY displays +04500. If display is correct, proceed to step 6; if not, proceed to step 5.

5. Perform the following DSKY operations to change only Row 1:

a. VERB 21 ENTR
b. +04500 ENTR

6. Perform the following DSKY operations:

VERB 33 ENTR

7. When VERB 06 and NOUN 61 commence flashing, insure that DSKY displays the following:

a. Row 1 +18000
b. Row 2 +XX.XXX (Test site latitude from Table 1)

If display is correct, proceed to step 9; if not, proceed to step 8.

8. Perform the following DSKY operations:

To change only Row 1--
VERB 21 ENTR
+18000 ENTR

To change only Row 2--
VERB 22 ENTR
+XX.XXX (Test site latitude from Table 1) ENTR

9. Perform the following DSKY operation:

VERB 33 ENTR

Observe PROG lamp changes from 01 after approximately 90 seconds to 05 for approximately 5 minutes, then to 02. Record exact time of day PROG lamp changes to 02, then proceed immediately to step 10.

RECORDING CDU ANGLES

10. Perform the following DSKY operations:

a. VERB 06 NOUN 20 ENTR
b. Record time of ENTR.
c. Record Row 1, Row 2, and Row 3 indications.

Repeat a, b, and c above at ten minute intervals for the remainder of the test. Adhere to the ten minute intervals as closely as possible without interfering with the time requirements of steps 11, 28, and 29.

TEST RESULTS AT FOUR HOURS

NOTE: Perform step 11 four hours after the time recorded in step 9. Complete steps 11 through 27 as rapidly as possible. Recommended time for completion of these steps is three minutes.

11. Press to light OPTICS POWER ON pushbutton on Test Control panel. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

12. Perform the following DSKY

---

operation:

VERB 52 ENTR

Observe PROG lamp changes to 03.

13. When VERB 06 and NOUN 61 commence flashing, insure that DSKY displays the following:

a. Row 1 +18000
b. Row 2 +00000

If display is correct, proceed to step 15; if not, proceed to step 14.

14. Perform the following DSKY operations to change Row 1 and Row 2:

a. VERB 24 ENTR
b. +18000 ENTR
c. +00000 ENTR

15. Perform the following DSKY operation:

VERB 33 ENTR

16. When VERB 06 and NOUN 61 commence flashing, insure that DSKY displays the following:

a. Row 1 +13500
b. Row 2 +00000

If display is correct proceed to step 18; if not, proceed to step 17.

17. Perform the following DSKY operations to change Row 1 and Row 2:

a. VERB 24 ENTR
b. +13500 ENTR
c. +00000 ENTR

18. Perform the following DSKY operation:

VERB 33 ENTR

19. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF. Set OPTICS MODE switch to MAN, and set OPTICS SPEED switch to HI. Using Optics Hand Controller, drive optics until Shaft and Trunnion counters on TPAC indicate 180.0° and 32.5° respectively.

20. Set OPTICS SPEED switch to LO. Using Optics Hand Controller, drive optics until SXT reticle pattern is centered on target #1 pattern. Press MARK pushbutton. If MARK was satisfactory, proceed to next step; if not, press MARK REJECT and repeat this step.

21. Set the OPTICS SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 241.0° and 53° respectively.

22. Set OPTICS SPEED switch to LO. Using Optics Hand Controller drive optics until SXT reticle pattern is centered on target #4 pattern. Press MARK pushbutton.

23. If MARK was satisfactory in previous step, press ENTR pushbutton on DSKY and proceed to next step; if not, press MARK REJECT pushbutton on Indicator Control panel and repeat step 22 and this step.

X, Y, Z GYRO ERRORS

24. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

25. Perform the following DSKY operation:

VERB 34 ENTR

Observe the PROG lamp changes to 02.

26. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

27. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

NOTE: Perform step 28 4-1/2 hours after the time recorded in step 9.

28. Set CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 25.8 (+0.25, -0 vdc). Record indication and time.

GYRO COMPASSING, VOLTAGE MARGIN (HI BUS)

NOTE: Perform step 29 5-1/2 hours after the time recorded in step 9.

29. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 31.8 (+0, -0.25 vdc). Record indication and time.

TEST TERMINATION

NOTE: Perform step 30 6-1/2 hours after the time recorded in step 9.

30. Perform the following DSKY operation:

VERB 36 ENTR

31. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 28.8 (±0.5) vdc.

CALCULATIONS

32. Record most recent values of BD_X, BD_Y, BD_Z, $ADIA_Z$ $ADSRA_Y$, A_{B_X}, and A_{B_Y} from JDC 12217 in CALCULATIONS portion of data sheets.

33. Calculate and record leveling error contributed by A_{B_Y} as θ_X and leveling error contributed by A_{B_X} as θ_Y as follows:

a. $\theta_X = \dfrac{-57.3\ A_{B_Y}}{g}$ degrees

b. $\theta_Y = \dfrac{57.3\ A_{B_X}}{g}$ degrees

where g is local gravity obtained from Table 2.

34. Calculate and record azimuth error contributed by IRIG drift as θ_Z as follows:

$$\theta_Z = \frac{D(vert) \times \dfrac{12.8}{\cos\lambda} + D(east)\ \dfrac{206}{\cos\lambda\ deg}}{3600}$$

where: $D(vert) = BD_Z + ADIA_Z$ meru,
$D(east) = .707(BD_Y + BD_X + ADSRA_Y)$ meru, and $\cos\lambda$ is cosine of test site latitude obtained from Table 1.

35. Calculate and record compensated X and Y leveling errors at four hour point as follows:

a. Compensated X leveling error = Row 1 indication of step 24 - θ_X degrees

---

b. Compensated Y leveling error = Row 2 indication of step 24 - θ_Y degrees

36. Calculate compensated Z azimuth error at four hour point as follows:

Z azimuth error = Row 3 indication of step 24 - θ_Z degrees

37. Calculate maximum data spread of all XCDU (Row 1) data recorded between 2 hours and 4 hours after the time recorded in step 9.

38. Calculate maximum data spread of all YCDU (Row 2) data recorded between 2 hours and 4 hours after the time recorded in step 9.

39. Calculate maximum data spread of all ZCDU (Row 3) data recorded between 2 hours and 4 hours after the time recorded in step 9.

40. Calculate maximum data spread of all XCDU (Row 1) data recorded between the time recorded in step 28 and the time recorded in step 29.

41. Calculate maximum data spread of all YCDU (Row 2) data recorded between the time recorded in step 28 and the time recorded in step 29.

42. Calculate maximum data spread of all ZCDU (Row 3) data recorded between the time recorded in step 28 and the time recorded in step 29.

43. Calculate maximum data spread of all XCDU (Row 1) data recorded after the time recorded in step 29.

44. Calculate maximum data spread of all YCDU (Row 2) data recorded after the time recorded in step 29.

45. Calculate maximum data spread of all ZCDU (Row 3) data recorded after the time recorded in step 29.

46. Upon completion of data sheets, make a copy of data sheets and forward immediately to:

DESCRIPTION: This procedure tests the gyrocompassing capabilities of the G and N system. The IMU stable member is coarse aligned to place the X gyro approximately northeast, the Y gyro approximately southeast, and the Z gyro approximately vertical and down. The gyros are then torqued at earth rate for the remainder of the test. After five minutes of Vertical Erect (Major Mode 05), where the outputs of the X and Y PIPA's are used to position the Z gyro closer to vertical, gyrocompassing (Major Mode 02) is automatically initiated. During gyrocompassing the outputs of the X and Y PIPA's are used by the computer to calculate torquing commands to all three gyros in order to hold the stable member in a constant attitude with respect to the earth. The system is gyrocompassed at nominal bus voltage for the first 4 1/2 hours then at low bus voltage for one hour and at high bus

VERIFICATION WITH SIDL REQUIRED BEFORE USE

SUBSYSTEM G & N SYSTEM

ASSY

voltage for one hour. CDU data is recorded approximately every ten minutes for the duration of the test (about 6 1/2 hours) to evaluate the dynamics of the gyrocompass. At the four hour point the accuracy of the gyrocompass is determined by using the Optical Verification Routine (Major Mode 03).

IMPORTANT: 1. When a specific time is given for performing procedural steps, such times must be adhered to within plus or minus one minute.

2. When time is to be recorded on data sheets, record the time to the nearest minute.

3. Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

4. The TRUNNION TPAC on the OUA must indicate between 0 and 5 degrees before the OUA is commanded to zero. Manipulate the Optics Hand Controller on the Indicator Control panel vertically to drive the trunnion axis in a decreasing direction until the TRUNNION TPAC indicates between 0 and 5 degrees. The OPTICS SPEED switch may be adjusted to facilitate positioning the trunnion axis. Do not drive the trunnion axis through zero to the negative limit stop.

5. Insure that cable W226 is removed and connector assembly (2003099) or Restart Monitor module (2898989) is connected to CGC Test Connector.

INITIALIZATION

1. Perform JDC 12215 to establish a Master Initialization Condition. Insure that G&N Mounting Fixture is tilted to 32.5°.

VOLTAGE SETTING (NOMINAL)

2. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control Panel until DVM indicates 28.8 (±0.5) vdc. Record indication.

TEST ENTRY

3. Perform the following DSKY operations:

a. VERB 57 ENTR

b. 00006 ENTR

DATE 30 JUN 66

JOB GYRO COMPASSING

JDC 12222 REV M PAGE 3 OF 7

SUBSYSTEM G&N SYSTEM

ASSY

c. Observe the PROG lamp changes to 01.

4. When VERB 06 and NOUN 61 commence flashing, insure that Row 1 of DSKY displays +04500. If display is correct, proceed to step 6; if not, proceed to step 5.

5. Perform the following DSKY operations to change only Row 1:

a. VERB 21 ENTR

b. +04500 ENTR

6. Perform the following DSKY operations:

VERB 33 ENTR

7. When VERB 06 and NOUN 61 commence flashing, insure that DSKY displays the following:

a. Row 1 +18000

b. Row 2 +XX.XXX (Test site latitude from Table 1)

If display is correct, proceed to step 9; if not, proceed to step 8.

8. Perform the following DSKY operations:

To change only Row 1--

VERB 21 ENTR

+18000 ENTR

To change only Row 2--

VERB 22 ENTR

+XX.XXX (Test site latitude from Table 1) ENTR

9. Perform the following DSKY operation:

VERB 33 ENTR

Observe PROG lamp changes from 01 after approximately 90 seconds to 05 for approximately 5 minutes, then to 02. Record exact time of day PROG lamp changes to 02, then proceed immediately to step 10.

RECORDING CDU ANGLES

10. Perform the following DSKY operations:

a. VERB 06 NOUN 20 ENTR

b. Record time of ENTR.

c. Record Row 1, Row 2, and Row 3 indications.

Repeat a, b, and c above at ten minute intervals for the remainder of the test. Adhere to the ten minute intervals as closely as possible without interfering with the time requirements of steps 11, 28, and 29.

TEST RESULTS AT FOUR HOURS

NOTE: Perform step 11 four hours after the time recorded in step 9. Complete steps 11 through 27 as rapidly as possible. Recommended time for completion of these steps is three minutes.

11. Press to light OPTICS POWER ON pushbutton on Test Control panel. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

12. Perform the following DSKY

DATE 30 JUN 66

JOB GYRO COMPASSING

JDC 12222 REV M PAGE 4 OF 7

SUBSYSTEM G&N SYSTEM

ASSY

operation:

VERB 52 ENTR

Observe PROG lamp changes to 03.

13. When VERB 06 and NOUN 61 commence flashing, insure that DSKY displays the following:

a. Row 1 +18000

b. Row 2 +00000

If display is correct, proceed to step 15; if not, proceed to step 14.

14. Perform the following DSKY operations to change Row 1 and Row 2:

a. VERB 24 ENTR

b. +18000 ENTR

c. +00000 ENTR

15. Perform the following DSKY operation:

VERB 33 ENTR

16. When VERB 06 and NOUN 61 commence flashing, insure that DSKY displays the following:

a. Row 1 +13500

b. Row 2 +00000

If display is correct proceed to step 18; if not, proceed to step 17.

17. Perform the following DSKY operations to change Row 1 and Row 2:

a. VERB 24 ENTR

b. +13500 ENTR

c. +00000 ENTR

18. Perform the following DSKY operation:

VERB 33 ENTR

19. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF. Set OPTICS MODE switch to MAN, and set OPTICS SPEED switch to HI. Using Optics Hand Controller, drive optics until Shaft and Trunnion counters on TPAC indicate 180.0° and 32.5° respectively.

20. Set OPTICS SPEED switch to LO. Using Optics Hand Controller, drive optics until SXT reticle pattern is centered on target #1 pattern. Press MARK pushbutton. If MARK was satisfactory, proceed to next step; if not, press MARK REJECT and repeat this step.

21. Set the OPTICS SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 241.0° and 53° respectively.

22. Set OPTICS SPEED switch to LO. Using Optics Hand Controller drive optics until SXT reticle pattern is centered on target #4 pattern. Press MARK pushbutton.

23. If MARK was satisfactory in previous step, press ENTR pushbutton on DSKY and proceed to next step; if not, press MARK REJECT pushbutton on Indicator Control panel and repeat step 22 and this step.

X, Y, Z GYRO ERRORS

24. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

25. Perform the following DSKY operation:

VERB 34 ENTR

Observe the PROG lamp changes to 02.

DATE 30 JUN 66

26. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

27. Press to extinguish OPTICS POWER ON pushbutton on Test Control panel.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

NOTE: Perform step 28 4-1/2 hours after the time recorded in step 9.

28. Set CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 25.8 (+0.25, -0 vdc). Record indication and time.

GYRO COMPASSING, VOLTAGE MARGIN (HI BUS)

NOTE: Perform step 29 5-1/2 hours after the time recorded in step 9.

29. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 31.8 (+0, -0.25 vdc). Record indication and time.

TEST TERMINATION

NOTE: Perform step 30 6-1/2 hours after the time recorded in step 9.

30. Perform the following DSKY operation:

VERB 36 ENTR

31. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 28.8 (±0.5) vdc.

NOTE: Step 31A applies only when Restart Monitor module (2898989) is installed.

31A. Perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR

b. 00077 ENTR

c. The contents of Row 1 shall be 00000.

CALCULATIONS

32. Record most recent values of BD_X, BD_Y, BD_Z, $ADIA_Z$ $ADSRA_Y$, A_{B_X}, and A_{B_Y} from JDC 12217 in CALCULATIONS portion of data sheets.

33. Calculate and record leveling error contributed by A_{B_Y} as θ_X and leveling error contributed by A_{B_X} as θ_Y as follows:

a. $\theta_X = \dfrac{-57.3\ A_{B_Y}}{g}$ degrees

b. $\theta_Y = \dfrac{57.3\ A_{B_X}}{g}$ degrees

where g is local gravity obtained from Table 2.

---

34. Calculate and record azimuth error contributed by IRIG drift as θ_Z as follows:

$$\theta_Z = \frac{D(vert) \times \dfrac{12.8}{\cos\lambda} + D(east)\ \dfrac{206}{\cos\lambda}\ deg}{3600}$$

where: $D(vert) = BD_Z + ADIA_Z$ meru,
$D(east) = .707(BD_Y + BD_X + ADSRA_Y)$ meru, and cos λ is cosine of test site latitude obtained from Table 1.

35. Calculate and record compensated X and Y leveling errors at four hour point as follows:

a. Compensated X leveling error = Row 1 indication of step 24 - θ_X degrees

b. Compensated Y leveling error = Row 2 indication of step 24 - θ_Y degrees

36. Calculate compensated Z azimuth error at four hour point as follows:

Z azimuth error = Row 3 indication of step 24 - θ_Z degrees

37. Calculate maximum data spread of all XCDU (Row 1) data recorded between 2 hours and 4 hours after the time recorded in step 9.

38. Calculate maximum data spread of all YCDU (Row 2) data recorded between 2 hours and 4 hours after the time recorded in step 9.

39. Calculate maximum data spread of all ZCDU (Row 3) data recorded between 2 hours and 4 hours after the time recorded in step 9.

40. Calculate maximum data spread of all XCDU (Row 1) data recorded between the time recorded in step 28 and the time recorded in step 29.

41. Calculate maximum data spread of all YCDU (Row 2) data recorded between the time recorded in step 28 and the time recorded in step 29.

42. Calculate maximum data spread of all ZCDU (Row 3) data recorded between the time recorded in step 28 and the time recorded in step 29.

43. Calculate maximum data spread of all XCDU (Row 1) data recorded after the time recorded in step 29.

44. Calculate maximum data spread of all YCDU (Row 2) data recorded after the time recorded in step 29.

45. Calculate maximum data spread of all ZCDU (Row 3) data recorded after the time recorded in step 29.

46. Upon completion of data sheets, make a copy of data sheets and forward immediately to:

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION See below.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL		
			JDC	D.S.	MIT	NASA	REFERENCES
							IMPORTANT
							INTERVAL
							TOOLS AND MATERIAL

DESCRIPTION: This procedure tests the Gyro Compassing capabilities of the G & N System. The test is is computer controlled. The system is erected with the X Gyro Northeast, the Y Gyro Southeast, and the Z Gyro down. The output of the X and Y PIPA's is used to hold the platform vertical. The Y PIPA and X Gyro comprise the compassing loop. The X and Y gyro elevation errors and the Z gyro azimuth error are checked after a two hour settling period and every 15 minutes thereafter for a period of 3 hours, using optical verification. The test takes approximately 5 hours to perform. From the third to the fourth hour, the prime power is set to the LO limit. From the fourth to the fifth hour the prime power is set to the HI limit.

INITIALIZATION

1. Establish a Master Initialization Condition.

VOLTAGE SETTING (NOMINAL)

2. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ________

---

the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28 (±0.25) vdc. Record the indication.

TEST ENTRY

3. Perform the following DSKY operations:

VERB 57	ENTR
00006	ENTR

Observe the PROG lamp changes to 01.

4. When VERB 06 and NOUN 61 commence flashing, insure that Row 1 of the DSKY displays +04500. If the display is correct proceed to step 6, if not proceed to step 5.

5. Perform the following DSKY operations:

To change only Row 1:

VERB 21	ENTR
+04500	ENTR

6. Perform the following DSKY operation:

VERB 33	ENTR

7. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays	+18000
Row 2 displays	+XX.XXX (Test site latitude from Table 1)

If the display is correct proceed to step 9 if not proceed to step 8

8. Perform the following DSKY operations.

To change only Row 1:

VERB 21	ENTR
+18000	ENTR

To change only Row 2

VERB 22	ENTR
+XX.XXX (Test site latitude from Table 1)	ENTR

9. Perform the following DSKY operations:

VERB 33	ENTR

Observe the PROG lamp changes to 01 for approximately 90 seconds then to 05 for approximately 15 minutes, then to 02 for the duration of this test.

TEST RESULTS AT 2 HRS

10. After 120 minutes have elapsed since initiation of step 9, set the OPTICS MODE switch on the Indicator Control panel to ZERO.

11. Perform the following DSKY operations:

Enter VERB 52	ENTR

Observe the PROG lamp changes to 03.

TARGET #1 AZ AND ELEV

12. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +18000
Row 2 displays +00000

If the display is correct proceed to step 14, if not, proceed to step 13.

13. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24	ENTR
+18000	ENTR
+00000	ENTR

14. Perform the following DSKY operation:

VERB 33	ENTR

TARGET #4 AZ AND ELEV

15. When VERB 06 and NOUN 61 commence flashing, insure that the DSKY displays the following:

Row 1 displays +13500
Row 2 displays +00000

DATE ________

If display is correct proceed to step 17 if not, proceed to step 16

16. Perform the following DSKY operations. To change Row 1 and Row 2:

VERB 24	ENTR
+13500	ENTR
+00000	ENTR

17. Perform the following DSKY operations:

VERB 33	ENTR

MARK ON TARGET #1

18. Set the OPTICS MODE switch on the Indicator Control panel to MAN and the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 180.0° and 32.5° respectively.

19. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #1. Press the MARK pushbutton. If MARK was satisfactory, proceed to the next step, if not press MARK REJECT and repeat this step.

MARK ON TARGET #4

20. Set the CONTROLLER SPEED switch to HI. Using the Optics Hand Controller, drive the optics until the Shaft and Trunnion counters on the TPAC indicate 241.0° and 53° respectively.

21. Set the CONTROLLER SPEED switch to LO. Using the Optics Hand Controller, drive the optics until the SXT central horizontal reticle line is centered on the horizontal reticle line and dot of target #4. Press the MARK pushbutton. If MARK was satisfactory, press ENTR and proceed to the next step, if not, press MARK REJECT and repeat this step.

X, Y, Z GYRO ERRORS

22. Observe VERB 06 and NOUN 60 are displayed. Record Row 1, Row 2, and Row 3 indications.

23. Perform the following DSKY operations:

VERB 34	ENTR

Observe the PROG lamp changes to 02. Set the OPTICS MODE switch to ZERO.

24. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (LO BUS)

25. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 25.8 (+0.25, -0 vdc). Record the indication.

26. Repeat step 11 through 23 for the next hour at 15 minute intervals.

GYRO COMPASSING, VOLTAGE MARGIN (HI BUS)

27. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 31.8 (+0, -0.25 vdc). Record the indication.

28. Repeat steps 11 through 23 for the next hour at 15 minute intervals.

DATE ________

---

29. Perform the following DSKY operations:

VERB 36	ENTR

30. Set the CROSSBAR CONTROL on the Primary Signal Selector panel to 173. Adjust the G & N POWER ADJUST control on the Test Control panel until the DVM indicates 28 (±.25 vdc).

31. Perform the calculations on the calculation sheet and complete the data sheets.

32. Upon completion of data sheets, make a copy of data sheets and forward immediately to:

REFERENCES

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL See below.

IMPORTANT: To prevent the introduction of errors by bumping of the theodolite or tripod, or by movement of the theodolite during adjustment, alignment of both the plate and collimation levels should be checked immediately before each reading.

TOOLS AND MATERIAL:
1) 0° autocollimator assembly, part number 1017380
2) 45° autocollimator assembly, part number 1017381
3) Theodolite and support assembly, part number 1017447 or Theodolite 1017444 with suitable mounting base
4) Alignment reference device (adjustable mirror, part number 1017377)
5) Sextant alignment bar, (see figure 1)
6) Vertical leveling mirror, part number 1017445

VERIFICATION WITH SIDL REQUIRED BEFORE USE DATE

A. PREPARATION

NOTE: Refer to figure 3, throughout this procedure for placement of targets and lines-of-sight. Reference to targets is as follows:

TARGET No. 1 5-inch autocollimator, part number 1017410

TARGET No. 2 2-1/2-inch autocollimator, part number 1017435

TARGET No. 3 2-1/2-inch autocollimator, part number 1017448

TARGET No. 4 2-1/2-inch autocollimator, part number 1017448

NOTE: Initial alignment of the optical targets is accomplished by performing this complete procedure and must be performed prior to testing the first G&N system. Periodic alignment of the optical targets is accomplished by performing steps A.6, A.7, B.3 through B.7, B.16 through B.24, B.33 through B.44, C.1 and C.2. Periodic alignment is required when testing each G&N System as indicated on applicable flowgram.

1. Place the 0° autocollimator assembly on G&N system 0° pier such that the autocollimators are pointing north. Insert and engage the three holding screws and flat washers.

2. Place the 45° autocollimator assembly on G&N system 45° pier such that the autocollimators are pointing north-west. Insert and engage the three holding screws and flat washers.

3. Install sextant alignment bar on the north side of the G&N Mounting Fixture Cradle with the target marks facing the 0° target pier and with Target no. 1 marks to the west. See figure 2.

4. Set the tilt axis of the G&N Mounting Fixture Cradle to 0°.

5. Set the micrometer drums on TARGET Nos. 1, 2, 3, and 4 to 10 minutes 0 seconds. Set the azimuth adjust knobs to mid-range.

6. Record certified azimuth (α) of facility azimuth reference.

7. Position the alignment reference device to the north-west of the 0° target pier and such that the line-of-sight intersects TARGET nos. 1, 2, 3, and 4 lines-of-sight and the azimuth reference line-of-sight.

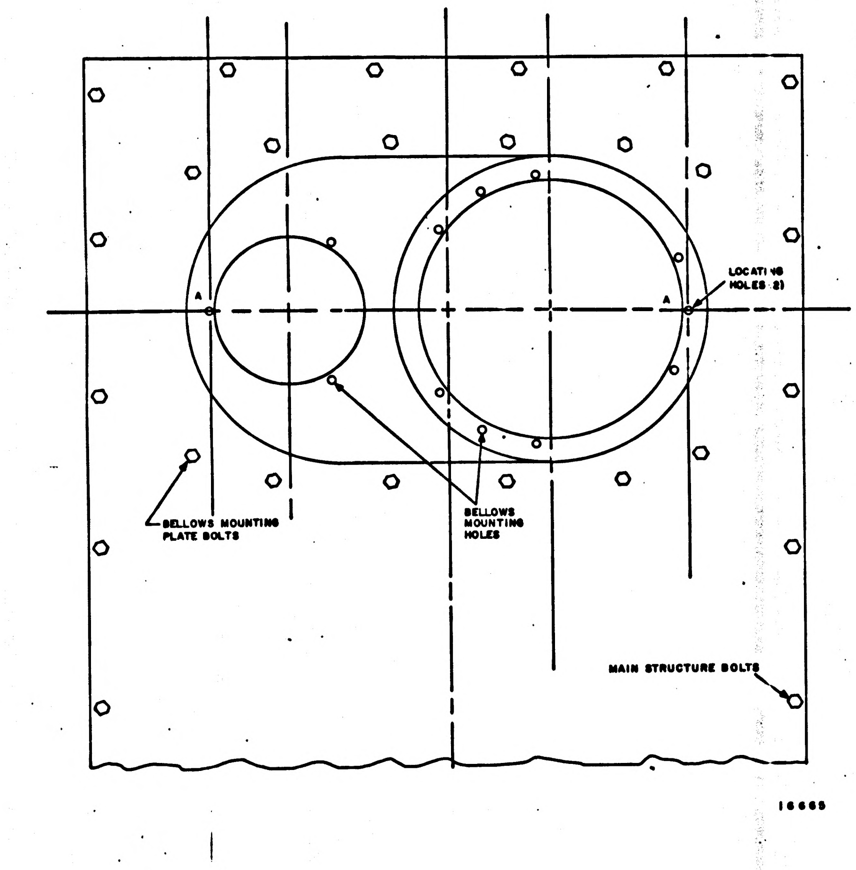

Figure 2. Block II Fixture Back Plate Configuration

DATE

B. PROCEDURE

1. Align the 0° autocollimator assembly laterally by aligning TARGET No. 1 to the sextant alignment bar Target no. 1 scribe marks as follows:

NOTE: Use the eyepiece from TARGET No. 2 as the auxiliary eyepiece.

- a. Hold the auxiliary eyepiece over TARGET No. 1 eyepiece and focus the auxiliary eyepiece on the sextant alignment bar.
- b. Position the 0° autocollimator assembly laterally until the two Target no. 1 scribe marks on the sextant alignment bar are positioned at equal distances from the edges of the autocollimator objective lens as viewed through the auxiliary eyepiece.
- c. Tighten the 0° autocollimator assembly holding screws.

2. Align the 45° autocollimator assembly laterally by aligning TARGET No. 3 to the sextant alignment bar Target no. 3 scribe marks as follows:

- a. Hold the auxiliary eyepiece over TARGET No. 3 eyepiece and focus the auxiliary eyepiece on the sextant alignment bar.
- b. Position the 45° autocollimator assembly laterally until the two Target no. 3 scribe marks on the sextant alignment bar are positioned at equal distances from the edges of the autocollimator objective lens as viewed through the auxiliary eyepiece.
- c. Tighten the 45° autocollimator assembly holding screws.

3. Position the theodolite at the intersection of the lines-of-sight of the azimuth reference device and alignment reference device.

4. Level the theodolite base to the plate spirit level and the theodolite telescope to the altitude level. Adjust the objective focus to infinity.

5. Measure the angle between the azimuth reference device and the alignment reference device lines-of-sight as follows:

- a. Align the theodolite in azimuth to the azimuth reference device. Record the theodolite horizontal scale reading.
- b. Align the theodolite in azimuth to the alignment reference device. Record the theodolite horizontal scale reading.
- c. Calculate and record the angle (β) between the azimuth reference device and alignment reference device lines-of-sight.
- d. Rotate the theodolite telescope 180° on its horizontal axis and then 180° on its vertical axis such that the telescope is inverted and pointed at the alignment reference device.

DATE

e. Align the theodolite in azimuth to the alignment reference device. Record the theodolite horizontal scale reading.

f. Align the theodolite in azimuth to the azimuth reference device. Record the theodolite horizontal scale reading.

g. Calculate and record the angle (β) between the azimuth reference device and alignment reference device lines-of-sight.

h. Rotate the theodolite telescope 180° on its horizontal axis and then 180° on its vertical axis such that the telescope is pointing at the azimuth reference device.

i. Increase the theodolite horizontal circle scale reading by 180°.

6. Repeat step B.5 two times to obtain four measurements of the angle (β) between the azimuth reference device and alignment reference device lines-of-sight. Calculate and record the average ($\bar{\beta}$) of the four measurements.

7. Calculate and record the azimuth (γ) of the alignment reference device using the following formula:

$$\gamma = 180 - (\bar{\beta} - \alpha)$$

where: $\bar{\beta}$ = Angle between azimuth reference and alignment reference device lines-of-sight recorded in step B.6.

α = Azimuth of facility azimuth reference.

8. Position the theodolite at the intersection of the lines-of-sight of TARGET No. 1 and the alignment reference device.

9. Level the theodolite base to the plate spirit level and the theodolite telescope to the altitude level.

10. Align the theodolite in azimuth to the alignment reference device. Record the horizontal scale reading of the theodolite.

11. Rotate the theodolite through the angle recorded in step B.7 toward TARGET No. 1. Record the horizontal scale reading of the theodolite.

12. Align TARGET No. 1 in elevation and azimuth as follows:

a. Level TARGET No. 1 using the vertical leveling mirror.

b. Sighting through TARGET No. 1, adjust the azimuth of TARGET No. 1 until the projected reticle pattern of the theodolite is superimposed on TARGET No. 1 reticle.

c. Repeat a and b as necessary until no further adjustment in elevation and azimuth is required.

13. Remove the theodolite from TARGET No. 1 line-of-sight.

14. Hold the auxiliary eyepiece on TARGET No. 1 standard eyepiece and ascertain that both Target No. 1 scribe marks on the

DATE ________

---

sextant alignment bar are within TARGET No. 1 field-of-view as viewed through the auxiliary eyepiece. Repeat steps B.1 and B.8 through B.12, if necessary, until the Target no. 1 scribe marks are within TARGET No. 1 field-of-view after performing step B.12.

15. Scribe a mark on the fixed plate of the 0° target pier in line with the scribe mark on the 0° autocollimator assembly.

16. Position the theodolite at the intersection of the lines-of-sight of TARGET No. 1 and the alignment reference device.

17. Level the theodolite base to the plate spirit level and the theodolite telescope to the altitude level.

18. Measure the angle ($\theta 1$) between the alignment reference device line-of-sight and TARGET No. 1 line-of-sight as follows:

a. Align the theodolite in azimuth to the alignment reference device. Record the theodolite horizontal scale reading.

b. Align the theodolite in azimuth to TARGET No. 1. Record the theodolite horizontal scale reading.

c. Calculate and record the angle ($\theta 1$) between the alignment reference device and TARGET No. 1 line-of-sight.

d. Rotate the theodolite telescope 180° on its horizontal axis and then 180° on its vertical axis such that the telescope is inverted and pointed at TARGET No. 1.

e. Align the theodolite in azimuth to TARGET No. 1. Record the theodolite horizontal scale reading.

f. Align the theodolite in azimuth to the alignment reference device. Record the theodolite horizontal scale reading.

g. Calculate and record the angle ($\theta 1$) between TARGET No. 1 and the alignment reference device line-of-sight.

h. Rotate the theodolite telescope 180° on its horizontal axis and then 180° on its vertical axis such that the telescope is pointing at the alignment reference device.

i. Increase the theodolite horizontal circle scale reading by 45°.

19. Repeat step B.18 8 times to obtain 16 measurements of the angle ($\theta 1$) between TARGET No. 1 and the alignment reference device lines-of-sight. Calculate and record the average ($\bar{\theta} 1$) of the 16 measurements.

20. Position the theodolite at the intersection of the lines-of-sight of TARGET No. 2 and the alignment reference device.

21. Level the theodolite base to the plate spirit level and the telescope to the altitude level.

22. Align the theodolite in azimuth to the alignment reference device. Record the horizontal scale reading of the theodolite.

23. Rotate the theodolite through the angle ($\bar{\theta} 1$) recorded in step B.19 toward TARGET

DATE ________

No. 2. Record the horizontal scale reading of the theodolite.

24. Align TARGET No. 2 in elevation and azimuth as follows:

a. Level TARGET No. 2 using the vertical leveling mirror.

b. Sighting through TARGET No. 2, adjust the azimuth of TARGET No. 2 until the projected reticle pattern of the theodolite is superimposed on TARGET No. 2 reticle.

c. Repeat a and b as necessary until no further adjustment in elevation and azimuth is required.

25. Position the theodolite at the intersection of the lines-of-sight of TARGET No. 3 and the alignment reference device.

26. Level the theodolite base to the plate spirit level and the telescope to the altitude level.

27. Align the theodolite in azimuth to the alignment reference device. Record the horizontal scale reading of the theodolite.

28. Rotate the theodolite through the angle ($\bar{\theta} 1$) recorded in step B.19 plus 45°0'0" toward TARGET No. 3. Record the horizontal scale reading of the theodolite.

29. Align TARGET No. 3 in elevation and azimuth as follows:

a. Level TARGET No. 3 using the vertical leveling mirror.

b. Sighting through TARGET No. 3, adjust the azimuth of TARGET No. 3 until the projected reticle pattern of the theodolite is superimposed on TARGET No. 3 reticle.

c. Repeat a and b as necessary until no further adjustment in elevation and azimuth is required.

30. Remove the theodolite from TARGET No. 3 line-of-sight.

31. Hold the auxiliary eyepiece over TARGET No. 3 standard eyepiece and ascertain that both Target No. 3 scribe marks on the sextant alignment bar are within TARGET No. 3 field-of-view. Repeat steps B.2 and B.25 through B.29, if necessary, until the Target no. 3 scribe marks are within TARGET No. 3 field-of-view after performing step B.29.

32. Scribe a mark on the fixed plate of the 45° target pier in line with scribe mark on 45° autocollimator assembly.

33. Position the theodolite at the intersection of the lines-of-sight of TARGET No. 3 and the alignment reference device.

34. Level the theodolite base to the plate spirit level and the telescope to the altitude level.

35. Measure the angle ($\theta 3$) between the

DATE ________

---

alignment reference device line-of-sight and TARGET No. 3 line-of-sight as follows:

a. Align the theodolite in azimuth to the alignment reference device. Record the theodolite horizontal scale reading.

b. Align the theodolite in azimuth to TARGET No. 3. Record the theodolite horizontal scale reading.

c. Calculate and record the angle ($\theta 3$) between the alignment reference device line-of-sight and TARGET No. 3 line-of-sight.

d. Rotate the theodolite telescope 180° on its horizontal axis and then 180° on its vertical axis such that the telescope is inverted and pointed at TARGET No. 3.

e. Align the theodolite in azimuth to TARGET No. 3. Record the theodolite horizontal scale reading.

f. Align the theodolite to the alignment reference device. Record the theodolite horizontal scale reading.

g. Calculate and record the angle ($\theta 3$) between TARGET No. 3 and the alignment reference device line-of-sight.

h. Rotate the theodolite telescope 180° on its horizontal axis and then 180° on its vertical axis such that the telescope is pointing at the alignment reference device.

i. Increase the theodolite horizontal circle scale reading by 45°.

36. Repeat step B.35 8 times to obtain 16 measurements of the angle ($\theta 3$) between TARGET No. 3 and the alignment reference device lines-of-sight. Calculate and record the average ($\bar{\theta} 3$) of the 16 measurements.

37. Position the theodolite at the intersection of the lines-of-sight of TARGET No. 4 and the alignment reference device.

38. Level the theodolite base to the plate spirit level and the telescope to the altitude level.

39. Align the theodolite in azimuth to the alignment reference device. Record the horizontal scale reading of the theodolite.

40. Rotate the theodolite through the angle ($\bar{\theta} 3$) recorded in step B.36 toward TARGET No. 4. Record the horizontal scale reading of the theodolite.

41. Align TARGET No. 4 in elevation and azimuth as follows:

a. Level TARGET No. 4 using the vertical leveling mirror.

b. Sighting through TARGET No. 4, adjust the azimuth of TARGET No. 4 until the projected reticle pattern of the theodolite is superimposed on TARGET No. 4 reticle.

c. Repeat a and b as necessary until no further adjustment in elevation and azimuth is required.

DATE ________

42. Measure the angle (θ4) between the alignment reference device line-of-sight and TARGET No. 4 line-of-sight as follows:
   a. Align the theodolite in azimuth to the alignment reference device. Record the theodolite horizontal scale reading.
   b. Align the theodolite in azimuth to TARGET No. 4. Record the theodolite horizontal scale reading.
   c. Calculate and record the angle (θ4) between the alignment reference device and TARGET No. 4 lines-of-sight.
   d. Rotate the theodolite telescope 180° on its horizontal axis and then 180° on its vertical axis such that the telescope is inverted and pointed at TARGET No. 4.
   e. Align the theodolite in azimuth to TARGET No. 4. Record the theodolite horizontal scale reading.
   f. Align the theodolite in azimuth to the alignment reference device. Record the theodolite horizontal scale reading.
   g. Calculate and record the angle (θ 4) between TARGET No. 4 and the alignment reference device lines-of-sight.
   h. Rotate the theodolite telescope 180° on its horizontal axis and then 180° on its vertical axis such that the telescope is pointing at the alignment reference device.
   i. Increase the theodolite horizontal circle scale reading by 90°.

43. Repeat step B.42 four times to obtain eight measurements of the angle (θ4) between the alignment reference device line-of-sight and TARGET No. 4 line-of-sight. Calculate and record the average ($\bar{\theta}4$) of the eight measurements.

44. Remove the theodolite, sextant alignment bar, and alignment reference device.

C. CALCULATIONS

1. Calculate and record the included angle (ϕ3) between the lines-of-sight of TARGET No. 1 and TARGET No. 3 using the following formula:

$$\phi 3 = |\bar{\theta}3 - \bar{\theta}1|$$

2. Calculate and record the included angle (ϕ4) between the lines-of-sight of TARGET No. 1 and TARGET No. 4 using the following formula:

$$\phi 4 = |\bar{\theta}4 - \bar{\theta}1|$$

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV. A PAGE 1 OF 10

INITIAL TDRR 32758 D.S. PGS. 7

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY.

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Assembly. Functional operation is evaluated by checking Signal Conditioner Assembly input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G & N test configuration for maximum checkout capability.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

NOTE: The items marked (≠) are applicable only for SCA P/N 2007235 and are to be omitted for SCA P/N 2007234.

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

2. Position SCA in output above DSKY on right side of cradle front panel assembly with SCA connectors facing bracket assembly, P/N 2900919, and attach with six captive screws. Torque screws finger tight.

3. Position SCA Deutsch connectors J1, J2, and J3 in bracket assembly 2900919 (observe placarding on bracket assembly for connector locations) and attach with hex nuts supplied with each connector. Torque hex nuts finger tight.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

3. Connect GNF harness connectors P7, P8, and P9 to SCA connectors J2, J1, and J3 respectively.

4. Perform JDC 12204 to advance G & N system to STANDBY mode.

5. Connect jumper between PROBES OUTPUT DIRECT jacks and DVM IN jacks on Auxiliary Input Panel.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Connect PSA Test Point Adapter (TPA-2) direct probes to TB5 jack 26 (high) and TB5 jack 30 (low).

7. Set the Primary Signal Selector Voltmeter Input DVM to AUX position.

8. Adjust G & N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28 (±0.25) vdc.

NOTE: The 28 vdc bus will cycle with the Heater Cycle.

9. Press OPTICS POWER ON pushbutton on Test Control panel.

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCA GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL switches on Primary Signal Selector panel to 271.

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit on Test Selector Panel Position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last two digits.

2. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
101	28 vdc CGC operate
102	28 vdc IMU standby
203	28 vdc optics operate

CMC WARNING

3. Set Test Selector panel to 204.

4. Perform CMC warning lamp test by entering VERB 35 into DSKY and pressing ENTR pushbutton.

5. Record that the CMC lamp on the GNIC panel lights and then extinguishes. Record the DVM reading after the CMC lamp has extinguished.

PIPA G/S OUTPUT

6. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA G/S output
CHANNEL 5 to 1	Y PIPA G/S output
CHANNEL 6 to 1	X PIPA G/S output
CHANNEL 8 to 4	SCA GDB stepper switch

7. Insure that CH AC indicators are lighted for channels 4, 5, and 6.

8. Zero Oscillograph channels 4, 5, and 6 and set gains at 500 mv/mm. Set gain of channel 8 at 2 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

9. Insure that PROCEED indicator of PROCEED/ISS OPERATE pushbutton on Test Control panel is lighted.

---

10. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

11. Obtain Oscillograph record of PIPA loop closure data by performing following steps successively for each position of Test Selector panel listed in table I by performing step 9 through 14.

12. Press PROCEED/ISS OPERATE pushbutton on Test Control panel.

NOTE: Do not wait 90 sec. Immediately go to next step.

13. Press IMU CAGE/COMMAND pushbutton.

14. Wait at least 10 seconds for PIPA loop closure, then press PROCEED/ISS STANDBY pushbutton.

Table I

Test Selector Panel Position	Signal
117	Z PIPA G/S in-phase output
118	Y PIPA G/S in-phase output
119	X PIPA G/S in-phase output

15. Stop Oscillograph. Turn Sensitivity to OFF. Check Oscillograph record for 3 indications of PIPA loop closure on channel 8 correlating to the loop closure indications on channels 4, 5, and 6. Record that traces have centered after loop closure.

POWER SUPPLY AND TEMPERATURE

16. Press PROCEED/ISS OPERATE pushbutton on Test Control panel and wait 90 seconds, for wheel run-up completed, then repeat step A.8.

17. Measure and record the following voltages on the DVM. Measure all the X BAR voltages, then place the Primary Signal Selector to position 271 to measure the corresponding Test Selector panel positions:

Item	Voltage	X Bar	Test Selector Position
a.	120 vdc PIPA supply level	259	103
b.	2.5 vdc TM bias	N/A	104
c.	3200 cps 28V	123	106
d.	800 cps 28V 1% IMU	121	113
≠e.	800 cps 28V 1% Optics	101	128
f.	PIPA temp	255	201
≠g.	IRIG temp	156	202

≠18. Connect TPA-2 direct probes to TB4-21 hi ahd TB5-22 lo. Measure and record X BAR 299 voltage on the DVM.

≠19. Set the Test Selector to position 150 and X BAR to 271. Measure and record the DVM indication.

≠20. Connect TPA-2 direct probes to TB4-20 hi and TB5-33 lo. Measure and record X BAR 299 voltage on DVM.

≠21. Set the Test Selector to position 151 and X BAR to 271. Measure and record the DVM indication.

NOTE: In steps 20 and 21, an indication may or may not be present depending upon blower cycling.

IG, MG, AND OG SERVO ERRORS

22. Perform following DSKY operations:

a.	VERB 57		ENTR
b.	Observe		
	VERB 21	NOUN 01	Flashing
c.	00015		ENTR
d.	VERB 41	NOUN 20	ENTR
e.	Observe		
	VERB 21	NOUN 22	Flashing
f.	+00000		ENTR
g.	Observe		
	VERB 22	NOUN 22	Flashing
h.	+00000		ENTR
i.	Observe		
	VERB 23	NOUN 22	Flashing
j.	+00000		ENTR

23. Set OPTICS MODE switch on GNIC panel to MAN, then to ZERO OPTICS.

24. Connect following signals to Oscillograph by setting following switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 1 to 2	IG servo error
CHANNEL 2 to 2	MG servo error
CHANNEL 3 to 2	OG servo error
CHANNEL 8 to 4	SCA GDB stepper switch

25. Insure that CH 3 AC indicator is lighted.

26. Zero Oscillograph channels 1, 2, and 3 and set gains at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

27. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel.

28. Set switches on Signal Generator as follows:

FUNCTION to SINE
RANGE to X 0.1
FREQUENCY meter to 2

29. Set the Oscillograph Signal Selector Channel 5 to 1 DC. Use the DC BALANCE CONTROL on the Signal Generator to center the trace about zero reference on the Oscillograph.

30. Perform following DSKY operations:

a.	VERB 42	ENTR
b.	VERB 33	ENTR

31. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

32. Set the GIMBAL SERVO TEST switch on the Test Selector panel to the appropriate position.

33. Press TEST START pushbutton on Test Selector panel.

34. Obtain an Oscillograph trace of stabilization loop servo error data by increasing

the Signal Generator AMPLITUDE control to three-fourths of maximum for approximately 10 seconds for each test listed in table II.

Table II

Test	GIMBAL SERVO TEST Switch Position	Test Selector Panel Position	Signal
a	1	137	IG servo error
b	2	138	MG servo error
c	3	139	OG servo error

35. Stop Oscillograph. Turn SENS to OFF. Record ΔV SCA input signals monitored on channels 1, 2, and 3, and ΔV SCA output signals monitored on channel 8.

IG, MG, AND OG TORQUE MOTOR CURRENTS

≠36. Insure that AMPLITUDE control on Signal Generator is set to 0.

≠37. Connect jumper between PROBES OUTPUT DIRECT jacks and CH 6 DC IN jacks on Auxiliary Input Panel.

≠38. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to AUX.

≠39. Zero Oscillograph channel 6 and set gain at 0.1 v/cm. Set gain of channel 8 at 1 v/cm and position channel 8 trace as near center as possible with a 2.5 dc bias input.

≠40. Set FREQUENCY meter on Signal Generator to 1 and RANGE switch to X1.

≠41. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠42. To monitor Signal Generator output on Oscillograph set the Oscillograph Signal Selector to channel 5-1 DC.

≠43. Obtain Oscillograph trace of torque motor currents by increasing Signal Generator AMPLITUDE control until Oscilloscope indicates value listed in table III for each test. Maintain Signal Generator setting for approximately 10 seconds. For each test, connect PSA TPA direct probes, set Test Selector panel, and set GIMBAL SERVO TEST switch as indicated.

Table III

Test	Signal Generator Output	PSA TPA Test Points		Test Selector Panel Position	GIMBAL SERVO TEST Switch Position	Signal
		High	Low			
a	2V peak-to-peak	TB2-31	TB1-49	132	1	IG torque motor current
b	1V peak-to-peak	TB2-32	TB1-49	133	2	MG torque motor current
c	1V peak-to-peak	TB1-45	TB1-49	134	3	OG torque motor current

---

≠44. Stop Oscillograph. Record ΔV SCA input signal monitored on channel 6 and ΔV SCA output signal monitored on channel 8.

1X RESOLVER SIN AND COS

45. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe
VERB 21 NOUN 22 Flashing
c. +04500 ENTR
d. Observe
VERB 22 NOUN 22 Flashing
e. +04500 ENTR
f. Observe
VERB 23 NOUN 22 Flashing
g. +04500 ENTR

46. Wait 20 seconds after performing step 45, then perform following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

NOTE: Due to IMU drift steps 47.b and 47.c must be performed as rapidly as possible for each test listed in table IV.

47. Connect SCA output and SCA input to DVM for each test listed in table IV. For each test, perform following operations:

a. Set CROSSBAR CONTROL switch to 271.
b. Set Test Selector panel to position listed and record DVM indication.
c. Immediately set CROSSBAR CONTROL switch on Primary Signal Selector panel to position listed and record DVM indication.

48. Perform following DSKY operations:

a. Verb 41 NOUN 20 ENTR
b. Observe
VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe
VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 22 Flashing
g. +00000 ENTR

Table IV

Test	Test Selector Panel Position	CROSSBAR CONTROL Position	Signal
a	120	243	IG 1X resolver cos
b	121	242	MG 1X resolver cos
c	122	241	OG 1X resolver cos
d	123	144	IG 1X resolver sin
e	124	143	MG 1X resolver sin
f	125	142	OG 1X resolver sin

SHAFT AND TRUNNION CDU FINE ERROR

≠49. Set OPTICS switches on Indicator Control panel as follows:

MODE to MAN then to ZERO OPTICS
COUPLING to DIRECT
TELESCOPE TRUNNION to SLAVE to SXT

SPEED to LOW
TRACKER to OFF

≠50. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠51. Connect SCA shaft CDU fine error output to DVM by setting Test Selector panel to 146. Set Primary Signal Selector to X BAR 271.

≠52. Connect jumper between PROBES OUTPUT BUFFERED jacks and PAVM IN jacks on Auxiliary Input Panel.

≠53. Connect SCA shaft CDU fine error input to PAVM by connecting PSA TPA-2 buffered probes to TB3 jack 23 (high) and TB3 jack 34 (low). On Aux Input panel run jumper from Probes output direct to PAVM input, and select PAVM Aux position on Primary Signal Select panel.

≠54. Set OPTICS MODE switch on Indicator Control Panel to MAN.

≠55. Perform following DSKY operations.

a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00011 ENTR

≠56. Position Optics Hand Controller on GNIC Panel to the left until the PAVM indicates 1.0 VAC in phase. Record SCA output indicated on DVM 271.

≠57. Set OPTICS MODE switch to MAN then to ZERO OPTICS.

≠58. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠59. Connect SCA trunnion CDU fine error output to DVM by setting Test Selector panel to 147. Set Primary Signal Selector to X BAR 271.

≠60. Connect SCA trunnion CDU fine error input to PAVM by connecting PSA TPA buffered probes to TB3 jack 22 (high) and TB3 jack 34 (low).

≠61. Repeat steps 54 and 55.

≠62. Position Optics Hand Controller on GNIC panel to a down position until PAVM indicates 1.0 VAC in phase. Record SCA output indicated on DVM 271.

≠63. Set OPTICS MODE switch to MAN then to ZERO OPTICS.

≠64. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠65. Set OPTICS MODE switch on Indicator Control panel to MAN.

≠66. Perform following DSKY operations:

VERB 21 NOUN 10 ENTR
00012 ENTR
00010 ENTR
VERB 21 NOUN 10 ENTR
00012 ENTR
00012 ENTR
VERB 21 NOUN 01 ENTR
00053 ENTR
77100 ENTR
VERB 21 NOUN 01 ENTR
00054 ENTR
77100 ENTR

VERB 21 NOUN 10 ENTR
00014 ENTR
06000 ENTR

67. Connect SCA trunnion CDU DAC output to DVM by setting Test Selector panel to 126 and Primary Signal Selector X BAR to 271. Record DVM indication.

68. Connect SCA shaft CDU DAC output to DVM by setting Test Selector panel to 127 and Primary Signal Selector X BAR to 271. Record DVM indication.

69. Set OPTICS MODE switch on Indicator Control panel to CMC. Wait 10 seconds, then set OPTICS MODE switch to ZERO.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

≠70. Set Test Selector panel to 129.

≠71. Connect SCA SXT Shaft tach input and output signals to Oscillograph by setting switches on Oscillograph Signal Selector panel as follows:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCA GDB stepper switch

≠72. Zero Oscillograph channel 1 and set gain at 20 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠73. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

≠74. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS MODE switch to MAN.

≠75. Hold Optics Hand Controller to left limit not longer than 20 seconds.

≠76. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT shaft tach input and output signals monitored on channels 1 and 8.

≠77. Set Test Selector panel to 148 to connect SCA SCT shaft tach output to Oscillograph.

≠78. Connect SCA SCT shaft tach input to Oscillograph by setting CHANNEL 1 switch on Oscillograph Signal Selector panel to 13.

≠79. Zero Oscillograph channel 1 and set gain at 200 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠80. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠81. Set OPTICS SPEED switch on Indicator Control panel to HI.

≠82. Hold Optics Hand Controller to right limit for approximately 20 seconds.

≠83. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT shaft tach input and output signals monitored on channels 1 and 8.

≠84. Set Test Selector panel to 130 to connect SCA SXT trunnion tach output to Oscillograph.

BLOCK II SIGNAL CONDITIONER
JOB FUNCTIONAL CHECKOUT | JDC 12224 REV A PAGE 9 OF 10
SUBSYSTEM BLOCK II G & N SYSTEM | ASSY

≠85. Connect SCA SXT trunnion tach input to Oscillograph by setting CHANNEL 2 switch on Oscillograph Signal Selector panel to 12.

≠86. Zero Oscillograph channel 2 and set gain at 20 mv/mm. Set gain of channel 8 at v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠87. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠88. Set OPTICS SPEED switch on Indicator Control panel to MED.

≠89. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

≠90. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT trunnion tach input and output signals monitored on channels 2 and 8.

≠91. Set Test Selector panel to 149 to connect SCA SCT trunnion tach output to Oscillograph.

≠92. Connect SCA SCT trunnion tach input to Oscillograph by setting CHANNEL 5 switch on Oscillograph Signal Selector panel to 11.

≠93. Insure that CH 5 AC indicator is lighted.

≠94. Zero Oscillograph channel 5 and set gain at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠95. Set CHART DRIVE switch on Oscillograph Control to MM/SEC.

≠96. Set OPTICS SPEED switch on Indicator Control panel to HI.

≠97. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

≠98. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT trunnion tach input and output signals monitored on channels 5 and 8.

YAW, PITCH, AND ROLL ATTITUDE ERRORS

≠99. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe

BLOCK II SIGNAL CONDITIONER
JOB FUNCTIONAL CHECKOUT

JDC 12224 REV. B PAGE 1 OF 10
INITIAL TDRR 32758 D.S. PGS. 7

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY.

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Assembly. Functional operation is evaluated by checking Signal Conditioner Assembly input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G & N test configuration for maximum checkout capability.

JDC 12204

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: The items marked (≠) are applicable only for SCA P/N 2007235 and are to be omitted for SCA P/N 2007234.

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

2. Position SCA in output above DSKY on right side of cradle front panel assembly with SCA connectors facing bracket assembly, P/N 2900919, and attach with six captive screws. Torque screws finger tight.

3. Position SCA Deutsch connectors J1, J2, and J3 in bracket assembly 2900919 (observe placarding on bracket assembly for connector locations) and attach with hex nuts supplied with each connector. Torque hex nuts finger tight.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

3. Connect GNF harness connectors P7, P8, and P9 to SCA connectors J2, J1, and J3 respectively.

4. Perform JDC 12204 to advance G & N system to STANDBY mode.

5. Connect jumper between PROBES OUTPUT DIRECT jacks and DVM IN jacks on Auxiliary Input Panel.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 26 JAN 67

---

6. Connect PSA Test Point Adapter (TPA-2) direct probes to TB5 jack 26 (high) and TB5 jack 30 (low).

7. Set the Primary Signal Selector Voltmeter Input DVM to AUX position.

8. Adjust G & N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28 (±0.25) vdc.

NOTE: The 28 vdc bus will cycle with the Heater Cycle.

9. Press OPTICS POWER ON pushbutton on Test Control panel.

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCA GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL switches on Primary Signal Selector panel to 271.

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit on Test Selector Panel Position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last two digits.

2. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
101	28 vdc CGC operate
102	28 vdc IMU standby
203	28 vdc optics operate

CMC WARNING

3. Set Test Selector panel to 204.

4. Perform CMC warning lamp test by entering VERB 35 into DSKY and pressing ENTR pushbutton.

5. Record that the CMC lamp on the GNIC panel lights and then extinguishes. Record the DVM reading after the CMC lamp has extinguished.

PIPA G/S OUTPUT

6. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA G/S output
CHANNEL 5 to 1	Y PIPA G/S output
CHANNEL 6 to 1	X PIPA G/S output
CHANNEL 8 to 4	SCA GDB stepper switch

7. Insure that CH AC indicators are lighted for channels 4, 5, and 6.

8. Zero Oscillograph channels 4, 5, and 6 and set gains at 500 mv/mm. Set gain of channel 8 at 2 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

9. Insure that PROCEED indicator of PROCEED/ISS OPERATE pushbutton on Test Control panel is lighted.

---

10. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

11. Obtain Oscillograph record of PIPA loop closure data by performing following steps successively for each position of Test Selector panel listed in table I by performing step 9 through 14.

12. Press PROCEED/ISS OPERATE pushbutton on Test Control panel.

NOTE: Do not wait 90 sec. Immediately go to next step.

13. Press IMU CAGE/COMMAND pushbutton.

14. Wait at least 10 seconds for PIPA loop closure, then press PROCEED/ISS STANDBY pushbutton.

Table I

Test Selector Panel Position	Signal
117	Z PIPA G/S in-phase output
118	Y PIPA G/S in-phase output
119	X PIPA G/S in-phase output

15. Stop Oscillograph. Turn Sensitivity to OFF. Check Oscillograph record for 3 indications of PIPA loop closure on channel 8 correlating to the loop closure indications on channels 4, 5, and 6. Record that traces have centered after loop closure.

POWER SUPPLY AND TEMPERATURE

16. Press PROCEED/ISS OPERATE pushbutton on Test Control panel and wait 90 seconds, for wheel run-up completed, then repeat step A.8.

17. Measure and record the following voltages on the DVM. Measure all the X BAR voltages, then place the Primary Signal Selector to position 271 to measure the corresponding Test Selector panel positions:

Item	Voltage	X Bar	Test Selector Position
a.	120 vdc PIPA supply level	259	103
b.	2.5 vdc TM bias	N/A	104
c.	3200 cps 28V	123	106
d.	800 cps 28V 1% IMU	121	113
≠e.	800 cps 28V 1% Optics	101	128
f.	PIPA temp	255	201
≠g.	IRIG temp	156	202

≠18. Connect TPA-2 direct probes to TB4-21 hi and TB5-22 lo. Measure and record X BAR 299 voltage on the DVM.

≠19. Set the Test Selector to position 150 and X BAR to 271. Measure and record the DVM indication.

≠20. Connect TPA-2 direct probes to TB4-20 hi and TB5-33 lo. Measure and record X BAR 299 voltage on DVM.

≠21. Set the Test Selector to position 151 and X BAR to 271. Measure and record the DVM indication.

NOTE: In steps 20 and 21, an indication may or may not be present depending upon blower cycling.

IG, MG, AND OG SERVO ERRORS

22. Perform following DSKY operations:

a. VERB 57		ENTR
b. Observe		
VERB 21	NOUN 01	Flashing
c. 00015		ENTR
d. VERB 41	NOUN 20	ENTR
e. Observe		
VERB 21	NOUN 22	Flashing
f. +00000		ENTR
g. Observe		
VERB 22	NOUN 22	Flashing
h. +00000		ENTR
i. Observe		
VERB 23	NOUN 22	Flashing
j. +00000		ENTR

23. Set OPTICS MODE switch on GNIC panel to MAN, then to ZERO OPTICS.

24. Connect following signals to Oscillograph by setting following switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 1 to 2	IG servo error
CHANNEL 2 to 2	MG servo error
CHANNEL 3 to 2	OG servo error
CHANNEL 8 to 4	SCA GDB stepper switch

25. Insure that CH 3 AC indicator is lighted.

26. Zero Oscillograph channels 1, 2, and 3 and set gains at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

27. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel.

28. Set switches on Signal Generator as follows:

FUNCTION to SINE
RANGE to X 0.1
FREQUENCY meter to 2

29. Set the Oscillograph Signal Selector Channel 5 to 1 DC. Use the DC BALANCE CONTROL on the Signal Generator to center the trace about zero reference on the Oscillograph.

30. Perform following DSKY operations:

a. VERB 42	ENTR
b. VERB 33	ENTR

31. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

32. Set the GIMBAL SERVO TEST switch on the Test Selector panel to the appropriate position.

33. Press TEST START pushbutton on Test Selector panel.

34. Obtain an Oscillograph trace of stabilization loop servo error data by increasing

the Signal Generator AMPLITUDE control to three-fourths of maximum for approximately 10 seconds for each test listed in table II.

Table II

Test	GIMBAL SERVO TEST Switch Position	Test Selector Panel Position	Signal
a	1	137	IG servo error
b	2	138	MG servo error
c	3	139	OG servo error

35. Stop Oscillograph. Turn SENS to OFF. Record ΔV SCA input signals monitored on channels 1, 2, and 3, and ΔV SCA output signals monitored on channel 8.

IG, MG, AND OG TORQUE MOTOR CURRENTS

≠36. Insure that AMPLITUDE control on Signal Generator is set to 0.

≠37. Connect jumper between PROBES OUTPUT DIRECT jacks and CH 6 DC IN jacks on Auxiliary Input Panel.

≠38. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to AUX.

≠39. Zero Oscillograph channel 6 and set gain at 0.1 v/cm. Set gain of channel 8 at 1 v/cm and position channel 8 trace as near center as possible with a 2.5 dc bias input.

≠40. Set FREQUENCY meter on Signal Generator to 1 and RANGE switch to X1.

≠41. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠42. To monitor Signal Generator output on Oscillograph set the Oscillograph Signal Selector to channel 5-1 DC.

≠43. Obtain Oscillograph trace of torque motor currents by increasing Signal Generator AMPLITUDE control until Oscilloscope indicates value listed in table III for each test. Maintain Signal Generator setting for approximately 10 seconds. For each test, connect PSA TPA direct probes, set Test Selector panel, and set GIMBAL SERVO TEST switch as indicated.

Table III

Test	Signal Generator Output	PSA TPA Test Points		Test Selector Panel Position	GIMBAL SERVO TEST Switch Position	Signal
		High	Low			
a	2V peak-to-peak	TB2-31	TB1-49	132	1	IG torque motor current
b	1V peak-to-peak	TB2-32	TB1-49	133	2	MG torque motor current
c	1V peak-to-peak	TB1-45	TB1-49	134	3	OG torque motor current

≠44. Stop Oscillograph. Record ΔV SCA input signal monitored on channel 6 and ΔV SCA output signal monitored on channel 8.

1X RESOLVER SIN AND COS

45. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe
VERB 21 NOUN 22 Flashing
c. +04500 ENTR
d. Observe
VERB 22 NOUN 22 Flashing
e. +04500 ENTR
f. Observe
VERB 23 NOUN 22 Flashing
g. +04500 ENTR

46. Wait 20 seconds after performing step 45, then perform following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

NOTE: Due to IMU drift steps 47.b and 47.c must be performed as rapidly as possible for each test listed in table IV.

47. Connect SCA output and SCA input to DVM for each test listed in table IV. For each test, perform following operations:

a. Set CROSSBAR CONTROL switch to 271.
b. Set Test Selector panel to position listed and record DVM indication.
c. Immediately set CROSSBAR CONTROL switch on Primary Signal Selector panel to position listed and record DVM indication.

48. Perform following DSKY operations:

a. Verb 41 NOUN 20 ENTR
b. Observe
VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe
VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 22. Flashing
g. +00000 ENTR

Table IV

Test	Test Selector Panel Position	CROSSBAR CONTROL Position	Signal
a	120	243	IG 1X resolver cos
b	121	242	MG 1X resolver cos
c	122	241	OG 1X resolver cos
d	123	144	IG 1X resolver sin
e	124	143	MG 1X resolver sin
f	125	142	OG 1X resolver sin

SHAFT AND TRUNNION CDU FINE ERROR

≠49. Set OPTICS switches on Indicator Control panel as follows:

MODE to MAN then to ZERO OPTICS
COUPLING to DIRECT
TELESCOPE TRUNNION to SLAVE to SXT

SPEED to LOW
TRACKER to OFF

≠50. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠51. Connect SCA shaft CDU fine error output to DVM by setting Test Selector panel to 146. Set Primary Signal Selector to X BAR 271.

≠52. Connect jumper between PROBES OUTPUT BUFFERED jacks and PAVM IN jacks on Auxiliary Input Panel.

≠53. Connect SCA shaft CDU fine error input to PAVM by connecting PSA TPA-2 buffered probes to TB3 jack 23 (high) and TB3 jack 34 (low). On Aux Input panel run jumper from Probes output direct to PAVM input, and select PAVM Aux position on Primary Signal Select panel.

≠54. Set OPTICS MODE switch on Indicator Control Panel to MAN.

≠55. Perform following DSKY operations.

a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00011 ENTR

≠56. Position Optics Hand Controller on GNIC Panel to the left until the PAVM indicates 1.0 VAC in phase. Record SCA output indicated on DVM 271.

≠57. Set OPTICS MODE switch to MAN then to ZERO OPTICS.

≠58. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠59. Connect SCA trunnion CDU fine error output to DVM by setting Test Selector panel to 147. Set Primary Signal Selector to X BAR 271.

≠60. Connect SCA trunnion CDU fine error input to PAVM by connecting PSA TPA buffered probes to TB3 jack 22 (high) and TB3 jack 34 (low).

≠61. Repeat steps 54 and 55.

≠62. Position Optics Hand Controller on GNIC panel to a down position until PAVM indicates 1.0 VAC in phase. Record SCA output indicated on DVM 271.

≠63. Set OPTICS MODE switch to MAN then to ZERO OPTICS.

≠64. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠65. Set OPTICS MODE switch on Indicator Control panel to MAN.

≠66. Perform following DSKY operations:

VERB 21 NOUN 10 ENTR
00012 ENTR
00010 ENTR
VERB 21 NOUN 10 ENTR
00012 ENTR
00012 ENTR
VERB 21 NOUN 01 ENTR
00053 ENTR
77100 ENTR
VERB 21 NOUN 01 ENTR
00054 ENTR
77100 ENTR

VERB 21 NOUN 10 ENTR
00014 ENTR
06000 ENTR

67. Connect SCA trunnion CDU DAC output to DVM by setting Test Selector panel to 126 and Primary Signal Selector X BAR to 271. Record DVM indication.

68. Connect SCA shaft CDU DAC output to DVM by setting Test Selector panel to 127 and Primary Signal Selector X BAR to 271. Record DVM indication.

69. Set OPTICS MODE switch on Indicator Control panel to CMC. Wait 10 seconds, then set OPTICS MODE switch to ZERO.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

≠70. Set Test Selector panel to 129.

≠71. Connect SCA SXT Shaft tach input and output signals to Oscillograph by setting switches on Oscillograph Signal Selector panel as follows:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCA GDB stepper switch

≠72. Zero Oscillograph channel 1 and set gain at 20 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠73. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

≠74. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS MODE switch to MAN.

≠75. Hold Optics Hand Controller to left limit not longer than 20 seconds.

≠76. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT shaft tach input and output signals monitored on channels 1 and 8.

≠77. Set Test Selector panel to 148 to connect SCA SCT shaft tach output to Oscillograph.

≠78. Connect SCA SCT shaft tach input to Oscillograph by setting CHANNEL 1 switch on Oscillograph Signal Selector panel to 13.

≠79. Zero Oscillograph channel 1 and set gain at 200 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠80. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠81. Set OPTICS SPEED switch on Indicator Control panel to HI.

≠82. Hold Optics Hand Controller to right limit for approximately 20 seconds.

≠83. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT shaft tach input and output signals monitored on channels 1 and 8.

≠84. Set Test Selector panel to 130 to connect SCA SXT trunnion tach output to Oscillograph.

#85. Connect SCA SXT trunnion tach input to Oscillograph by setting CHANNEL 2 switch on Oscillograph Signal Selector panel to 12.

#86. Zero Oscillograph channel 2 and set gain at 20 mv/mm. Set gain of channel 8 at v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

#87. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

#88. Set OPTICS SPEED switch on Indicator Control panel to MED.

#89. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

#90. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT trunnion tach input and output signals monitored on channels 2 and 8.

#91. Set Test Selector panel to 149 to connect SCA SCT trunnion tach output to Oscillograph.

#92. Connect SCA SCT trunnion tach input to Oscillograph by setting CHANNEL 5 switch on Oscillograph Signal Selector panel to 11.

#93. Insure that CH 5 AC indicator is lighted.

#94. Zero Oscillograph channel 5 and set gain at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

#95. Set CHART DRIVE switch on Oscillograph Control to MM/SEC.

#96. Set OPTICS SPEED switch on Indicator Control panel to HI.

#97. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

#98. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT trunnion tach input and output signals monitored on channels 5 and 8.

YAW, PITCH, AND ROLL ATTITUDE ERRORS

#99. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe
VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe
VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe
VERB 23 NOUN 22 Flashing
g. +00000 ENTR

#100. Perform following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00060 ENTR

NOTE: ISS warning lamp on Indicator Control panel may light during step 101. Ignore lamp indication.

#101. Perform following DSKY operations:

a. VERB 43 ENTR
b. Observe
VERB 21 NOUN 22 Flashing
c. +01600 ENTR

---

d. Observe
VERB 22 NOUN 22 Flashing
e. +01600 ENTR
f. Observe
VERB 23 NOUN 22 Flashing
g. +01600 ENTR

#102. Connect jumper between PROBES OUTPUT DIRECT jacks and PAVM IN jacks on Auxiliary Input Panel. Set PAVM select switch to Aux position on Primary Signal Select panel.

#103. Connect SCA input to PAVM and SCA output to DVM by connecting PSA TPA direct probes to test points listed in table V and setting Test Selector panel to positions indicated. Record SCA input on PAVM and SCA output on DVM (X BAR 271) for each test.

104. Perform JDC 12204 to turn off G & N system.

105. Perform calculations on data sheets.

Table V

Test	PSA TPA Test Points		Test Selector Panel Position	Signal
	High	Low		
a	TB4-43	TB4-47	116	Roll attitude error
b	TB4-44	TB4-48	114	Yaw attitude error
c	TB4-45	TB4-49	115	Pitch attitude error

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV. C PAGE 1 OF 10

INITIAL TDRR 32758 D.S. PGS 7

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY.

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Assembly. Functional operation is evaluated by checking Signal Conditioner Assembly input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G & N test configuration for maximum checkout capability.

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: The items marked (≠) are applicable only for SCA P/N 2007235 and are to be omitted for SCA P/N 2007234.

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

2. Position SCA in cutout above DSKY on right side of cradle front panel assembly with SCA connectors facing bracket assembly, P/N 2900919, and attach with six captive screws. Torque screws finger tight.

3. Position SCA Deutsch connectors J1, J2, and J3 in bracket assembly 2900919 (observe placarding on bracket assembly for connector locations) and attach with hex nuts supplied with each connector. Torque hex nuts finger tight.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

3. Connect GNF harness connectors P7, P8, and P9 to SCA connectors J2, J1, and J3 respectively.

4. Perform JDC 12204 to advance G & N system to STANDBY mode.

5. Connect jumper between PROBES OUTPUT DIRECT jacks and DVM IN jacks on Auxiliary Input Panel.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 26 JAN 67

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV C PAGE 2 OF 10

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY

6. Connect PSA Test Point Adapter (TPA-2) direct probes to TB5 jack 26 (high) and TB5 jack 30 (low).

7. Set the Primary Signal Selector VOLTMETER INPUT DVM switch to AUX position.

8. Adjust G & N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28 (±0.25) vdc.

NOTE: The 28 vdc bus will cycle with the Heater Cycle.

9. Press OPTICS POWER ON pushbutton on Test Control panel.

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCA GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL switches on Primary Signal Selector panel to 271.

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit on Test Selector Panel Position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last two digits.

2. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
101	28 vdc CGC operate
102	28 vdc IMU standby
203	28 vdc optics operate

CMC WARNING

3. Set Test Selector panel to 204.

4. Perform CMC warning lamp test by entering VERB 35 into DSKY and pressing ENTR pushbutton.

5. Record that the CMC lamp on the GNIC panel lights and then extinguishes. Record the DVM reading after the CMC lamp has extinguished.

PIPA G/S OUTPUT

6. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA G/S output
CHANNEL 5 to 1	Y PIPA G/S output
CHANNEL 6 to 1	X PIPA G/S output
CHANNEL 8 to 4	SCA GDB stepper switch

7. Insure that CH AC indicators are lighted for channels 4, 5, and 6.

8. Zero Oscillograph channels 4, 5, and 6 and set gains at 500 mv/mm. Set gain of channel 8 at 2 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input by offsetting zero line 12 1/2 mm to right of chart centerline.

9. Insure that PROCEED indicator of PROCEED/ISS OPERATE pushbutton on Test Control panel is lighted.

DATE 26 JAN 67

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV C PAGE 3 OF 10

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY

10. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

11. Obtain Oscillograph record of PIPA loop closure data by performing following steps successively for each position of Test Selector panel listed in table I by performing step 9 through 14.

12. Press PROCEED/ISS OPERATE pushbutton on Test Control panel.

NOTE: Do not wait 90 sec. Immediately go to next step.

13. Press IMU CAGE/COMMAND pushbutton.

14. Wait at least 10 seconds for PIPA loop closure, then press PROCEED/ISS STANDBY pushbutton.

Table I

Test Selector Panel Position	Signal
117	Z PIPA G/S in-phase output
118	Y PIPA G/S in-phase output
119	X PIPA G/S in-phase output

15. Stop Oscillograph. Turn Sensitivity to OFF. Check Oscillograph record for 3 indications of PIPA loop closure on channel 8 correlating to the loop closure indications on channels 4, 5, and 6. Record that traces have centered after loop closure.

POWER SUPPLY AND TEMPERATURE

16. Press PROCEED/ISS OPERATE pushbutton on Test Control panel and wait 90 seconds, for wheel run-up completed, then repeat step A.8.

17. Measure and record the following voltages on the DVM. Measure all the X BAR voltages, then place the Primary Signal Selector to position 271 to measure the corresponding Test Selector panel positions.

Item	Voltage	X Bar	Test Selector Position
a.	120 vdc PIPA supply level	259	103
b.	2.5 vdc TM bias	N/A	104
c.	3200 cps 28V	123	106
d.	800 cps 28V 1% IMU	121	113
≠e.	800 cps 28V 1% Optics	101	128
f.	PIPA temp	255	201
≠g.	IRIG temp	156	202

≠18. Connect TPA-2 direct probes to TB4-21 hi and TB5-22 lo. Measure and record X BAR 299 voltage on the DVM.

≠19. Set the Test Selector to position 150 and X BAR to 271. Measure and record the DVM indication.

≠20. Connect TPA-2 direct probes to TB4-20 hi and TB5-33 lo. Measure and record X BAR 299 voltage on DVM.

≠21. Set the Test Selector to position 151 and X BAR to 271. Measure and record the DVM indication.

i.	Observe		
	VERB 23	NOUN 22	Flashing
j.	+00000		ENTR

23. Set OPTICS MODE switch on GNIC panel to MAN, then to ZERO OPTICS.

24. Connect following signals to Oscillograph by setting following switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 1 to 2	IG servo error
CHANNEL 2 to 2	MG servo error
CHANNEL 3 to 2	OG servo error
CHANNEL 8 to 4	SCA GDB stepper switch

25. Insure that CH 3 AC indicator is lighted.

26. Zero Oscillograph channels 1, 2, and 3 and set gains at 50 mv/mm. Set gain of channel 8 at 2 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input by offsetting zero line 12 1/2 mm to right of chart centerline.

27. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel.

28. Set switches on Signal Generator as follows:

FUNCTION to SINE
RANGE to X 0.1
FREQUENCY meter to 2

29. Set the Oscillograph Signal Selector Channel 5 to 1 DC. Use the DC BALANCE CONTROL on the Signal Generator to center the trace about zero reference on the Oscillograph.

30. Perform following DSKY operations:

a.	VERB 42	ENTR
b.	VERB 33	ENTR

31. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

32. Set the GIMBAL SERVO TEST switch on the Test Selector panel to the appropriate position.

33. Press TEST START pushbutton on Test Selector panel.

34. Obtain an Oscillograph trace of stabilization loop servo error data by increasing

DATE 26 JAN 67

the Signal Generator AMPLITUDE control to three-fourths of maximum for approximately 10 seconds for each test listed in table II.

Table II

Test	GIMBAL SERVO TEST Switch Position	Test Selector Panel Position	Signal
a	1	137	IG servo error
b	2	138	MG servo error
c	3	139	OG servo error

35. Stop Oscillograph. Turn SENS to OFF. Record ΔV SCA input signals monitored on channels 1, 2, and 3, and ΔV SCA output signals monitored on channel 8.

IG, MG, AND OG TORQUE MOTOR CURRENTS

≠36. Insure that AMPLITUDE control on Signal Generator is set to 0.

≠37. Connect jumper between PROBES OUTPUT DIRECT jacks and CH 6 DC IN jacks on Auxiliary Input Panel.

≠38. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to AUX.

≠39. Zero Oscillograph channel 6 and set gain at 0.1 v/cm. Set gain of channel 8 at 1 v/cm and position channel 8 trace as near center as possible with a 2.5 dc bias input.

≠40. Set FREQUENCY meter on Signal Generator to 1 and RANGE switch to X1.

≠41. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠42. To monitor Signal Generator output on Oscillograph set the Oscillograph Signal Selector to channel 5-1 DC.

≠43. Obtain Oscillograph trace of torque motor currents by increasing Signal Generator AMPLITUDE control until Oscilloscope indicates value listed in table III for each test. Maintain Signal Generator setting for approximately 10 seconds. For each test, connect PSA TPA direct probes, set Test Selector panel, and set GIMBAL SERVO TEST switch as indicated.

Table III

Test	Signal Generator Output	PSA TPA Test Points		Test Selector Panel Position	GIMBAL SERVO TEST Switch Position	Signal
		High	Low			
a	2V peak-to-peak	TB2-31	TB1-49	132	1	IG torque motor current
b	1V peak-to-peak	TB2-32	TB1-49	133	2	MG torque motor current
c	1V peak-to-peak	TB1-45	TB1-49	134	3	OG torque motor current

DATE 26 JAN 67

≠44. Stop Oscillograph. Record ΔV SCA input signal monitored on channel 6 and ΔV SCA output signal monitored on channel 8.

1X RESOLVER SIN AND COS

45. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR

67. Connect SCA trunnion CDU DAC output to DVM by setting Test Selector panel to 126 and Primary Signal Selector X BAR to 271. Record DVM indication.

68. Connect SCA shaft CDU DAC output to DVM by setting Test Selector panel to 127 and Primary Signal Selector X BAR to 271. Record DVM indication.

69. Set OPTICS MODE switch on Indicator Control panel to CMC. Wait 10 seconds, then set OPTICS MODE switch to ZERO.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

≠70. Set Test Selector panel to 129.

≠71. Connect SCA SXT Shaft tach input and output signals to Oscillograph by setting switches on Oscillograph Signal Selector panel as follows:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCA GDB stepper switch

≠72. Zero Oscillograph channel 1 and set gain at 20 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠73. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

≠74. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS MODE switch to MAN.

≠75. Hold Optics Hand Controller to left limit not longer than 20 seconds.

≠76. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT shaft tach input and output signals monitored on channels 1 and 8.

≠77. Set Test Selector panel to 148 to connect SCA SCT shaft tach output to Oscillograph.

≠78. Connect SCA SCT shaft tach input to Oscillograph by setting CHANNEL 1 switch on Oscillograph Signal Selector panel to 13.

≠79. Zero Oscillograph channel 1 and set gain at 200 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠80. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠81. Set OPTICS SPEED switch on Indicator Control panel to HI.

≠82. Hold Optics Hand Controller to right limit for approximately 20 seconds.

≠83. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT shaft tach input and output signals monitored on channels 1 and 8.

≠84. Set Test Selector panel to 130 to connect SCA SXT trunnion tach output to Oscillograph.

DATE 26 JAN 67

≠85. Connect SCA SXT trunnion tach input to Oscillograph by setting CHANNEL 2 switch on Oscillograph Signal Selector panel to 12.

≠86. Zero Oscillograph channel 2 and set gain at 20 mv/mm. Set gain of channel 8 at v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠87. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠88. Set OPTICS SPEED switch on Indicator Control panel to MED.

≠89. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

≠90. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT trunnion tach input and output signals monitored on channels 2 and 8.

≠91. Set Test Selector panel to 149 to connect SCA SCT trunnion tach output to Oscillograph.

≠92. Connect SCA SCT trunnion tach input to Oscillograph by setting CHANNEL 5 switch on Oscillograph Signal Selector panel to 11.

≠93. Insure that CH 5 AC indicator is lighted.

≠94. Zero Oscillograph channel 5 and set gain at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠95. Set CHART DRIVE switch on Oscillograph Control to MM/SEC.

≠96. Set OPTICS SPEED switch on Indicator Control panel to HI.

≠97. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

≠98. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT trunnion tach input and output signals monitored on channels 5 and 8.

≠102. Connect jumper between PROBES OUTPUT DIRECT jacks and PAVM IN jacks on Auxiliary Input Panel. Set PAVM select switch to Aux position on Primary Signal Select panel.

≠103. Connect SCA input to PAVM and SCA output to DVM by connecting PSA TPA direct probes to test points listed in table V and setting Test Selector panel to positions indicated. Record SCA input on PAVM and SCA output on DVM (X BAR 271) for each test.

104. Perform JDC 12204 to turn off G & N system.

105. Perform calculations on data sheets.

Table V

Test	PSA TPA Test Points		Test Selector Panel Position	Signal
	High	Low		
a	TB4-43	TB4-47	116	Roll attitude error
b	TB4-44	TB4-48	114	Yaw attitude error
c	TB4-45	TB4-49	115	Pitch attitude error

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV. D PAGE 1 OF 10
INITIAL TDRR 32758 D.S. PGS. 7

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY.

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Assembly. Functional operation is evaluated by checking Signal Conditioner Assembly input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G & N test configuration for maximum checkout capability.

JDC 12204

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: The items marked (≠) are applicable only for SCA P/N 2007235 and are to be omitted for SCA P/N 2007234.

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

2. Position SCA in cutout above DSKY on right side of cradle front panel assembly with SCA connectors facing bracket assembly, P/N 2900919, and attach with six captive screws. Torque screws finger tight.

3. Position SCA Deutsch connectors J1, J2, and J3 in bracket assembly 2900919 (observe placarding on bracket assembly for connector locations) and attach with hex nuts supplied with each connector. Torque hex nuts finger tight.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

3. Connect GNF harness connectors P7, P8, and P9 to SCA connectors J2, J1, and J3 respectively.

4. Perform JDC 12204 to advance G & N system to STANDBY mode.

5. Connect jumper between PROBES OUTPUT DIRECT jacks and DVM IN jacks on Auxiliary Input Panel.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 26 JAN 67

---

6. Connect PSA Test Point Adapter (TPA-2) direct probes to TB5 jack 26 (high) and TB5 jack 30 (low).

7. Set the Primary Signal Selector VOLTMETER INPUT DVM switch to AUX position.

8. Adjust G & N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28 (±0.25) vdc.

NOTE: The 28 vdc bus will cycle with the Heater Cycle.

9. Press to light OPTICS POWER ON pushbutton on Test Control panel.

10. Perform the following switch settings on the applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set
   - (1) OPTICS ZERO to OFF then to ZERO
   - (2) OPTICS TEL TRUN to SLAVE TO SXT
   - (3) OPTICS COUPLING to DIRECT
   - (4) OPTICS MODE to MAN
   - (5) OPTICS SPEED to LO

b. On all Indicator Control Panels except 2021290 set
   - (1) OPTICS MODE to MAN then to ZERO
   - (2) OPTICS CONTROLLER SPEED to LO
   - (3) OPTICS CONTROLLER COUPLING to DIRECT
   - (4) OPTICS TRACKER to OFF
   - (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCA GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL switches on Primary Signal Selector panel to 271.

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit on Test Selector Panel Position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last two digits.

2. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
101	28 vdc CGC operate
102	28 vdc IMU standby
203	28 vdc optics operate

CMC WARNING

3. Set Test Selector panel to 204.

4. Perform CMC warning lamp test by entering VERB 35 into DSKY and pressing ENTR pushbutton.

5. Record that the CMC lamp on the Indicator Control panel lights and then extinguishes. Record the DVM reading after the CMC lamp has extinguished.

PIPA G/S OUTPUT

6. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA G/S output
CHANNEL 5 to 1	Y PIPA G/S output
CHANNEL 6 to 1	X PIPA G/S output
CHANNEL 8 to 4	SCA GDB stepper switch

7. Insure that CH AC indicators are lighted for channels 4, 5, and 6.

8. Zero Oscillograph channels 4, 5, and 6 and set gains at 500 mv/mm. Set gain of channel 8 at 2 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input by offsetting zero line 12 1/2 mm to right of chart centerline.

9. Insure that PROCEED indicator of PROCEED/ISS OPERATE pushbutton on Test Control panel is lighted.

10. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

11. Obtain Oscillograph record of PIPA loop closure data by performing following steps successively for each position of Test Selector panel listed in table I by performing step 9 through 14.

12. Press PROCEED/ISS OPERATE pushbutton on Test Control panel.

NOTE: Do not wait 90 sec. Immediately go to next step.

13. Press IMU CAGE/COMMAND pushbutton.

14. Wait at least 10 seconds for PIPA loop closure, then press PROCEED/ISS STANDBY pushbutton.

Table I

Test Selector Panel Position	Signal
117	Z PIPA G/S in-phase output
118	Y PIPA G/S in-phase output
119	X PIPA G/S in-phase output

15. Stop Oscillograph. Turn Sensitivity to OFF. Check Oscillograph record for 3 indications of PIPA loop closure on channel 8 correlating to the loop closure indications on channels 4, 5, and 6. Record that traces have centered after loop closure.

POWER SUPPLY AND TEMPERATURE

16. Press PROCEED/ISS OPERATE pushbutton on Test Control panel and wait 90 seconds, for wheel run-up completed, then repeat step A.8.

17. Measure and record the following voltages on the DVM. Measure all the X BAR voltages, then place the Primary Signal Selector to position 271 to measure the corresponding Test Selector panel positions:

Item	Voltage	X Bar	Test Selector Position
a.	120 vdc PIPA supply level	259	103
b.	2.5 vdc TM bias	N/A	104
c.	3200 cps 28V	123	106
d.	800 cps 28V 1% IMU	121	113

Item	Voltage	X Bar	Test Selector Position
≠e.	800 cps 28V 1% Optics	101	128
f.	PIPA temp	255	201
≠g.	IRIG temp	156	202

≠18. Connect TPA-2 direct probes to TB4-21 hi abd TB5-22 lo. Measure and record X BAR 299 voltage on the DVM.

≠19. Set the Test Selector to position 150 and X BAR to 271. Measure and record the DVM indication.

≠20. Connect TPA-2 direct probes to TB4-20 hi and TB5-33 lo. Measure and record X BAR 299 voltage on DVM.

≠21. Set the Test Selector to position 151 and X BAR to 271. Measure and record the DVM indication.

NOTE: In steps 20 and 21, an indication may or may not be present depending upon blower cycling.

IG, MG, AND OG SERVO ERRORS

22. Perform following DSKY operations:

a.	VERB 57		ENTR
b.	Observe		
	VERB 21	NOUN 01	Flashing
c.	00015		ENTR
d.	VERB 41	NOUN 20	ENTR
e.	Observe		
	VERB 21	NOUN 22	Flashing
f.	+00000		ENTR
g.	Observe		
	VERB 22	NOUN 22	Flashing
h.	+00000		ENTR
i.	Observe		
	VERB 23	NOUN 22	Flashing
j.	+00000		ENTR

23. Deleted.

24. Connect following signals to Oscillograph by setting following switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 1 to 2	IG servo error
CHANNEL 2 to 2	MG servo error
CHANNEL 3 to 2	OG servo error
CHANNEL 8 to 4	SCA GDB stepper switch

25. Insure that CH 3 AC indicator is lighted.

26. Zero Oscillograph channels 1, 2, and 3 and set gains at 50 mv/mm. Set gain of channel 8 at 2 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input by offsetting zero line 12 1/2 mm to right of chart centerline.

27. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel.

28. Set switches on Signal Generator as follows:

FUNCTION to SINE
RANGE to X 0.1
FREQUENCY meter to 2

29. Set the Oscillograph Signal Selector Channel 5 to 1 DC. Use the DC BALANCE CONTROL on the Signal Generator to center the trace about zero reference on the Oscillograph.

30. Perform following DSKY operations:

a. VERB 42 ENTR

b. VERB 33 ENTR

31. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

32. Set the GIMBAL SERVO TEST switch on the Test Selector panel to the appropriate position.

33. Press TEST START pushbutton on Test Selector panel.

34. Obtain an Oscillograph trace of stabilization loop servo error data by increasing the Signal Generator AMPLITUDE control to three-fourths of maximum for approximately 10 seconds for each test listed in table II.

Table II

Test	GIMBAL SERVO TEST Switch Position	Test Selector Panel Position	Signal
a	1	137	IG servo error
b	2	138	MG servo error
c	3	139	OG servo error

35. Stop Oscillograph. Turn SENS to OFF. Record ΔV SCA input signals monitored on channels 1, 2, and 3, and ΔV SCA output signals monitored on channel 8.

IG, MG, AND OG TORQUE MOTOR CURRENTS

#36. Insure that AMPLITUDE control on Signal Generator is set to 0.

#37. Connect jumper between PROBES OUTPUT DIRECT jacks and CH 6 DC IN jacks on Auxiliary Input Panel.

#38. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to AUX.

#39. Zero Oscillograph channel 6 and set gain at 0.1 v/cm. Set gain of channel 8 at 1 v/cm and position channel 8 trace as near center as possible with a 2.5 dc bias input.

#40. Set FREQUENCY meter on Signal Generator to 1 and RANGE switch to X1.

#41. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

#42. To monitor Signal Generator output on Oscillograph set the Oscillograph Signal Selector to channel 5-1 DC.

#43. Obtain Oscillograph trace of torque motor currents by increasing Signal Generator AMPLITUDE control until Oscilloscope indicates value listed in table III for each test. Maintain Signal Generator setting for approximately 10 seconds. For each test, connect PSA TPA direct probes, set Test Selector panel, and set GIMBAL SERVO TEST switch as indicated.

#44. Stop Oscillograph. Record ΔV SCA input signal monitored on channel 6 and ΔV SCA output signal monitored on channel 8.

1X RESOLVER SIN AND COS

45. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR

b. Observe

VERB 21 NOUN 22 Flashing

c. +04500 ENTR

d. Observe

VERB 22 NOUN 22 Flashing

f. Observe

VERB 23 NOUN 22 Flashing

g. +04500 ENTR

46. Wait 20 seconds after performing step 45, then perform following DSKY operations:

a. VERB 42 ENTR

b. VERB 33 ENTR

NOTE: Due to IMU drift steps 47.b and 47.c must be performed as rapidly as possible for each test listed in table IV.

47. Connect SCA output and SCA input to DVM for each test listed in table IV. For each test, perform following operations:

a. Set CROSSBAR CONTROL switch to 271.

b. Set Test Selector panel to position listed and record DVM indication.

c. Immediately set CROSSBAR CONTROL switch on Primary Signal Selector panel to position listed and record DVM indication.

48. Perform following DSKY operations:

SHAFT AND TRUNNION CDU FINE ERROR

49. Deleted.

#50. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

#51. Connect SCA shaft CDU fine error output to DVM by setting Test Selector panel to 146. Set Primary Signal Selector to X BAR 271.

#52. Connect jumper between PROBES OUTPUT BUFFERED jacks and PAVM IN jacks on Auxiliary Input Panel.

#53. Connect SCA shaft CDU fine error input to PAVM by connecting PSA TPA-2 buffered probes to TB3 jack 23 (high) and TB3 jack 34 (low). On Aux Input panel run jumper from Probes output direct to PAVM input, and select PAVM Aux position on Primary Signal Select panel.

#54. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

#54. Set OPTICS MODE switch on Indicator Control Panel to MAN.

#55. Perform following DSKY operations.

a. VERB 21 NOUN 10 ENTR

b. 00012 ENTR

c. 00011 ENTR

#56. Position Optics Hand Controller on Indicator Control panel to the left until the PAVM indicates 1.0 VAC in phase. Record SCA output indicated on DVM 271.

#57. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

#58. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

#59. Connect SCA trunnion CDU fine error output to DVM by setting Test Selector panel to 147. Set Primary Signal Selector to X BAR 271.

#60. Connect SCA trunnion CDU fine error input to PAVM by connecting PSA TPA buffered probes to TB3 jack 22 (high) and TB3 jack 34 (low).

#61. Repeat steps 54 and 55.

#62. Position Optics Hand Controller on Indicator Control panel to a down position until PAVM indicates 0.64 VAC in phase. Record SCA output on DVM at CROSSBAR CONTROL position 271.

#63. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

#64. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

#65. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

#66. Perform following DSKY operations:

VERB 21 NOUN 10 ENTR
00012 ENTR
00010 ENTR
VERB 21 NOUN 10 ENTR
00012 ENTR

67. Connect SCA trunnion CDU DAC output to DVM by setting Test Selector panel to 126 and Primary Signal Selector X BAR to 271. Record DVM indication.

68. Connect SCA shaft CDU DAC output to DVM by setting Test Selector panel to 127 and Primary Signal Selector X BAR to 271. Record DVM indication.

69. Set OPTICS MODE switch on Indicator Control panel to CMC. After approximately ten seconds, set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO and on all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

#70. Set Test Selector panel to 129.

#71. Connect SCA SXT Shaft tach input and output signals to Oscillograph by setting switches on Oscillograph Signal Selector panel as follows:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCA GDB stepper switch

#72. Zero Oscillograph channel 1 and set gain at 20 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

#73. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

#74. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS ZERO switch (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

#75. Hold Optics Hand Controller to left limit not longer than 20 seconds.

#76. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT shaft tach input and output signals monitored on channels 1 and 8.

#77. Set Test Selector panel to 148 to connect SCA SCT shaft tach output to Oscillograph.

#78. Connect SCA SCT shaft tach input to Oscillograph by setting CHANNEL 1 switch on Oscillograph Signal Selector panel to 13.

#79. Zero Oscillograph channel 1 and set gain at 200 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

#80. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

#81. Set OPTICS SPEED switch on Indicator Control panel to HI.

#82. Hold Optics Hand Controller to right limit for approximately 20 seconds.

#83. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA

BLOCK II SIGNAL CONDITIONER
JOB FUNCTIONAL CHECKOUT | JDC 12224 REV D PAGE 9 OF 10

SUBSYSTEM BLOCK II G & N SYSTEM | ASSY

SCT shaft tach input and output signals monitored on channels 1 and 8.

✓84. Set Test Selector panel to 130 to connect SCA SXT trunnion tach output to Oscillograph.

✓85. Connect SCA SXT trunnion tach input to Oscillograph by setting CHANNEL 2 switch on Oscillograph Signal Selector panel to 12.

✓86. Zero Oscillograph channel 2 and set gain at 20 mv/mm. Set gain of channel 8 at v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

✓87. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

✓88. Set OPTICS SPEED switch on Indicator Control panel to MED.

✓89. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

✓90. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT trunnion tach input and output signals monitored on channels 2 and 8.

✓91. Set Test Selector panel to 149 to connect SCA SCT trunnion tach output to Oscillograph.

✓92. Connect SCA SCT trunnion tach input to Oscillograph by setting CHANNEL 5 switch on Oscillograph Signal Selector panel to 11.

✓93. Insure that CH 5 AC indicator is lighted.

✓94. Zero Oscillograph channel 5 and set gain at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

✓95. Set CHART DRIVE switch on Oscillograph Control to MM/SEC.

✓96. Set OPTICS SPEED switch on Indicator Control panel to HI.

✓97. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

✓98. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT trunnion tach input and output signals monitored on channels 5 and 8.

YAW, PITCH, AND ROLL ATTITUDE ERRORS

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV. E PAGE 1 OF 10

INITIAL TDRR 32758 D.S. PGS 7

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY.

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Assembly. Functional operation is evaluated by checking Signal Conditioner Assembly input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G & N test configuration for maximum checkout capability.

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: The items marked (≠) are applicable only for SCA P/N 2007235 and are to be omitted for SCA P/N 2007234.

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

2. Position SCA in cutout above DSKY on right side of cradle front panel assembly with SCA connectors facing bracket assembly, P/N 2900919, and attach with six captive screws. Torque screws finger tight.

3. Position SCA Deutsch connectors J1, J2, and J3 in bracket assembly 2900919 (observe placarding on bracket assembly for connector locations) and attach with hex nuts supplied with each connector. Torque hex nuts finger tight.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

3. Connect GNF harness connectors P7, P8, and P9 to SCA connectors J2, J1, and J3 respectively.

4. Perform JDC 12204 to advance system to ISS Operate mode.

5. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 26 JAN 67

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV E PAGE 2 OF 10

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY

6. Adjust G & N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28.8 (±0.25) vdc.

7. Press to light OPTICS POWER ON pushbutton on Test Control panel.

8. Perform the following switch settings on the applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set
   - (1) OPTICS ZERO to OFF then to ZERO
   - (2) OPTICS TEL TRUN to SLAVE TO SXT
   - (3) OPTICS COUPLING to DIRECT
   - (4) OPTICS MODE to MAN
   - (5) OPTICS SPEED to LO

b. On all Indicator Control panels except 2021290 set
   - (1) OPTICS MODE to MAN then to ZERO
   - (2) OPTICS CONTROLLER SPEED to LO
   - (3) OPTICS CONTROLLER COUPLING to DIRECT
   - (4) OPTICS TRACKER to OFF
   - (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCA GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL switches on Primary Signal Selector panel to 271.

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit on Test Selector Panel Position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last two digits.

2. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
101	28 vdc CGC operate
102	28 vdc IMU standby
203	28 vdc optics operate

CMC WARNING

3. Set Test Selector panel to 204.

4. Perform CMC warning lamp test by entering VERB 35 into DSKY and pressing ENTR pushbutton.

5. Record that the CMC lamp on the Indicator Control panel lights and then extinguishes. Record the DVM reading after the CMC lamp has extinguished.

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV E PAGE 3 OF 10

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY

PIPA G/S OUTPUT

6. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA G/S output
CHANNEL 5 to 1	Y PIPA G/S output
CHANNEL 6 to 1	X PIPA G/S output
CHANNEL 8 to 4	SCA GDB stepper switch

7. Insure that CH AC indicators are lighted for channels 4, 5, and 6.

8. Set sensitivities on Oscillograph Amplifiers for channels 4, 5, and 6 to 500 mv/mm and set sensitivity of channel 8 to 5 v/cm. Use ZERO ADJ control to center all traces.

9. Perform the following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 41	NOUN 20	ENTR
c.	+00000		ENTR
d.	-04500		ENTR
e.	+03500		ENTR

10. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel.

NOTE: Perform steps 11 through 14 successively for each Test Selector panel position listed in Table I.

11. Set Test Selector panel to position listed in Table I.

12. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Ignore all light indications in step 13.

13. Perform the following DSKY operation:

VERB 35 ENTR

Table I

Test Selector Panel Position	Signal
117	Z PIPA G/S in-phase output
118	Y PIPA G/S in-phase output
119	X PIPA G/S in-phase output

14. Observe channel 8 for indication of PIPA loop opening for approximately 30 seconds then closing. Stop oscillograph. Record PIPA loop closure test results as satisfactory if loop closure indication on channel 8 corresponds to loop closure indication on channel 4, 5, or 6.

15. Perform the following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	+00000		ENTR
c.	-22500		ENTR
d.	-03500		ENTR

16. Repeat steps 11 through 14 then set all Oscillograph Amplifier sensitivities to OFF.

POWER SUPPLY AND TEMPERATURE

17. Measure and record the following voltages by setting CROSSBAR CONTROL on Primary Signal Selector panel to the position indicated and recording the DVM indication and then setting the CROSSBAR CONTROL to 271 to measure the corresponding Test Selector panel positions:

Item	Voltage	CROSSBAR CONTROL	Test Selector
a.	120 vdc PIPA supply level	259	103
b.	2.5 vdc TM bias	N/A	104
c.	3200 cps 28V	123	106
d.	800 cps 28V 1% IMU	121	113

h.	+00000		ENTR
i.	Observe		
	VERB 23	NOUN 22	Flashing
j.	+00000		ENTR

23. Deleted.

24. Connect following signals to Oscillograph by setting following switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 1 to 2	IG servo error
CHANNEL 2 to 2	MG servo error
CHANNEL 3 to 2	OG servo error
CHANNEL 8 to 4	SCA GDB stepper switch

25. Insure that CH 3 AC indicator is lighted.

26. Zero Oscillograph channels 1, 2, and 3 and set gains at 50 mv/mm. Set gain of channel 8 at 2 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input by offsetting zero line 12 1/2 mm to right of chart centerline.

27. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel.

28. Set switches on Signal Generator as follows:
   - RANGE to X 0.1
   - FREQUENCY meter to 2
   - FUNCTION to SINE
   - AMPLITUDE to zero

29. Set the Oscillograph Signal Selector Channel 5 to 1 DC. Set sensitivity on Oscillograph Amplifier for channel 5 to 20 v/cm. Use the DC BALANCE CONTROL on the Signal Generator to center the trace about zero reference on the Oscillograph.

DATE 26 JAN 67

30. Perform following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

31. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Perform steps 32 through 34 for each test listed in table II.

32. Set GIMBAL SERVO TEST switch on Test Selector panel to position listed in table II.

33. Press TEST START pushbutton on Test Selector panel.

34. Obtain an Oscillograph trace of stabilization loop servo error data by increasing the Signal Generator AMPLITUDE control to three-fourths of maximum for approximately 10 seconds.

Table II

Test	GIMBAL SERVO TEST Switch Position	Test Selector Panel Position	Signal
a	1	137	IG servo error
b	2	138	MG servo error
c	3	139	OG servo error

35. Set GIMBAL SERVO TEST switch on Test Selector panel to OFF. Stop Oscillograph and set sensitivities on Oscillograph Amplifiers to OFF. Record ΔV SCA input signal monitored on channels 1, 2, and 3, and ΔV SCA output signals monitored on channel 8.

IG, MG, AND OG TORQUE MOTOR CURRENTS

≠36. Insure that AMPLITUDE control on Signal Generator is set to 0.

≠37. Connect jumper between PROBES OUTPUT DIRECT jacks and CH 6 DC IN jacks on Auxiliary Input Panel.

≠38. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to AUX.

≠39. Zero Oscillograph channel 6 and set gain at 0.1 v/cm. Set gain of channel 8 at 1 v/cm and position channel 8 trace as near center as possible with a 2.5 dc bias input.

≠40. Set FREQUENCY meter on Signal Generator to 1 and RANGE switch to X1.

≠41. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠42. To monitor Signal Generator output on Oscillograph set the Oscillograph Signal Selector to channel 5-1 DC.

≠43. Obtain Oscillograph trace of torque motor currents by increasing Signal Generator AMPLITUDE control until Oscilloscope indicates value listed in table III for each test. Maintain Signal Generator setting for approximately 10 seconds. For each test, connect PSA TPA direct probes, set Test Selector panel, and set GIMBAL SERVO TEST switch as indicated.

≠44. Set GIMBAL SERVO TEST switch on Test Selector panel to OFF. Stop Oscillograph and set sensitivities on Oscillograph Amplifiers to OFF. Record ΔVSCA input signal monitored on channel 6 and ΔVSCA output signal monitored on channel 8.

1X RESOLVER SIN AND COS

45. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe
VERB 21 NOUN 22 Flashing
c. +04500 ENTR
d. Observe
VERB 22 NOUN 22 Flashing
e. +04500 ENTR

Table III

Test	Signal Generator Output	PSA TPA Test Points		Test Selector Panel Position	GIMBAL SERVO TEST Switch Position	Signal
		High	Low			
a	2V peak-to-peak	TB2-31	TB1-49	132	1	IG torque motor current
b	1V peak-to-peak	TB2-32	TB1-49	133	2	MG torque motor current
c	1V peak-to-peak	TB1-45	TB1-49	134	3	OG torque motor current

f. Observe
VERB 23 NOUN 22 Flashing
g. +04500 ENTR

46. Deleted

47. Connect SCA output and SCA input to DVM for each test listed in table IV. For each test, perform following operations:

a. Set CROSSBAR CONTROL switch to 271.
b. Set Test Selector panel to position listed and record DVM indication.
c. Immediately set CROSSBAR CONTROL switch on Primary Signal Selector panel to position listed and record DVM indication.

48. Perform following DSKY operations:

a. Verb 41 NOUN 20 ENTR
b. Observe
VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe
VERB 22 NOUN 22 Flashing
e. +00000 ENTR

a	120	243	IG 1X resolver cos
b	121	242	MG 1X resolver cos
c	122	241	OG 1X resolver cos
d	123	144	IG 1X resolver sin
e	124	143	MG 1X resolver sin
f	125	142	OG 1X resolver sin

SHAFT AND TRUNNION CDU FINE ERROR

49. Deleted.

≠50. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠51. Connect SCA shaft CDU fine error output to DVM by setting Test Selector panel to 146. Set Primary Signal Selector to X BAR 271.

≠52. Connect jumper between PROBES OUTPUT BUFFERED jacks and PAVM IN jacks on Auxiliary Input Panel.

≠53. Connect SCA shaft CDU fine error input to PAVM by connecting PSA TPA-2 buffered probes to TB3 jack 23 (high) and TB3 jack 34 (low). On Aux Input panel run jumper from Probes output direct to PAVM input, and select PAVM Aux position on Primary Signal Select panel.

≠54. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

≠54. Set OPTICS MODE switch on Indicator Control Panel to MAN.

≠55. Perform following DSKY operations.

a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00011 ENTR

≠56. Position Optics Hand Controller on Indicator Control panel to the left until the PAVM indicates 1.0 VAC in phase. Record SCA output indicated on DVM 271.

≠57. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

≠58. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠59. Connect SCA trunnion CDU fine error output to DVM by setting Test Selector panel to 147. Set Primary Signal Selector to X BAR 271.

≠60. Connect SCA trunnion CDU fine error input to PAVM by connecting PSA TPA buffered probes to TB3 jack 22 (high) and TB3 jack 34 (low).

≠61. Repeat steps 54 and 55.

≠62. Position Optics Hand Controller on Indicator Control panel to a down position until PAVM indicates 0.64 VAC in phase. Record SCA output on DVM at CROSSBAR CONTROL position 271.

≠63. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF and set OPTICS MODE switch to CMC. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO for 20 seconds then set to CMC.

≠64. Perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +04500 ENTR
c. +75000 ENTR

≠65. Measure and record SCA Trunnion CDU DAC output on DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 271 and setting Test Selector panel to 126.

≠66. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to HI.

---

67. Position the Optics Hand Controller to the left to drive shaft in a negative direction until the shaft TPAC indicates 120° ±10°.

68. Set OPTICS MODE switch on Indicator Control panel to CMC. Measure and record SCA Shaft CDU DAC output on DVM by setting CROSSBAR CONTROL on Primary Signal Selector to 271 and setting Test Selector panel to 127.

69. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

≠70. Set Test Selector panel to 129.

≠71. Connect SCA SXT Shaft tach input and output signals to Oscillograph by setting switches on Oscillograph Signal Selector panel as follows:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCA GDB stepper switch

≠72. Zero Oscillograph channel 1 and set gain at 20 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠73. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

≠74. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS ZERO switch (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

≠75. Hold Optics Hand Controller to left limit not longer than 20 seconds.

≠76. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT shaft tach input and output signals monitored on channels 1 and 8.

≠77. Set Test Selector panel to 148 to connect SCA SCT shaft tach output to Oscillograph.

≠78. Connect SCA SCT shaft tach input to Oscillograph by setting CHANNEL 1 switch on Oscillograph Signal Selector panel to 13.

≠79. Zero Oscillograph channel 1 and set gain at 200 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠80. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠81. Set OPTICS SPEED switch on Indicator Control panel to HI.

≠82. Hold Optics Hand Controller to right limit for approximately 20 seconds.

≠83. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT shaft tach input and output signals monitored on channels 1 and 8.

#85. Connect SCA SXT trunnion tach input to Oscillograph by setting CHANNEL 2 switch on Oscillograph Signal Selector panel to 12.

#86. Zero Oscillograph channel 2 and set gain at 20 mv/mm. Set gain of channel 8 at v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

#87. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

#88. Set OPTICS SPEED switch on Indicator Control panel to MED.

#89. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

#90. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT trunnion tach input and output signals monitored on channels 2 and 8.

#91. Set Test Selector panel to 149 to connect SCA SCT trunnion tach output to Oscillograph.

#92. Connect SCA SCT trunnion tach input to Oscillograph by setting CHANNEL 5 switch on Oscillograph Signal Selector panel to 11.

#93. Insure that CH 5 AC indicator is lighted.

#94. Zero Oscillograph channel 5 and set gain at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

#95. Set CHART DRIVE switch on Oscillograph Control to MM/SEC.

#96. Set OPTICS SPEED switch on Indicator Control panel to HI.

#97. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

#98. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set sensitivities on Oscillograph Amplifiers to OFF. Record SCA SCT trunnion tach input and output signals monitored on channels 5 and 8.

YAW, PITCH, AND ROLL ATTITUDE ERRORS

#99. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe

INITIAL TDRR 32758 **D.S. PGS.** 7

SUBSYSTEM BLOCK II G & N SYSTEM | **ASSY.**

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Assembly. Functional operation is evaluated by checking Signal Conditioner Assembly input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G & N test configuration for maximum checkout capability.

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops

INTERVAL

TOOLS AND MATERIAL

NOTE: The items marked (≠) are applicable only for SCA P/N 2007235 and are to be omitted for SCA P/N 2007234.

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

2. Position SCA in cutout above DSKY on right side of cradle front panel assembly with SCA connectors facing bracket assembly, P/N 2900919, and attach with six captive screws. Torque screws finger tight.

3. Position SCA Deutsch connectors J1, J2, and J3 in bracket assembly 2900919 (observe placarding on bracket assembly for connector locations) and attach with hex nuts supplied with each connector. Torque hex nuts finger tight.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

3. Connect GNF harness connectors P7 P8, and P9 to SCA connectors J2, J1, and J3 respectively.

4. Perform JDC 12204 to advance system to ISS Operate mode.

5. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 26 JAN 67

---

6. Adjust G & N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28.8 (±0.25) vdc.

7. Press to light OPTICS POWER ON pushbutton on Test Control panel.

8. Perform the following switch settings on the applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set
   - (1) OPTICS ZERO to OFF then to ZERO
   - (2) OPTICS TEL TRUN to SLAVE TO SXT
   - (3) OPTICS COUPLING to DIRECT
   - (4) OPTICS MODE to MAN
   - (5) OPTICS SPEED to LO

b. On all Indicator Control panels except 2021290 set
   - (1) OPTICS MODE to MAN then to ZERO
   - (2) OPTICS CONTROLLER SPEED to LO
   - (3) OPTICS CONTROLLER COUPLING to DIRECT
   - (4) OPTICS TRACKER to OFF
   - (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCA GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL switches on Primary Signal Selector panel to 271.

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit on Test Selector Panel Position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last two digits.

2. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
101	28 vdc CGC operate
102	28 vdc IMU standby
203	28 vdc optics operate

CMC WARNING

3. Set Test Selector panel to 204.

4. Perform CMC warning lamp test by entering VERB 35 into DSKY and pressing ENTR pushbutton.

5. Record that the CMC lamp on the Indicator Control panel lights and then extinguishes. Record the DVM reading after the CMC lamp has extinguished.

DATE 26 JAN 67

PIPA G/S OUTPUT

6. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA G/S output
CHANNEL 5 to 1	Y PIPA G/S output
CHANNEL 6 to 1	X PIPA G/S output
CHANNEL 8 to 4	SCA GDB stepper switch

7. Insure that CH AC indicators are lighted for channels 4, 5, and 6.

8. Set sensitivities on Oscillograph Amplifiers for channels 4, 5, and 6 to 500 mv/mm and set sensitivity of channel 8 to 5 v/cm. Use ZERO ADJ control to center all traces.

9. Perform the following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 41	NOUN 20	ENTR
c.	+00000		ENTR
d.	-04500		ENTR
e.	+03500		ENTR

10. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel.

NOTE: Perform steps 11 through 14 successively for each Test Selector panel position listed in Table I.

11. Set Test Selector panel to position listed in Table I.

12. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Ignore all light indications in step 13.

13. Perform the following DSKY operation:
VERB 35 ENTR

Table I

Test Selector Panel Position	Signal
117	Z PIPA G/S in-phase output
118	Y PIPA G/S in-phase output
119	X PIPA G/S in-phase output

14. Observe channel 8 for indication of PIPA loop opening for approximately 30 seconds then closing. Stop oscillograph. Record PIPA loop closure test results as satisfactory if loop closure indication on channel 8 corresponds to loop closure indication on channel 4, 5, or 6.

15. Perform the following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	+00000		ENTR
c.	-22500		ENTR
d.	-03500		ENTR

16. Repeat steps 11 through 14 then set all Oscillograph Amplifier sensitivities to OFF.

POWER SUPPLY AND TEMPERATURE

17. Measure and record the following voltages by setting CROSSBAR CONTROL on Primary Signal Selector panel to the position indicated and recording the DVM indication and then setting the CROSSBAR CONTROL to 271 to measure the corresponding Test Selector panel positions:

Item	Voltage	CROSSBAR CONTROL	Test Selector
a.	120 vdc PIPA supply level	259	103
b.	2.5 vdc TM bias	N/A	104
c.	3200 cps 28V	123	106
d.	800 cps 28V 1% IMU	121	113

DATE 26 JAN 67

≠e.	800 cps 28V 1% Optics	101	128
f.	PIPA temp	255	201
≠g.	IRIG temp	156	202

≠18. Connect TPA-2 direct probes to TB4-21 hi and TB5-22 lo. Measure and record X BAR 299 voltage on the DVM.

≠19. Set the Test Selector to position 150 and X BAR to 271. Measure and record the DVM indication.

≠20. Connect TPA-2 direct probes to TB4-20 hi and TB5-33 lo. Measure and record X BAR 299 voltage on DVM.

≠21. Set the Test Selector to position 151 and X BAR to 271. Measure and record the DVM indication.

NOTE: In steps 20 and 21, an indication may or may not be present depending upon blower cycling.

IG, MG, AND OG SERVO ERRORS

22. Perform following DSKY operations:

a.	VERB 57		ENTR
b.	Observe		
	VERB 21	NOUN 01	Flashing
c.	00015		ENTR
d.	VERB 41	NOUN 20	ENTR
e.	Observe		
	VERB 21	NOUN 22	Flashing
f.	+00000		ENTR
g.	Observe		
	VERB 22	NOUN 22	Flashing
h.	+00000		ENTR
i.	Observe		
	VERB 23	NOUN 22	Flashing
j.	+00000		ENTR

23. Deleted.

24. Connect following signals to Oscillograph by setting following switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 1 to 2	IG servo error
CHANNEL 2 to 2	MG servo error
CHANNEL 3 to 2	OG servo error
CHANNEL 8 to 4	SCA GDB stepper switch

25. Insure that CH 3 AC indicator is lighted.

26. Zero Oscillograph channels 1, 2, and 3 and set gains at 50 mv/mm. Set gain of channel 8 at 2 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input by offsetting zero line 12 1/2 mm to right of chart centerline.

27. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel.

28. Set switches on Signal Generator as follows:
RANGE to X 0.1
FREQUENCY meter to 2
FUNCTION to SINE
AMPLITUDE to zero

29. Set the Oscillograph Signal Selector Channel 5 to 1 DC. Set sensitivity on Oscillograph Amplifier for channel 5 to 20 v/cm. Use the DC BALANCE CONTROL on the Signal Generator to center the trace about zero reference on the Oscillograph.

DATE 26 JAN 67

30. Perform following DSKY operations:

a. VERB 42 ENTR

b. VERB 33 ENTR

31. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Perform steps 32 through 34 for each test listed in table II.

32. Set GIMBAL SERVO TEST switch on Test Selector panel to position listed in table II.

33. Press TEST START pushbutton on Test Selector panel.

34. Obtain an Oscillograph trace of stabilization loop servo error data by increasing the Signal Generator AMPLITUDE control to three-fourths of maximum for approximately 10 seconds.

Table II

Test	GIMBAL SERVO TEST Switch Position	Test Selector Panel Position	Signal
a	1	137	IG servo error
b	2	138	MG servo error
c	3	139	OG servo error

35. Set GIMBAL SERVO TEST switch on Test Selector panel to OFF. Stop Oscillograph and set sensitivities on Oscillograph Amplifiers to OFF. Record ΔV SCA input signal monitored on channels 1, 2, and 3, and ΔV SCA output signals monitored on channel 8.

IG, MG, AND OG TORQUE MOTOR CURRENTS

≠36. Insure that AMPLITUDE control on Signal Generator is set to 0.

≠37. Connect jumper between PROBES OUTPUT DIRECT jacks and CH 6 DC IN jacks on Auxiliary Input Panel.

≠38. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to AUX.

≠39. Zero Oscillograph channel 6 and set gain at 0.1 v/cm. Set gain of channel 8 at 1 v/cm and position channel 8 trace as near center as possible with a 2.5 dc bias input.

≠40. Set FREQUENCY meter on Signal Generator to 1 and RANGE switch to X1.

≠41. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠42. To monitor Signal Generator output on Oscillograph set the Oscillograph Signal Selector to channel 5-1 DC.

≠43. Obtain Oscillograph trace of torque motor currents by increasing Signal Generator AMPLITUDE control until Oscilloscope indicates value listed in table III for each test. Maintain Signal Generator setting for approximately 10 seconds. For each test, connect PSA TPA direct probes, set Test Selector panel, and set GIMBAL SERVO TEST switch as indicated.

≠44. Set GIMBAL SERVO TEST switch on Test Selector panel to OFF. Stop Oscillograph and set sensitivities on Oscillograph Amplifiers to OFF. Record ΔV SCA input signal monitored on channel 6 and ΔV SCA output signal monitored on channel 8.

1X RESOLVER SIN AND COS

45. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR

b. Observe
VERB 21 NOUN 22 Flashing

c. +04500 ENTR

d. Observe
VERB 22 NOUN 22 Flashing

f	125	142	OG 1X resolver sin

SHAFT AND TRUNNION CDU FINE ERROR

49. Deleted.

≠50. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠51. Connect SCA shaft CDU fine error output to DVM by setting Test Selector panel to 146. Set Primary Signal Selector to X BAR 271.

≠52. Connect jumper between PROBES OUTPUT BUFFERED jacks and PAVM IN jacks on Auxiliary Input Panel.

≠53. Connect SCA shaft CDU fine error input to PAVM by connecting PSA TPA-2 buffered probes to TB3 jack 23 (high) and TB3 jack 34 (low). On Aux Input panel run jumper from Probes output direct to PAVM input, and select PAVM Aux position on Primary Signal Select panel.

≠54. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and SET OPTICS MODE switch to MAN.

≠55. Perform following DSKY operations.

a. VERB 21 NOUN 10 ENTR

b. 00012 ENTR

c. 00011 ENTR

≠56. Position Optics Hand Controller on Indicator Control panel to the left until the PAVM indicates 1.0 VAC in phase. Record SCA output indicated on DVM 271.

≠57. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

≠58. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠59. Connect SCA trunnion CDU fine error output to DVM by setting Test Selector panel to 147. Set Primary Signal Selector to X BAR 271.

≠60. Connect SCA trunnion CDU fine error input to PAVM by connecting PSA TPA buffered probes to TB3 jack 22 (high) and TB3 jack 34 (low).

≠61. Repeat steps 54 and 55.

≠62. Position Optics Hand Controller on Indicator Control panel to a down position until PAVM indicates 0.64 VAC in phase. Record SCA output on DVM at CROSSBAR CONTROL position 271.

63. Set OPTICS ZERO switch on Indicator Control panel 2021290 to OFF, then to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF and set OPTICS MODE switch to CMC. On all Indicator Control panels except 2021290 set OPTICS MODE switch to MAN, then to ZERO for 20 seconds, then set to CMC.

64. Perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR

b. +04500 ENTR

c. +75000 ENTR

65. Measure and record SCA Trunnion CDU DAC output on DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 271 and setting Test Selector panel to 126.

66. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to HI.

---

67. Position the Optics Hand Controller to the left to drive shaft in a negative direction until the shaft TPAC indicates 120° ±10°.

68. Set OPTICS MODE switch on Indicator Control panel to CMC. Measure and record SCA Shaft CDU DAC output on DVM by setting CROSSBAR CONTROL on Primary Signal Selector to 271 and setting Test Selector panel to 127.

69. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

≠70. Set Test Selector panel to 129.

≠71. Connect SCA SXT Shaft tach input and output signals to Oscillograph by setting switches on Oscillograph Signal Selector panel as follows:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCA GDB stepper switch

≠72. Zero Oscillograph channel 1 and set gain at 20 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠73. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

≠74. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS ZERO switch (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

≠75. Hold Optics Hand Controller to left limit not longer than 20 seconds.

≠76. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT shaft tach input and output signals monitored on channels 1 and 8.

≠77. Set Test Selector panel to 148 to connect SCA SCT shaft tach output to Oscillograph.

≠78. Connect SCA SCT shaft tach input to Oscillograph by setting CHANNEL 1 switch on Oscillograph Signal Selector panel to 13.

≠79. Zero Oscillograph channel 1 and set gain at 200 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠80. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠81. Set OPTICS SPEED switch on Indicator Control panel to HI.

≠82. Hold Optics Hand Controller to right limit for approximately 20 seconds.

≠83. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT shaft tach input and output signals monitored on channels 1 and 8.

#85. Connect SCA SXT trunnion tach input to Oscillograph by setting CHANNEL 2 switch on Oscillograph Signal Selector panel to 12.

#86. Zero Oscillograph channel 2 and set gain at 20 mv/mm. Set gain of channel 8 at v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

#87. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

#88. Set OPTICS SPEED switch on Indicator Control panel to MED.

#89. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

#90. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT trunnion tach input and output signals monitored on channels 2 and 8.

#91. Set Test Selector panel to 149 to connect SCA SCT trunnion tach output to Oscillograph.

#92. Connect SCA SCT trunnion tach input to Oscillograph by setting CHANNEL 5 switch on Oscillograph Signal Selector panel to 11.

#93. Insure that CH 5 AC indicator is lighted.

#94. Zero Oscillograph channel 5 and set gain at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

#95. Set CHART DRIVE switch on Oscillograph Control to MM/SEC.

#96. Set OPTICS SPEED switch on Indicator Control panel to HI.

#97. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

#98. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set sensitivities on Oscillograph Amplifiers to OFF. Record SCA SCT trunnion tach input and output signals monitored on channels 5 and 8.

YAW, PITCH, AND ROLL ATTITUDE ERRORS

#99. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe
VERB 21 NOUN 22 Flashing
c. +00000 ENTR

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV. G PAGE 1 OF 10
INITIAL TDRR 32758 D.S. PGS 7

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY.

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Assembly. Functional operation is evaluated by checking Signal Conditioner Assembly input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G & N test configuration for maximum checkout capability.

REFERENCES PS 2015000
JDC 12204

IMPORTANT Avoid repeated slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: The items marked (≠) are applicable only for SCA P/N 2007235 and are to be omitted for SCA P/N 2007234.

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

2. Position SCA in cutout above DSKY on right side of cradle front panel assembly with SCA connectors facing bracket assembly, P/N 2900919, and attach with six captive screws. Torque screws finger tight.

3. Position SCA Deutsch connectors J1, J2, and J3 in bracket assembly 2900919 (observe placarding on bracket assembly for connector locations) and attach with hex nuts supplied with each connector. Torque hex nuts finger tight.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

3. Connect GNF harness connectors P7, P8, and P9 to SCA connectors J2, J1, and J3 respectively.

4. Perform JDC 12204 to advance system to ISS Operate mode.

5. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Adjust G & N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28.8 (±0.25) vdc.

7. Press to light OPTICS POWER ON pushbutton on Test Control panel.

8. Perform the following switch settings on the applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set
   - (1) OPTICS ZERO to OFF then to ZERO
   - (2) OPTICS TEL TRUN to SLAVE TO SXT
   - (3) OPTICS COUPLING to DIRECT
   - (4) OPTICS MODE to MAN
   - (5) OPTICS SPEED to LO

b. On all Indicator Control panels except 2021290 set
   - (1) OPTICS MODE to MAN then to ZERO
   - (2) OPTICS CONTROLLER SPEED to LO
   - (3) OPTICS CONTROLLER COUPLING to DIRECT
   - (4) OPTICS TRACKER to OFF
   - (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCA GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL switches on Primary Signal Selector panel to 271.

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit on Test Selector Panel Position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last two digits.

2. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
101	28 vdc CGC operate
102	28 vdc IMU standby
203	28 vdc optics operate

CMC WARNING

3. Set Test Selector panel to 204.

4. Perform CMC warning lamp test by entering VERB 35 into DSKY and pressing ENTR pushbutton.

5. Record that the CMC lamp on the Indicator Control panel lights and then extinguishes. Record the DVM reading after the CMC lamp has extinguished.

PIPA G/S OUTPUT

6. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA G/S output
CHANNEL 5 to 1	Y PIPA G/S output
CHANNEL 6 to 1	X PIPA G/S output
CHANNEL 8 to 4	SCA GDB stepper switch

7. Insure that CH AC indicators are lighted for channels 4, 5, and 6.

8. Set sensitivities on Oscillograph Amplifiers for channels 4, 5, and 6 to 500 mv/mm and set sensitivity of channel 8 to 5 v/cm. Use ZERO ADJ control to center all traces.

9. Perform the following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 41	NOUN 20	ENTR
c.	+00000		ENTR
d.	-04500		ENTR
e.	+03500		ENTR

10. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel.

NOTE: Perform steps 11 through 14 successively for each Test Selector panel position listed in Table I.

11. Set Test Selector panel to position listed in Table I.

12. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Ignore all light indications in step 13.

13. Perform the following DSKY operation:

VERB 35	ENTR

Table I

Test Selector Panel Position	Signal
117	Z PIPA G/S in-phase output
118	Y PIPA G/S in-phase output
119	X PIPA G/S in-phase output

14. Observe channel 8 for indication of PIPA loop opening for approximately 30 seconds then closing. Stop oscillograph. Record PIPA loop closure test results as satisfactory if loop closure indication on channel 8 corresponds to loop closure indication on channel 4, 5, or 6.

15. Perform the following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	+00000		ENTR
c.	-22500		ENTR
d.	-03500		ENTR

16. Repeat steps 11 through 14 then set all Oscillograph Amplifier sensitivities to OFF.

POWER SUPPLY AND TEMPERATURE

17. Measure and record the following voltages by setting CROSSBAR CONTROL on Primary Signal Selector panel to the position indicated and recording the DVM indication and then setting the CROSSBAR CONTROL to 271 to measure the corresponding Test Selector panel positions:

Item	Voltage	CROSSBAR CONTROL	Test Selector
a.	120 vdc PIPA supply level	259	103
b.	2.5 vdc TM bias	N/A	104
c.	3200 cps 28V	123	106
d.	800 cps 28V 1% IMU	121	113

≠e.	800 cps 28V 1% Optics	101	128
f.	PIPA temp	255	201
≠g.	IRIG temp	156	202

NOTE: The SCM TEST TMC INHIBIT lamp on the Temperature Monitor Control panel will light whenever PIPA or IRIG temperature monitor is selected. Ignore lamp indication.

≠18. Connect TPA-2 direct probes to TB4-21 hi and TB5-22 lo. Measure and record X BAR 299 voltage on the DVM.

≠19. Set the Test Selector to position 150 and X BAR to 271. Measure and record the DVM indication.

≠20. Connect TPA-2 direct probes to TB4-20 hi and TB5-33 lo. Measure and record X BAR 299 voltage on DVM.

≠21. Set the Test Selector to position 151 and X BAR to 271. Measure and record the DVM indication.

NOTE: In steps 20 and 21, an indication may or may not be present depending upon blower cycling.

IG, MG, AND OG SERVO ERRORS

22. Perform following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 41	NOUN 20	ENTR
c.	Observe:		
	VERB 21	NOUN 22	Flashing
d.	+00000		ENTR
e.	Observe:		
	VERB 22	NOUN 22	Flashing
f.	+00000		ENTR
g.	Observe:		
	VERB 23	NOUN 22	Flashing
h.	+00000		ENTR

23. Set switches on Signal Generator as follows:

RANGE to X 0.1
FREQUENCY meter to 4
FUNCTION to SQUARE
DC BALANCE to mid position
AMPLITUDE to 70

24. Perform following DSKY operations:

a.	VERB 42	ENTR
b.	VERB 33	ENTR

25. Set FUNCTION control on PAVM to 0° and set FREQUENCY control to 3200 ~.

26. Press GIMBAL SERVO TEST pushbutton on Test Selector panel. The pushbutton shall light.

27. Obtain stabilization loop servo error SCA input and output data on PAVM and DVM for each test listed in table II. For each test, perform following operations:

a. Set CROSSBAR CONTROL on Primary Signal Selector panel to position listed.

b. Set GIMBAL SERVO TEST switch on Test Selector panel to position listed.

c. Set Test Selector panel to position listed.

d. Press to light TEST START pushbutton on Test Selector panel.

Table II

Test	CROSSBAR CONTROL Position (PAVM)	GIMBAL SERVO TEST Switch Position	Test Selector Panel Position (DVM)	Signal
a	135	1	137	IG servo error
b	134	2	138	MG servo error
c	133	3	139	OG servo error

NOTE: The SCA input voltage will cause the PAVM to alternately deflect to the left and right. Determine the maximum deflection in each direction. Add the absolute values to determine maximum meter spread.

e. Record maximum meter spread of SCA input voltage on PAVM.

f. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271.

NOTE: The SCA output voltage will cause the DVM to alternately indicate a high and low value. Determine each value. Subtract lower value from higher value to obtain maximum meter spread.

g. Record maximum meter spread of SCA output voltage on DVM.

h. Press TEST STOP pushbutton on Test Selector panel. The pushbutton shall go out.

28. Press GIMBAL SERVO TEST pushbutton on Test Selector panel. The pushbutton shall go out.

29 through 35. Deleted.

IG, MG, AND OG TORQUE MOTOR CURRENTS

≠36. Insure that AMPLITUDE control on Signal Generator is set to 0.

≠37. Connect jumper between PROBES OUTPUT DIRECT jacks and CH 6 DC IN jacks on Auxiliary Input Panel.

≠38. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to AUX.

≠39. Zero Oscillograph channel 6 and set gain at 0.1 v/cm. Set gain of channel 8 at 1 v/cm and position channel 8 trace as near center as possible with a 2.5 dc bias input.

≠40. Set FREQUENCY meter on Signal Generator to 1 and RANGE switch to X1.

≠41. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠42. To monitor Signal Generator output on Oscillograph set the Oscillograph Signal Selector to channel 5-1 DC.

≠43. Obtain Oscillograph trace of torque motor currents by increasing Signal Generator AMPLITUDE control until Oscilloscope indicates value listed in table III for each test. Maintain Signal Generator setting for approximately 10 seconds. For each test, connect PSA TPA direct probes, set Test Selector panel, and set GIMBAL SERVO TEST switch as indicated.

≠44. Set GIMBAL SERVO TEST switch on Test Selector panel to OFF. Stop Oscillograph and set sensitivities on Oscillograph Amplifiers to OFF. Record Δ V SCA input signal monitored on channel 6 and Δ V SCA output signal monitored on channel 8.

1X RESOLVER SIN AND COS

45. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe
VERB 21 NOUN 22 Flashing
c. +04500 ENTR
d. Observe
VERB 22 NOUN 22 Flashing
e. +04500 ENTR
f. Observe
VERB 23 NOUN 22 Flashing
g. +04500 ENTR

46. Deleted

47. Connect SCA output and SCA input to DVM for each test listed in table IV. For each test, perform following operations:

a. Set CROSSBAR CONTROL switch to 271.
b. Set Test Selector panel to position listed and record DVM indication.
c. Immediately set CROSSBAR CONTROL switch on Primary Signal Selector panel to position listed and record DVM indication.

48. Perform following DSKY operations:

a. Verb 41 NOUN 20 ENTR

Table III

Test	Signal Generator Output	PSA TPA Test Points		Test Selector Panel Position	GIMBAL SERVO TEST Switch Position	Signal
		High	Low			
a	2V peak-to-peak	TB2-31	TB1-49	132	1	IG torque motor current
b	1V peak-to-peak	TB2-32	TB1-49	133	2	MG torque motor current
c	1V peak-to-peak	TB1-45	TB1-49	134	3	OG torque motor current

---

c	122	241	OG 1X resolver cos
d	123	144	IG 1X resolver sin
e	124	143	MG 1X resolver sin
f	125	142	OG 1X resolver sin

SHAFT AND TRUNNION CDU FINE ERROR

49. Deleted.

≠50. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠51. Connect SCA shaft CDU fine error output to DVM by setting Test Selector panel to 146. Set Primary Signal Selector to X BAR 271.

≠52. Connect jumper between PROBES OUTPUT BUFFERED jacks and PAVM IN jacks on Auxiliary Input Panel.

≠53. Connect SCA shaft CDU fine error input to PAVM by connecting PSA TPA-2 buffered probes to TB3 jack 23 (high) and TB3 jack 34 (low). On Aux Input panel run jumper from Probes output direct to PAVM input, and select PAVM Aux position on Primary Signal Select panel.

≠54. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and SET OPTICS MODE switch to MAN.

≠55. Perform following DSKY operations.

a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00011 ENTR

≠56. Position Optics Hand Controller on Indicator Control panel to the left until the PAVM indicates 1.0 VAC in phase. Record SCA output indicated on DVM 271.

≠57. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

≠58. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠59. Connect SCA trunnion CDU fine error output to DVM by setting Test Selector panel to 147. Set Primary Signal Selector to X BAR 271.

≠60. Connect SCA trunnion CDU fine error input to PAVM by connecting PSA TPA buffered probes to TB3 jack 22 (high) and TB3 jack 34 (low).

≠61. Repeat steps 54 and 55.

≠62. Position Optics Hand Controller on Indicator Control panel to a down position until PAVM indicates 0.64 VAC in phase. Record SCA output on DVM at CROSSBAR CONTROL position 271.

---

63. Set OPTICS ZERO switch on Indicator Control panel 2021290 to OFF, then to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF and set OPTICS MODE switch to CMC. On all Indicator Control panels except 2021290 set OPTICS MODE switch to MAN, then to ZERO for 20 seconds, then set to CMC.

64. Perform the following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +04500 ENTR
c. +75000 ENTR

65. Measure and record SCA Trunnion CDU DAC output on DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 271 and setting Test Selector panel to 126.

66. Set OPTICS MODE switch on Indicator Control panel to MAN and set OPTICS SPEED switch to HI.

67. Position the Optics Hand Controller to the left to drive shaft in a negative direction until the shaft TPAC indicates 120° ±10°.

68. Set OPTICS MODE switch on Indicator Control panel to CMC. Measure and record SCA Shaft CDU DAC output on DVM by setting CROSSBAR CONTROL on Primary Signal Selector to 271 and setting Test Selector panel to 127.

69. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

≠70. Set Test Selector panel to 129.

≠71. Connect SCA SXT Shaft tach input and output signals to Oscillograph by setting switches on Oscillograph Signal Selector panel as follows:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCA GDB stepper switch

≠72. Zero Oscillograph channel 1 and set gain at 20 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

≠73. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

≠74. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS ZERO switch (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

≠75. Hold Optics Hand Controller to left limit not longer than 20 seconds.

≠76. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT shaft tach input and output signals monitored on channels 1 and 8.

≠77. Set Test Selector panel to 148 to connect SCA SCT shaft tach output to Oscillograph.

≠78. Connect SCA SCT shaft tach input to Oscillograph by setting CHANNEL 1 switch on Oscillograph Signal Selector panel to 13.

#79. Zero Oscillograph channel 1 and set gain at 200 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

#80. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

#81. Set OPTICS SPEED switch on Indicator Control panel to HI.

#82. Hold Optics Hand Controller to right limit for approximately 20 seconds.

#83. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT shaft tach input and output signals monitored on channels 1 and 8.

#84. Set Test Selector panel to 130 to connect SCA SXT trunnion tach output to Oscillograph.

#85. Connect SCA SXT trunnion tach input to Oscillograph by setting CHANNEL 2 switch on Oscillograph Signal Selector panel to 12.

#86. Zero Oscillograph channel 2 and set gain at 20 mv/mm. Set gain of channel 8 at v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

#87. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

#88. Set OPTICS SPEED switch on Indicator Control panel to MED.

#89. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

#90. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT trunnion tach input and output signals monitored on channels 2 and 8.

#91. Set Test Selector panel to 149 to connect SCA SCT trunnion tach output to Oscillograph.

#92. Connect SCA SCT trunnion tach input to Oscillograph by setting CHANNEL 5 switch on Oscillograph Signal Selector panel to 11.

#93. Insure that CH 8 AC indicator is lighted.

#94. Zero Oscillograph channel 5 and set gain at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

#95. Set CHART DRIVE switch on Oscillograph Control to MM/SEC.

#96. Set OPTICS SPEED switch on Indicator Control panel to HI.

#97. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

#98. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set sensitivities on Oscillograph Amplifiers to OFF. Record SCA SCT trunnion tach input and output signals monitored on channels 5 and 8.

YAW, PITCH, AND ROLL ATTITUDE ERRORS

#99. Perform following DSKY operations:

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 **REV.** H **PAGE** 1 **OF** 11

INITIAL TDRR 32758 **D.S. PGS** 7

SUBSYSTEM BLOCK II G & N SYSTEM **ASSY.**

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Assembly. Functional operation is evaluated by checking Signal Conditioner Assembly input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G & N test configuration for maximum checkout capability.

JDC 12204

IMPORTANT Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL

NOTE: The items marked (≠) are applicable only for SCA P/N 2007235 and are to be omitted for SCA P/N 2007234.

NOTE: Do not command Zero Optics from a Trunnion angle greater than 10°.

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

2. Position SCA in cutout above DSKY on right side of cradle front panel assembly with SCA connectors facing bracket assembly, P/N 2900919, and attach with six captive screws. Torque screws finger tight.

3. Position SCA Deutsch connectors J1, J2, and J3 in bracket assembly 2900919 (observe placarding on bracket assembly for connector locations) and attach with hex nuts supplied with each connector. Torque hex nuts finger tight.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

3. Connect GNF harness connectors P7, P8, and P9 to SCA connectors J2, J1, and J3 respectively.

4. Perform JDC 12204 to advance system to ISS Operate mode.

5. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

6. Adjust G & N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28.8 (±0.25) vdc.

7. Press to light OPTICS POWER ON pushbutton on Test Control panel.

8. Perform the following switch settings on the applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set
   (1) OPTICS ZERO to OFF then to ZERO
   (2) OPTICS TEL TRUN to SLAVE TO SXT
   (3) OPTICS COUPLING to DIRECT
   (4) OPTICS MODE to MAN
   (5) OPTICS SPEED to LO

b. On all Indicator Control panels except 2021290 set
   (1) OPTICS MODE to MAN then to ZERO
   (2) OPTICS CONTROLLER SPEED to LO
   (3) OPTICS CONTROLLER COUPLING to DIRECT
   (4) OPTICS TRACKER to OFF
   (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCA GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL switches on Primary Signal Selector panel to 271.

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit on Test Selector Panel Position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last two digits.

2. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
101	28 vdc CGC operate
102	28 vdc IMU standby
203	28 vdc optics operate

CMC WARNING

3. Set Test Selector panel to 204.

4. Perform CMC warning lamp test by entering VERB 35 into DSKY and pressing ENTR pushbutton.

5. Record that the CMC lamp on the Indicator Control panel lights and then extinguishes. Record the DVM reading after the CMC lamp has extinguished.

PIPA G/S OUTPUT

6. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA G/S output
CHANNEL 5 to 1	Y PIPA G/S output
CHANNEL 6 to 1	X PIPA G/S output
CHANNEL 8 to 4	SCA GDB stepper switch

7. Insure that CH AC indicators are lighted for channels 4, 5, and 6.

8. Set sensitivities on Oscillograph Amplifiers for channels 4, 5, and 6 to 500 mv/mm and set sensitivity of channel 8 to 5 v/cm. Use ZERO ADJ control to center all traces.

9. Perform the following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 41	NOUN 20	ENTR
c.	+00000		ENTR
d.	-04500		ENTR
e.	+03500		ENTR

10. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel.

NOTE: Perform steps 11 through 14 successively for each Test Selector panel position listed in Table I.

11. Set Test Selector panel to position listed in Table I.

12. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Ignore all light indications in step 13.

13. Perform the following DSKY operation: VERB 35 ENTR

Table I

Test Selector Panel Position	Signal
117	Z PIPA G/S in-phase output
118	Y PIPA G/S in-phase output
119	X PIPA G/S in-phase output

14. Observe channel 8 for indication of PIPA loop opening for approximately 30 seconds then closing. Stop oscillograph. Record PIPA loop closure test results as satisfactory if loop closure indication on channel 8 corresponds to loop closure indication on channel 4, 5, or 6.

15. Perform the following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	+00000		ENTR
c.	-22500		ENTR
d.	-03500		ENTR

16. Repeat steps 11 through 14 then set all Oscillograph Amplifier sensitivities to OFF.

POWER SUPPLY AND TEMPERATURE

17. Measure and record the following voltages by setting CROSSBAR CONTROL on Primary Signal Selector panel to the position indicated and recording the DVM indication and then setting the CROSSBAR CONTROL to 271 to measure the corresponding Test Selector panel positions:

Item	Voltage	CROSSBAR CONTROL	Test Selector
a.	120 vdc PIPA supply level	259	103
b.	2.5 vdc TM bias	N/A	104
c.	3200 cps 28V	123	106
d.	800 cps 28V 1% IMU	121	113

≠e.	800 cps 28V 1% Optics	101	128
f.	PIPA temp	255	201
≠g.	IRIG temp	156	202

NOTE: The SCM TEST TMC INHIBIT lamp on the Temperature Monitor Control panel will light whenever PIPA or IRIG temperature monitor is selected. Ignore lamp indication.

≠18. Connect TPA-2 direct probes to TB4-21 hi and TB5-22 lo. Measure and record X BAR 299 voltage on the DVM.

≠19. Set the Test Selector to position 150 and X BAR to 271. Measure and record the DVM indication.

≠20. Connect TPA-2 direct probes to TB4-20 hi and TB5-33 lo. Measure and record X BAR 299 voltage on DVM.

≠21. Set the Test Selector to position 151 and X BAR to 271. Measure and record the DVM indication.

NOTE: In steps 20 and 21, an indication may or may not be present depending upon blower cycling.

IG, MG, AND OG SERVO ERRORS

22. Perform following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 41	NOUN 20	ENTR
c.	Observe:		
	VERB 21	NOUN 22	Flashing
d.	+00000		ENTR
e.	Observe:		
	VERB 22	NOUN 22	Flashing
f.	+00000		ENTR
g.	Observe:		
	VERB 23	NOUN 22	Flashing
h.	+00000		ENTR

23. Set switches on Signal Generator as follows:

RANGE to X 0.1
FREQUENCY meter to 2
FUNCTION to SQUARE
DC BALANCE to mid position
AMPLITUDE to 70

24. Perform following DSKY operations:

a.	VERB 42	ENTR
b.	VERB 33	ENTR

25. Set FUNCTION control on PAVM to 0° and set FREQUENCY control to 3200~.

26. Press GIMBAL SERVO TEST pushbutton on Test Selector panel. The pushbutton shall light.

27. Obtain stabilization loop servo error SCA input and output data on PAVM and DVM for each test listed in table II. For each test, perform following operations:

a. Set CROSSBAR CONTROL on Primary Signal Selector panel to position listed.

b. Set GIMBAL SERVO TEST switch on Test Selector panel to position listed.

c. Set Test Selector panel to position listed.

d. Press to light TEST START pushbutton on Test Selector panel.

Table II

Test	CROSSBAR CONTROL Position (PAVM)	GIMBAL SERVO TEST Switch Position	Test Selector Panel Position (DVM)	Signal
a	135	1	137	IG servo error
b	134	2	138	MG servo error
c	133	3	139	OG servo error

NOTE: The SCA input voltage will cause the PAVM to alternately deflect to the left and right. Determine the maximum deflection in each direction. Add the absolute values to determine maximum meter spread.

e. Record maximum meter spread of SCA input voltage on PAVM.

f. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271.

NOTE: The SCA output voltage will cause the DVM to alternately indicate a high and low value. Determine each value. Subtract lower value from higher value to obtain maximum meter spread.

g. Record maximum meter spread of SCA output voltage on DVM.

h. Press TEST STOP pushbutton on Test Selector panel. The pushbutton shall go out.

28. Press GIMBAL SERVO TEST pushbutton on Test Selector panel. The pushbutton shall go out.

29 through 35. Deleted.

IG, MG, AND OG TORQUE MOTOR CURRENTS

≠36. Insure that AMPLITUDE control on Signal Generator is set to 0.

≠37. Connect jumper between PROBES OUTPUT DIRECT jacks and CH 6 DC IN jacks on Auxiliary Input Panel.

≠38. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to AUX.

≠39. Zero Oscillograph channel 6 and set gain at 0.1 v/cm. Set gain of channel 8 at 1 v/cm and position channel 8 trace as near center as possible with a 2.5 dc bias input.

≠40. Set FREQUENCY meter on Signal Generator to 1 and RANGE switch to X1.

≠41. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠42. To monitor Signal Generator output on Oscillograph set the Oscillograph Signal Selector to channel 5-1 DC.

≠43. Obtain Oscillograph trace of torque motor currents by increasing Signal Generator AMPLITUDE control until Oscilloscope indicates value listed in table III for each test. Maintain Signal Generator setting for approximately 10 seconds. For each test, connect PSA TPA direct probes, set Test Selector panel, and set GIMBAL SERVO TEST switch as indicated.

≠44. Set GIMBAL SERVO TEST switch on Test Selector panel to OFF. Stop Oscillograph and set sensitivities on Oscillograph Amplifiers to OFF. Record Δ V SCA input signal monitored on channel 6 and Δ V SCA output signal monitored on channel 8.

1X RESOLVER SIN AND COS

45. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR

b. Observe

VERB 21 NOUN 22 Flashing

c. +04500 ENTR

d. Observe

VERB 22 NOUN 22 Flashing

e. +04500 ENTR

f. Observe

VERB 23 NOUN 22 Flashing

g. +04500 ENTR

46. Deleted

47. Connect SCA output and SCA input to DVM for each test listed in table IV. For each test, perform following operations:

a. Set CROSSBAR CONTROL switch to 271.

b. Set Test Selector panel to position listed and record DVM indication.

c. Immediately set CROSSBAR CONTROL switch on Primary Signal Selector panel to position listed and record DVM indication.

48. Perform following DSKY operations:

a. Verb 41 NOUN 20 ENTR

Table III

Test	Signal Generator Output	PSA TPA Test Points		Test Selector Panel Position	GIMBAL SERVO TEST Switch Position	Signal
		High	Low			
a	2V peak-to-peak	TB2-31	TB1-49	132	1	IG torque motor current
b	1V peak-to-peak	TB2-32	TB1-49	133	2	MG torque motor current
c	1V peak-to-peak	TB1-45	TB1-49	134	3	OG torque motor current

---

b. Observe

VERB 21 NOUN 22 Flashing

c. +00000 ENTR

d. Observe

VERB 22 NOUN 22 Flashing

e. +00000 ENTR

f. Observe

VERB 23 NOUN 22 Flashing

g. +00000 ENTR

Table IV

Test	Test Selector Panel Position	CROSS-BAR CON-TROL Position	Signal
a	120	243	IG 1X resolver cos
b	121	242	MG 1X resolver cos
c	122	241	OG 1X resolver cos
d	123	144	IG 1X resolver sin
e	124	143	MG 1X resolver sin
f	125	142	OG 1X resolver sin

SHAFT AND TRUNNION CDU FINE ERROR

49. Deleted.

≠50. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠51. Connect SCA shaft CDU fine error output to DVM by setting Test Selector panel to 146. Set Primary Signal Selector to X BAR 271.

≠52. Connect jumper between PROBES OUTPUT BUFFERED jacks and PAVM IN jacks on Auxiliary Input Panel.

≠53. Connect SCA shaft CDU fine error input to PAVM by connecting PSA TPA-2 buffered probes to TB3 jack 23 (high) and TB3 jack 34 (low). On Aux Input panel run jumper from Probes output direct to PAVM input, and select PAVM Aux position on Primary Signal Select panel.

≠54. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and SET OPTICS MODE switch to MAN.

≠55. Perform following DSKY operations.

a. VERB 21 NOUN 10 ENTR

b. 00012 ENTR

c. 00011 ENTR

≠56. Position Optics Hand Controller on Indicator Control panel to the left until the PAVM indicates 1.0 VAC in phase. Record SCA output indicated on DVM 271.

≠57. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

≠58. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠59. Connect SCA trunnion CDU fine error output to DVM by setting Test Selector panel to 147. Set Primary Signal Selector to X BAR 271.

≠60. Connect SCA trunnion CDU fine error input to PAVM by connecting PSA TPA buffered probes to TB3 jack 22 (high) and TB3 jack 34 (low).

≠61. Repeat steps 54 and 55.

≠62. Position Optics Hand Controller on Indicator Control panel to a down position until PAVM indicates 0.64 VAC in phase.

Record SCA output on DVM at CROSSBAR CONTROL position 271.

63. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 21 NOUN 10 ENTR
c. 00012 ENTR
d. 00200 ENTR
e. VERB 21 NOUN 10 ENTR

n. VERB 21 NOUN 10 ENTR
o. 00014 ENTR
p. 06000 ENTR

64. Press to light SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton on Test Selector panel.

65. Measure and record SCA Trunnion CDU DAC output on DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 271 and setting Test Selector panel to 126.

66. Measure and record the SCA Shaft CDU DAC output on DVM by setting the Test Selector panel to 127.

67. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 21 NOUN 10 ENTR
c. 00012 ENTR
d. 00200 ENTR
e. VERB 21 NOUN 10 ENTR
f. 00012 ENTR

68. Measure and record SCA Trunnion CDU DAC output on DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 271 and setting Test Selector panel to 126.

69. Measure and record the SCA Shaft CDU DAC output on DVM by setting the Test Selector panel to 127.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

≠70. Set Test Selector panel to 129.

≠71. Connect SCA SXT Shaft tach input and output signals to Oscillograph by setting switches on Oscillograph Signal Selector panel as follows:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCA GDB stepper switch

≠72. Zero Oscillograph channel 1 and set gain at 20 mv/mm. Set gain of channel 8 at

1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

✓73. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

✓74. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS ZERO switch (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

✓75. Hold Optics Hand Controller to left limit not longer than 20 seconds.

✓76. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT shaft tach input and output signals monitored on channels 1 and 8.

✓77. Set Test Selector panel to 148 to connect SCA SCT shaft tach output to Oscillograph.

✓78. Connect SCA SCT shaft tach input to Oscillograph by setting CHANNEL 1 switch on Oscillograph Signal Selector panel to 13.

✓79. Zero Oscillograph channel 1 and set gain at 200 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

✓80. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

✓81. Set OPTICS SPEED switch on Indicator Control panel to HI.

✓82. Hold Optics Hand Controller to right limit for approximately 20 seconds.

✓83. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT shaft tach input and output signals monitored on channels 1 and 8.

✓84. Set Test Selector panel to 130 to connect SCA SXT trunnion tach output to Oscillograph.

✓85. Connect SCA SXT trunnion tach input to Oscillograph by setting CHANNEL 2 switch on Oscillograph Signal Selector panel to 12.

✓86. Zero Oscillograph channel 2 and set gain at 20 mv/mm. Set gain of channel 8 at v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

✓87. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

✓88. Set OPTICS SPEED switch on Indicator Control panel to MED.

✓89. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

✓90. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT trunnion tach input and output signals monitored on channels 2 and 8.

✓91. Set Test Selector panel to 149 to connect SCA SCT trunnion tach output to Oscillograph.

✓92. Connect SCA SCT trunnion tach input to Oscillograph by setting CHANNEL 5 switch on Oscillograph Signal Selector panel to 11.

✓93. Insure that CH 5 AC indicator is lighted.

✓94. Zero Oscillograph channel 5 and set gain at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

✓95. Set CHART DRIVE switch on Oscillograph Control to MM/SEC.

✓96. Set OPTICS SPEED switch on Indicator Control panel to HI.

✓97. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

✓98. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set sensitivities on Oscillograph Amplifiers to OFF. Record SCA SCT trunnion tach input and output signals monitored on channels 5 and 8.

YAW, PITCH, AND ROLL ATTITUDE ERRORS

✓99. Perform following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe		
	VERB 21	NOUN 22	Flashing
c.	+00000		ENTR
d.	Observe		
	VERB 22	NOUN 22	Flashing
e.	+00000		ENTR
f.	Observe		
	VERB 23	NOUN 22	Flashing
g.	+00000		ENTR

✓100. Perform following DSKY operations:

a.	VERB 21	NOUN 10	ENTR
b.	00012		ENTR
c.	00060		ENTR

NOTE: ISS warning lamp on Indicator Control panel may light during step 101. Ignore lamp indication.

✓101. Perform following DSKY operations:

a.	VERB 43		ENTR
b.	Observe		
	VERB 21	NOUN 22	Flashing
c.	+01600		ENTR
d.	Observe		
	VERB 22	NOUN 22	Flashing
e.	+01600		ENTR
f.	Observe		
	VERB 23	NOUN 22	Flashing
g.	+01600		ENTR

✓102. Connect jumper between PROBES OUTPUT DIRECT jacks and PAVM IN jacks on Auxiliary Input Panel. Set PAVM select switch to Aux position on Primary Signal Select panel.

✓103. Connect SCA input to PAVM and SCA output to DVM by connecting PSA TPA direct probes to test points listed in table V and setting Test Selector panel to positions indicated. Record SCA input on PAVM and SCA output on DVM (X BAR 271) for each test.

104. Perform JDC 12204 to turn off G & N system.

105. Perform calculations on data sheets.

Table V

Test	PSA TPA Test Points		Test Selector Panel Position	Signal
	High	Low		
a	TB4-43	TB4-47	116	Roll attitude error
b	TB4-44	TB4-48	114	Yaw attitude error
c	TB4-45	TB4-49	115	Pitch attitude error

BLOCK II SIGNAL CONDITIONER
JOB FUNCTIONAL CHECKOUT

JDC 12224 REV. J PAGE 1 OF 11
INITIAL TDRR 32758 D.S. PGS 7

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY.

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Assembly. Functional operation is evaluated by checking Signal Conditioner Assembly input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G & N test configuration for maximum checkout capability.

REFERENCES PS 2015000
JDC 12204

IMPORTANT Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

INTERVAL

TOOLS AND MATERIAL Decade Inductance, General Radio 1490F or equivalent

NOTE: The items marked (≠) are applicable only for SCA P/N 2007235 and are to be omitted for SCA P/N 2007234.

NOTE: Do not command Zero Optics from a Trunnion angle greater than 10°.

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

2. Position SCA in cutout above DSKY on right side of cradle front panel assembly with SCA connectors facing bracket assembly, P/N 2900919, and attach with six captive screws. Torque screws finger tight.

3. Position SCA Deutsch connectors J1, J2, and J3 in bracket assembly 2900919 (observe placarding on bracket assembly for connector locations) and attach with hex nuts supplied with each connector. Torque hex nuts finger tight.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

3. Connect GNF harness connectors P7, P8, and P9 to SCA connectors J2, J1, and J3 respectively.

4. Perform JDC 12204 to advance system to ISS Operate mode.

5. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

FORM 00133A
Chg. 3-18-66

---

6. Adjust G & N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28.8 (±0.25) vdc.

7. Press to light OPTICS POWER ON pushbutton on Test Control panel.

8. Perform the following switch settings on the applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set
   (1) OPTICS ZERO to OFF then to ZERO
   (2) OPTICS TEL TRUN to SLAVE TO SXT
   (3) OPTICS COUPLING to DIRECT
   (4) OPTICS MODE to MAN
   (5) OPTICS SPEED to LO

b. On all Indicator Control panels except 2021290 set
   (1) OPTICS MODE to MAN then to ZERO
   (2) OPTICS CONTROLLER SPEED to LO
   (3) OPTICS CONTROLLER COUPLING to DIRECT
   (4) OPTICS TRACKER to OFF
   (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCA GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL switches on Primary Signal Selector panel to 271.

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit on Test Selector Panel Position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last two digits.

2. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
101	28 vdc CGC operate
102	28 vdc IMU standby
203	28 vdc optics operate

CMC WARNING

3. Set Test Selector panel to 204.

4. Perform CMC warning lamp test by entering VERB 35 into DSKY and pressing ENTR pushbutton.

5. Record that the CMC lamp on the Indicator Control panel lights and then extinguishes. Record the DVM reading after the CMC lamp has extinguished.

PIPA G/S OUTPUT

6. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA G/S output
CHANNEL 5 to 1	Y PIPA G/S output
CHANNEL 6 to 1	X PIPA G/S output
CHANNEL 8 to 4	SCA GDB stepper switch

7. Insure that CH AC indicators are lighted for channels 4, 5, and 6.

8. Set sensitivities on Oscillograph Amplifiers for channels 4, 5, and 6 to 500 mv/mm and set sensitivity of channel 8 to 5 v/cm. Use ZERO ADJ control to center all traces.

9. Perform the following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 41	NOUN 20	ENTR
c.	+00000		ENTR
d.	-04500		ENTR
e.	+03500		ENTR

10. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel.

NOTE: Perform steps 11 through 14 successively for each Test Selector panel position listed in Table I.

11. Set Test Selector panel to position listed in Table I.

12. Start Oscillograph by setting CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Ignore all light indications in step 13.

13. Perform the following DSKY operation:

VERB 35 ENTR

Table I

Test Selector Panel Position	Signal
117	Z PIPA G/S in-phase output
118	Y PIPA G/S in-phase output
119	X PIPA G/S in-phase output

14. Observe channel 8 for indication of PIPA loop opening for approximately 30 seconds then closing. Stop oscillograph. Record PIPA loop closure test results as satisfactory if loop closure indication on channel 8 corresponds to loop closure indication on channel 4, 5, or 6.

15. Perform the following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	+00000		ENTR
c.	-22500		ENTR
d.	-03500		ENTR

16. Repeat steps 11 through 14 then set all Oscillograph Amplifier sensitivities to OFF.

POWER SUPPLY AND TEMPERATURE

17. Measure and record the following voltages by setting CROSSBAR CONTROL on Primary Signal Selector panel to the position indicated and recording the DVM indication and then setting the CROSSBAR CONTROL to 271 to measure the corresponding Test Selector panel positions:

Item	Voltage	CROSSBAR CONTROL	Test Selector
a.	120 vdc PIPA supply level	259	103
b.	2.5 vdc TM bias	N/A	104
c.	3200 cps 28V	123	106
d.	800 cps 28V 1% IMU	121	113

≠e.	800 cps 28V 1% Optics	101	128
f.	PIPA temp	255	201
≠g.	IRIG temp	156	202

NOTE: The SCM TEST TMC INHIBIT lamp on the Temperature Monitor Control panel will light whenever PIPA or IRIG temperature monitor is selected. Ignore lamp indication.

≠18. Connect TPA-2 direct probes to TB4-21 hi and TB5-22 lo. Measure and record X BAR 299 voltage on the DVM.

≠19. Set the Test Selector to position 150 and X BAR to 271. Measure and record the DVM indication.

≠20. Connect TPA-2 direct probes to TB4-20 hi and TB5-33 lo. Measure and record X BAR 299 voltage on DVM.

≠21. Set the Test Selector to position 151 and X BAR to 271. Measure and record the DVM indication.

NOTE: In steps 20 and 21, an indication may or may not be present depending upon blower cycling.

IG, MG, AND OG SERVO ERRORS

22. Perform following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 41	NOUN 20	ENTR
c.	Observe:		
	VERB 21	NOUN 22	Flashing
d.	+00000		ENTR
e.	Observe:		
	VERB 22	NOUN 22	Flashing
f.	+00000		ENTR
g.	Observe:		
	VERB 23	NOUN 22	Flashing
h.	+00000		ENTR

23. Set switches on Signal Generator as follows:

RANGE to X 0.1
FREQUENCY meter to 2
FUNCTION to SQUARE
DC BALANCE to mid position
AMPLITUDE to 70

24. Perform following DSKY operations:

a.	VERB 42	ENTR
b.	VERB 33	ENTR

25. Set FUNCTION control on PAVM to 0° and set FREQUENCY control to 3200~.

26. Press GIMBAL SERVO TEST pushbutton on Test Selector panel. The pushbutton shall light.

27. Obtain stabilization loop servo error SCA input and output data on PAVM and DVM for each test listed in table II. For each test, perform following operations:

a. Set CROSSBAR CONTROL on Primary Signal Selector panel to position listed.

b. Connect Decade Inductance to TPA #2 as listed in Table II.

c. Press to light GIMBAL SERVO TEST pushbutton on Test Selector panel and set GIMBAL SERVO TEST switch to position listed.

d. Set Test Selector panel to position listed.

e. Press to light TEST START pushbutton on Test Selector panel.

f. Set SCOPE "A" INPUT SIGNAL switch on Primary Signal Selector panel to SIG 1 and set SCOPE "A" INPUT REFERENCE switch to 3.

g. Monitor the Lissajous pattern on the Oscilloscope and adjust the Decade Inductance until the Lissajous pattern indicates a minimum phase shift.

NOTE: The SCA input voltage will cause the PAVM to alternately deflect to the left and right. Determine the maximum deflection in each direction. Add the absolute values to determine maximum meter spread.

h. Record maximum meter spread of SCA input voltage on PAVM.

i. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271.

NOTE: The SCA output voltage will cause the DVM to alternately indicate a high and low value. Determine each value. Subtract lower value from higher value to obtain maximum meter spread.

j. Record maximum meter spread of SCA output voltage on DVM.

k. Press TEST STOP pushbutton on Test Selector panel. The pushbutton shall go out.

28. Press GIMBAL SERVO TEST pushbutton on Test Selector panel. The pushbutton shall go out.

29 through 35. Deleted.

Table II

Test	Connect Decade Inductance To TPA #2	CROSSBAR CONTROL Position (PAVM)	GIMBAL SERVO TEST Switch Position	Test Selector Panel Position (DVM)	Signal
a	TB5-32 (HI) TB5-40 (LO)	135	1	137	IG servo error
b	TB5-41 (HI) TB5-40 (LO)	134	2	138	MG servo error
c	TB5-31 (HI) TB5-40 (LO)	133	3	139	OG servo error

IG, MG, AND OG TORQUE MOTOR CURRENTS

≠36. Insure that AMPLITUDE control on Signal Generator is set to 0.

≠37. Connect jumper between PROBES OUTPUT DIRECT jacks and CH 6 DC IN jacks on Auxiliary Input Panel.

≠38. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to AUX.

≠39. Zero Oscillograph channel 6 and set gain at 0.1 v/cm. Set gain of channel 8 at 1 v/cm and position channel 8 trace as near center as possible with a 2.5 dc bias input.

≠40. Set FREQUENCY meter on Signal Generator to 1 and RANGE switch to X1.

≠41. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

≠42. To monitor Signal Generator output on Oscillograph set the Oscillograph Signal Selector to channel 8-1 DC.

≠43. Obtain Oscillograph trace of torque motor currents by increasing Signal Generator AMPLITUDE control until Oscilloscope indicates value listed in table III for each test. Maintain Signal Generator setting for approximately 10 seconds. For each test, connect PSA TPA direct probes, set Test Selector panel, and set GIMBAL SERVO TEST switch as indicated.

≠44. Set GIMBAL SERVO TEST switch on Test Selector panel to OFF. Stop Oscillograph and set sensitivities on Oscillograph Amplifiers to OFF. Record ΔVSCA input signal monitored on channel 6 and ΔVSCA output signal monitored on channel 8.

1X RESOLVER SIN AND COS

45. Perform following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe		
	VERB 21	NOUN 22	Flashing
c.	+04500		ENTR
d.	Observe		
	VERB 22	NOUN 22	Flashing
e.	+04500		ENTR
f.	Observe		
	VERB 23	NOUN 22	Flashing
g.	+04500		ENTR

Table III

Test	Signal Generator Output	PSA TPA Test Points		Test Selector Panel Position	GIMBAL SERVO TEST Switch Position	Signal
		High	Low			
a	2V peak-to-peak	TB2-31	TB1-49	132	1	IG torque motor current
b	1V peak-to-peak	TB2-32	TB1-49	133	2	MG torque motor current
c	1V peak-to-peak	TB1-45	TB1-49	134	3	OG torque motor current

---

46. Deleted

47. Connect SCA output and SCA input to DVM for each test listed in table IV. For each test, perform following operations:

a. Set CROSSBAR CONTROL switch to 271.

b. Set Test Selector panel to position listed and record DVM indication.

c. Immediately set CROSSBAR CONTROL switch on Primary Signal Selector panel to position listed and record DVM indication.

≠48. Perform following DSKY operations:

a.	Verb 41	NOUN 20	ENTR
b.	Observe		
	VERB 21	NOUN 22	Flashing
c.	+00000		ENTR
d.	Observe		
	VERB 22	NOUN 22	Flashing
e.	+00000		ENTR
f.	Observe		
	VERB 23	NOUN 22	Flashing
g.	+00000		ENTR

SHAFT AND TRUNNION CDU FINE ERROR

49. Deleted.

≠50. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠51. Connect SCA shaft CDU fine error output to DVM by setting Test Selector panel to 146. Set Primary Signal Selector to X BAR 271.

≠52. Connect jumper between PROBES OUTPUT BUFFERED jacks and PAVM IN jacks on Auxiliary Input Panel.

Table IV

Test	Test Selector Panel Position	CROSSBAR CONTROL Position	Signal
a	120	243	IG 1X resolver cos
b	121	242	MG 1X resolver cos
c	122	241	OG 1X resolver cos
d	123	144	IG 1X resolver sin
e	124	143	MG 1X resolver sin
f	125	142	OG 1X resolver sin

≠53. Connect SCA shaft CDU fine error input to PAVM by connecting PSA TPA-2 buffered probes to TB3 jack 23 (high) and TB3 jack 34 (low). On Aux Input panel run jumper from Probes output direct to PAVM input, and select PAVM Aux position on Primary Signal Select panel.

≠54. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and SET OPTICS MODE switch to MAN.

≠55. Perform following DSKY operations,

a.	VERB 21	NOUN 10	ENTR
b.	00012		ENTR
c.	00011		ENTR

≠56. Position Optics Hand Controller on Indicator Control panel to the left until the PAVM indicates 1.0 VAC in phase. Record SCA output indicated on DVM 271.

≠57. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290 set OPTICS MODE switch to ZERO.

≠58. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

≠59. Connect SCA trunnion CDU fine error output to DVM by setting Test Selector panel to 147. Set Primary Signal Selector to X BAR 271.

≠60. Connect SCA trunnion CDU fine error input to PAVM by connecting PSA TPA buffered probes to TB3 jack 22 (high) and TB3 jack 34 (low).

≠61. Repeat steps 54 and 55.

≠62. Position Optics Hand Controller on Indicator Control panel to a down position until PAVM indicates 0.64 VAC in phase. Record SCA output on DVM at CROSSBAR CONTROL position 271.

63. Perform the following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 21	NOUN 10	ENTR
c.	00012		ENTR
d.	00200		ENTR
e.	VERB 21	NOUN 10	ENTR
f.	00012		ENTR
g.	00202		ENTR
h.	VERB 21	NOUN 01	ENTR
i.	00053		ENTR
j.	40000		ENTR
k.	VERB 21	NOUN 01	ENTR
l.	00054		ENTR
m.	40000		ENTR
n.	VERB 21	NOUN 10	ENTR
o.	00014		ENTR
p.	06000		ENTR

64. Press to light SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton on Test Selector panel.

65. Measure and record SCA Trunnion CDU DAC output on DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 271 and setting Test Selector panel to 126.

66. Measure and record the SCA Shaft CDU DAC output on DVM by setting the Test Selector panel to 127.

67. Perform the following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 21	NOUN 10	ENTR
c.	00012		ENTR
d.	00200		ENTR
e.	VERB 21	NOUN 10	ENTR

68. Measure and record SCA Trunnion CDU DAC output on DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 271 and setting Test Selector panel to 126.

69. Measure and record the SCA Shaft CDU DAC output on DVM by setting the Test Selector panel to 127.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

ϕ70. Set Test Selector panel to 129.

ϕ71. Connect SCA SXT Shaft tach input and output signals to Oscillograph by setting switches on Oscillograph Signal Selector panel as follows:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCA GDB stepper switch

ϕ72. Zero Oscillograph channel 1 and set gain at 20 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

ϕ73. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

ϕ74. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS ZERO switch (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

ϕ75. Hold Optics Hand Controller to left limit not longer than 20 seconds.

ϕ76. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT shaft tach input and output signals monitored on channels 1 and 8.

ϕ77. Set Test Selector panel to 148 to connect SCA SCT shaft tach output to Oscillograph.

ϕ78. Connect SCA SCT shaft tach input to Oscillograph by setting CHANNEL 1 switch on Oscillograph Signal Selector panel to 13.

ϕ79. Zero Oscillograph channel 1 and set gain at 200 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

ϕ80. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

ϕ81. Set OPTICS SPEED switch on Indicator Control panel to HI.

ϕ82. Hold Optics Hand Controller to right limit for approximately 20 seconds.

ϕ83. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT shaft tach input and output signals monitored on channels 1 and 8.

ϕ84. Set Test Selector panel to 130 to connect SCA SXT trunnion tach output to Oscillograph.

ϕ85. Connect SCA SXT trunnion tach input to Oscillograph by setting CHANNEL 2 switch on Oscillograph Signal Selector panel to 12.

ϕ86. Zero Oscillograph channel 2 and set gain at 20 mv/mm. Set gain of channel 8 at v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

ϕ87. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

ϕ88. Set OPTICS SPEED switch on Indicator Control panel to MED.

ϕ89. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

ϕ90. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT trunnion tach input and output signals monitored on channels 2 and 8.

ϕ91. Set Test Selector panel to 149 to connect SCA SCT trunnion tach output to Oscillograph.

ϕ92. Connect SCA SCT trunnion tach input to Oscillograph by setting CHANNEL 5 switch on Oscillograph Signal Selector panel to 11.

ϕ93. Insure that CH 5 AC indicator is lighted.

ϕ94. Zero Oscillograph channel 5 and set gain at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

ϕ95. Set CHART DRIVE switch on Oscillograph Control to MM/SEC.

ϕ96. Set OPTICS SPEED switch on Indicator Control panel to HI.

ϕ97. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

ϕ98. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set sensitivities on Oscillograph Amplifiers to OFF. Record SCA SCT trunnion tach input and output signals monitored on channels 5 and 8.

YAW, PITCH, AND ROLL ATTITUDE ERRORS

ϕ99. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR

VERB 23 NOUN 22 Flashing
g. +01600 ENTR

ϕ102. Connect jumper between PROBES OUTPUT DIRECT jacks and PAVM IN jacks on Auxiliary Input Panel. Set PAVM select switch to Aux position on Primary Signal Select panel.

ϕ103. Connect SCA input to PAVM and SCA output to DVM by connecting PSA TPA direct probes to test points listed in table V and setting Test Selector panel to positions indicated. Record SCA input on PAVM and SCA output on DVM (X BAR 271) for each test.

104. Perform JDC 12204 to turn off G& N system.

105. Perform calculations on data sheets.

Table V

Test	PSA TPA Test Points		Test Selector Panel Position	Signal
	High	Low		
a	TB4-43	TB4-47	116	Roll attitude error
b	TB4-44	TB4-48	114	Yaw attitude error
c	TB4-45	TB4-49	115	Pitch attitude error

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV. K PAGE 1 OF 15

INITIAL TDRR 32758 D.S. PGS 9

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Assembly. Functional operation is evaluated by checking Signal Conditioner Assembly input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G & N test configuration for maximum checkout capability.

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL Decade Inductance, General Radio 1490F or equivalent

IMPORTANT: 1. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

2. Insure that connector assembly (2003099) is removed and cable W226-P1 is connected to CGC test connector before proceeding with this JDC.

NOTE: The items marked with an asterisk (*) are applicable only for SCA P/N 2007035 and are to be omitted for SCA P/N 2007234.

NOTE: Do not command zero optics from a trunnion angle greater than 10°.

A. PREPARATION

1. Perform JDC 12204 to downmode to CIA PILOT POWER mode.

2. Position SCA in cutout above DSKY on right side of cradle front panel assembly with SCA connectors facing bracket assembly, P/N 2900919, and attach with six captive screws. Torque screws finger tight.

3. Position SCA Deutsch connectors J1, J2, and J3 in bracket assembly (observe placarding on bracket assembly for connector locations) and attach with hex nuts

VERIFICATION WITH SIDL REQUIRED BEFORE USE

SUBSYSTEM G & N SYSTEM

ASSY

supplied with each connector. Torque hex nuts finger tight.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

4. Connect GNF harness connectors P7, P8, and P9 to SCA connectors J2, J1, and J3, respectively.

5. Perform JDC 12204 to advance system to ISS Operate mode.

6. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173.

7. Adjust G&N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28.8 (±0.25) vdc.

8. Press to light OPTICS POWER ON pushbutton on Test Control panel.

9. Perform following switch settings on applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set -
  (1) OPTICS ZERO to OFF then to ZERO
  (2) OPTICS TEL TRUN to SLAVE TO SXT
  (3) OPTICS COUPLING to DIRECT
  (4) OPTICS MODE to MAN
  (5) OPTICS SPEED to LO

b. On all Indicator Control panels except 2021290 set -
  (1) OPTICS MODE to MAN then to ZERO
  (2) OPTICS CONTROLLER SPEED to LO
  (3) OPTICS CONTROLLER COUPLING to DIRECT
  (4) OPTICS TRACKER to OFF
  (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCA GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 271.

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit of Test Selector panel position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last last two digits of Test Selector panel position.

2. Set Test Selector panel to 101 and measure and record 28 vdc CGC operate voltage on DVM. (SCA output.)

DATE 26 JAN 67

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV K PAGE 3 OF 15

SUBSYSTEM G & N SYSTEM

ASSY

3. Set Test Selector panel to 102 and measure and record 28 vdc IMU standby voltage on DVM. (SCA output.)

4. Set Test Selector panel to 203 and measure and record 28 vdc optics operate voltage on DVM. (SCA output.)

CMC WARNING

5. Set Test Selector panel to 204 to monitor +28 vdc CMC warning voltage on DVM.

6. Enter VERB 35 into DSKY and press ENTR pushbutton.

7. Record that CMC lamp on Indicator Control panel lights and then goes out. Record DVM indication after CMC lamp goes out. (SCA otuput.)

PIPA G/S OUTPUT

8. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA G/S output
CHANNEL 5 to 1	Y PIPA G/S output
CHANNEL 6 to 1	X PIPA G/S output
CHANNEL 8 to 4	SCA GDB stepper switch

9. Insure that CH4AC, CH5AC, and CH6AC pushbuttons on Oscillograph Signal Selector panel are lighted.

10. Set sensitivities on Oscillograph Amplifiers for channels 4, 5, and 6 to 500 MV/MM and set sensitivity of channel 8 to 5 V/CM. Use ZERO ADJ control to center all traces.

11. Perform following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. Observe:
  VERB 21 NOUN 22 Flashing
d. +00000 ENTR
e. Observe:
  VERB 22 NOUN 22 Flashing
f. -04500 ENTR
g. Observe:
  VERB 23 NOUN 22 Flashing
h. +03500 ENTR

12. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel.

13. Set Test Selector panel to 117 to monitor Z PIPA G/S in-phase output on channels 4 and 8.

14. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Ignore all lamp indications which occur during performance of step 15.

15. Enter VERB 35 into DSKY and press ENTR pushbutton.

16. Observe channel 8 for indication of PIPA loop opening for approximately 30 seconds and then closing.

17. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record Z PIPA loop closure test results as satisfactory if loop closure indication on channel 8 (SCA output) corresponds to loop closure indication on channel 4 (SCA input).

DATE 26 JAN 67

e. -22500 ENTR
f. Observe:
  VERB 23 NOUN 22 Flashing
g. -03500 ENTR

29. Repeat steps 13 through 27 and then set all Oscillograph Amplifier sensitivities to OFF.

POWER SUPPLY AND TEMPERATURE

30. Set CROSSBAR CONTROL on Primary Signal Selector panel to 259 and measure and record 120 vdc PIPA supply voltage on DVM. (SCA input.)

31. Set CROSSBAR CONTROL to 271.

32. Set Test Selector panel to 103 and measure and record 120 vdc PIPA supply voltage on DVM. (SCA output.)

33. Set Test Selector panel to 104 and measure and record 2.5 vdc TM bias voltage on DVM.

DATE 26 JAN 67

34. Set CROSSBAR CONTROL on Primary Signal Selector panel to 123 and measure and record 28 volt 3200 cps supply voltage on DVM. (SCA input.)

35. Set CROSSBAR CONTROL to 271.

36. Set Test Selector panel to 106 and measure and record 28 volt 3200 cps supply voltage on DVM. (SCA output.)

37. Set CROSSBAR CONTROL on Primary Signal Selector panel to 121 and measure and record IMU 28 volt 800 cps 1% supply voltage on DVM. (SCA input.)

38. Set CROSSBAR CONTROL to 271.

39. Set Test Selector panel to 113 and measure and record IMU 28 volt 800 cps 1% supply voltage on DVM. (SCA output.)

*40. Set CROSSBAR CONTROL on Primary Signal Selector panel to 101 and measure and record optics 28 volt 800 cps 1% supply voltage on DVM. (SCA input.)

*41. Set CROSSBAR CONTROL to 271.

*42. Set Test Selector panel to 128 and measure and record optics 28 volt 800 cps 1% supply voltage on DVM. (SCA output.)

43. Set CROSSBAR CONTROL on Primary Signal Selector panel to 255 and measure and record PIPA temperature on DVM. (SCA input.)

44. Set CROSSBAR CONTROL to 271.

45. Set Test Selector panel to 201 and measure and record PIPA temperature on DVM. (SCA output.)

*46. Set CROSSBAR CONTROL on Primary Signal Selector panel to 156 and measure and record IRIG temperature on DVM. (SCA input.)

*47. Set CROSSBAR CONTROL to 271.

*48. Set Test Selector panel to 202 and measure and record IRIG temperature on DVM. (SCA output.)

> NOTE: SCM TEST TMC INHIBIT lamp on Temperature Monitor Control panel will light whenever PIPA or IRIG temperature monitor is selected (steps 43 through 48). Ignore lamp indication.

*49. Set CROSSBAR CONTROL on Primary Signal Selector panel to 299.

*50. Connect PSA TPA direct probes to TB4-21 (high) and TB5-22 (low) and measure and record IMU heater current on DVM. (SCA input.)

*51. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271.

*52. Set Test Selector panel to 150 and measure and record IMU heater current on DVM. (SCA output.)

*53. Set CROSSBAR CONTROL on Primary Signal Selector panel to 299.

> NOTE: An indication may or may not be present during performance of steps 54 and 56 depending upon blower cycling.

*54. Connect PSA TPA direct probes to TB4-20 (high) and TB5-33 (low) and measure and record IMU blower current on DVM. (SCA input.)

*55. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271.

*56. Set Test Selector panel to 151 and measure and record IMU blower current on DVM. (SCA output.)

IG, MG, AND OG SERVO ERRORS

57. Perform following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. Observe:
VERB 21 NOUN 22 Flashing
d. +00000 ENTR
e. Observe:
VERB 22 NOUN 22 Flashing
f. +00000 ENTR
g. Observe:
VERB 23 NOUN 22 Flashing
h. +00000 ENTR

58. Set switches on Signal Generator as follows:

RANGE to X 0.1
FREQUENCY meter to 2
FUNCTION to SQUARE
DC BALANCE to mid position
AMPLITUDE TO 70

59. Perform following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

60. Set FUNCTION control on PAVM to 0° and FREQUENCY control to 3200 ~.

61. Press to light GIMBAL SERVO TEST pushbutton on Test Selector panel.

62. Set CROSSBAR CONTROL on Primary Signal Selector panel to 135 to monitor IG servo error on PAVM.

63. Connect decade inductance to PSA TPA test points TB5-32 (high) and TB5-40 (low).

64. Set GIMBAL SERVO TEST switch on Test Selector panel to 1.

65. Set Test Selector panel to 137.

66. Press to light TEST START pushbutton.

67. Set SCOPE "A" INPUT SIGNAL switch on Primary Signal Selector panel to SIG 1 and SCOPE "A" INPUT REFERENCE switch to 3.

68. Monitor lissajous pattern on Oscilloscope and adjust decade inductance until lissajous pattern indicates minimum phase shift.

69. Measure and record both right and left maximum meter deflection of PAVM. Add the absolute values and record result as maximum meter spread. (SCA input.)

70. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and measure and record both high and low

---

voltage indications on DVM. Subtract low voltage from high voltage and record result as maximum meter spread. (SCA output.)

71. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

72. Calculate IG servo error SCA output to IG servo error SCA input as follows.

Record result:

$$\text{IG servo error} = \frac{\text{Step 70, max meter spread}}{\text{Step 69, max meter spread}} = 0.91\ (\pm 15\%)$$

73. Set CROSSBAR CONTROL on Primary Signal Selector panel to 134 to monitor MG servo error on PAVM.

74. Connect decade inductance to PSA TPA test points TB5-41 (high) and TB5-40 (low).

75. Set GIMBAL SERVO TEST switch on Test Selector panel to 2.

76. Set Test Selector panel to 138.

77. Press to light TEST START pushbutton.

78. Monitor lissajous pattern on Oscilloscope and adjust decade inductance until lissajous pattern indicates minimum phase shift.

79. Measure and record both right and left maximum meter deflection of PAVM. Add the absolute values and record result as maximum meter spread. (SCA input.)

80. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and measure and record both high and low voltage indications on DVM. Subtract low voltage from high voltage and record result as maximum meter spread. (SCA output.)

81. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

82. Calculate MG servo error SCA output to MG servo error SCA input as follows.

Record result:

$$\text{MG servo error} = \frac{\text{Step 80, max meter spread}}{\text{Step 79, max meter spread}} = 0.91\ (\pm 15\%)$$

83. Set CROSSBAR CONTROL on Primary Signal Selector panel to 133 to monitor OG servo error on PAVM.

84. Connect decade inductance to PSA TPA test points TB5-31 (high) and TB5-40 (low).

85. Set GIMBAL SERVO TEST switch on Test Selector panel to 3.

86. Set Test Selector panel to 139.

87. Press to light TEST START pushbutton.

88. Monitor lissajous pattern on Oscilloscope and adjust decade inductance until lissajous pattern indicates minimum phase shift.

---

89. Measure and record both right and left maximum meter deflection of PAVM. Add the absolute values and record result as maximum meter spread. (SCA input.)

90. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and measure and record both high and low voltage indications on DVM. Subtract low voltage from high voltage and record result as maximum meter spread. (SCA output.)

91. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

92. Calculate OG servo error SCA output to OG servo error SCA input as follows.

Record result:

$$\text{OG servo error} = \frac{\text{Step 90, max meter spread}}{\text{Step 89, max meter spread}} = 0.91\ (\pm 15\%)$$

93. Press to extinguish GIMBAL SERVO TEST pushbutton on Test Selector panel.

IG, MG, AND OG TORQUE MOTOR CURRENTS

*94. Insure that AMPLITUDE control on Signal Generator is set to 0.

*95. Connect jumper between PROBES OUTPUT DIRECT jacks and CH6DC IN jacks on Auxiliary Input panel.

*96. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to 15.

*97. Insure that CH6DC indicator is lighted.

*98. Zero Oscillograph channel 6 and set sensitivity to 0.1 V/CM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 trace as near center as possible with a 2.5 vdc bias input.

*99. Set FREQUENCY meter on Signal Generator to 1 and RANGE switch to X1.

*100. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*101. Set CROSSBAR CONTROL on Primary Signal Selector panel to 176 to monitor Signal Generator output on Oscilloscope.

*102. Press to light GIMBAL SERVO TEST pushbutton on Test Selector panel.

*103. Connect PSA TPA direct probes to TB2-31 (high) and TB1-49 (low) to monitor IG torque motor current on channel 6. (SCA input.)

*104. Set Test Selector panel to 132 and GIMBAL SERVO TEST switch to 1 to monitor IG torque motor current on channel 8. (SCA output.)

*105. Press to light TEST START pushbutton.

*106. Increase Signal Generator AMPLITUDE control until Oscilloscope indicates 2 volts peak-to-peak. Maintain Signal Generator AMPLITUDE control setting for approximately 10 seconds, then set AMPLITUDE control to 0.

*107. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

*108. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR. Measure and record peak-to-peak SCA input signal monitored on channel 6 and peak-to-peak SCA output signal monitored on channel 8.

*109. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*110. Connect PSA TPA direct probes to TB2-32 (high) and TB1-49 (low) to monitor MG torque motor current on channel 6. (SCA input.)

*111. Press to light TEST START pushbutton.

*112. Increase Signal Generator AMPLITUDE control until Oscilloscope indicates 1 volt peak-to-peak. Maintain Signal Generator AMPLITUDE control setting for approximately 10 seconds, then set AMPLITUDE control to 0.

*113. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

*114. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR. Measure and record peak-to-peak SCA input signal monitored on channel 6 and peak-to-peak SCA output signal monitored on channel 8.

*115. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*116. Connect PSA TPA direct probes to TB1-45 (high) and TB1-49 (low) to monitor OG torque motor current on channel 6. (SCA input.)

*117. Press to light TEST START pushbutton.

*118. Increase Signal Generator AMPLITUDE control until Oscilloscope indicates 1 volt peak-to-peak. Maintain Signal Generator AMPLITUDE control setting for approximately 10 seconds, then set AMPLITUDE control to 0.

*119. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

*120. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR. Measure and record peak-to-peak SCA input signal monitored on channel 6 and peak-to-peak SCA output signal monitored on channel 8.

*121. Set GIMBAL SERVO TEST switch on Test Selector panel to OFF. Set CHART DRIVE switch on Oscillograph Control panel to OFF and set sensitivities on Oscillograph Amplifiers to OFF.

1X RESOLVER SIN AND COS

122. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe:
VERB 21 NOUN 22 Flashing
c. +04500 ENTR
d. Observe:
VERB 22 NOUN 22 Flashing
e. +04500 ENTR
f. Observe:
VERB 23 NOUN 22 Flashing
g. +04500 ENTR

---

123. Set CROSSBAR CONTROL on Primary Signal Selector panel to 243 and measure and record IG 1X resolver cos voltage indicated on DVM. (SCA input.)

124. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and set Test Selector panel to 120. Measure and record IG 1X resolver cos voltage indicated on DVM. (SCA output.)

125. Calculate SCA output IG 1X resolver cos to SCA input IG 1X resolver cos as follows. Record result:

IG 1X resolver cos =

$$\frac{8.1\ (\text{Step 124 - Step 33})}{\text{Step 123}} = 1\ (\pm 10\%)$$

126. Set Test Selector panel to 121 and measure and record MG 1X resolver cos voltage indicated on DVM. (SCA output.)

127. Set CROSSBAR CONTROL on Primary Signal Selector panel to 242 and measure and record MG 1X resolver cos voltage indicated on DVM. (SCA input.)

128. Calculate SCA output MG 1X resolver cos to SCA input MG 1X resolver cos as follows. Record result:

MG 1X resolver cos =

$$\frac{8.1\ (\text{Step 126 - Step 33})}{\text{Step 127}} = 1\ (\pm 10\%)$$

129. Set CROSSBAR CONTROL on Primary Signal Selector panel to 241 and measure and record OG 1X resolver cos voltage indicated on DVM. (SCA input.)

130. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and set Test Selector panel to 122. Measure and record OG 1X resolver cos voltage indicated on DVM. (SCA output.)

131. Calculate SCA output OG 1X resolver cos to SCA input OG 1X resolver cos as follows. Record result:

OG 1X resolver cos =

$$\frac{8.1\ (\text{Step 130 - Step 33})}{\text{Step 129}} = 1\ (\pm 10\%)$$

132. Set Test Selector panel to 123 and measure and record IG 1X resolver sin voltage indicated on DVM. (SCA output.)

133. Set CROSSBAR CONTROL on Primary Signal Selector panel to 144 and measure and record IG 1X resolver sin voltage indicated on DVM. (SCA input.)

134. Calculate SCA output IG 1X resolver sin to SCA input IG 1X resolver sin as follows. Record result:

IG 1X resolver sin =

$$\frac{8.1\ (\text{Step 132 - Step 33})}{\text{Step 133}} = 1\ (\pm 10\%)$$

135. Set CROSSBAR CONTROL on Primary Signal Selector panel to 143 and measure and record MG 1X resolver sin voltage indicated on DVM. (SCA input.)

136. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and set Test Selector panel to 124. Measure and record MG 1X resolver sin voltage indicated on DVM. (SCA output.)

---

137. Calculate SCA output MG 1X resolver sin to SCA input MG 1X resolver sin as follows. Record result:

MG 1X resolver sin =

$$\frac{8.1\ (\text{Step 136 - Step 33})}{\text{Step 135}} = 1\ (\pm 10\%)$$

138. Set Test Selector panel to 125 and measure and record OG 1X resolver sin voltage indicated on DVM. (SCA output.)

139. Set CROSSBAR CONTROL on Primary Signal Selector panel to 142 and measure and record OG 1X resolver sin voltage indicated on DVM (SCA input.)

140. Calculate SCA output OG 1X resolver sin to SCA input OG 1X resolver sin as follows. Record result:

OG 1X resolver sin =

$$\frac{8.1\ (\text{Step 138 - Step 33})}{\text{Step 139}} = 1\ (\pm 10\%)$$

*162. Set Test Selector panel to 126 and measure and record SCA trunnion CDU DAC output indicated on DVM.

*163. Set Test Selector panel to 127 and measure and record SCA shaft CDU DAC output indicated on DVM.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

*164. Set Test Selector panel to 129.

*165. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCA GDB stepper switch

*166. Zero Oscillograph channel 1 and set sensitivity to 20 MV/MM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

*167. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

*168. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS ZERO switch (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

*169. Hold Optics Hand Controller to left limit not longer than 20 seconds.

*170. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT shaft tach input and output signals monitored on channels 1 and 8.

*171. Set Test Selector panel to 148 to connect SCA SCT shaft tach output to Oscillograph channel 8.

*172. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to connect SCA SCT shaft tach input to channel 1.

*173. Zero Oscillograph channel 1 and set sensitivity to 200 MV/MM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

*174. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*175. Set OPTICS SPEED switch on Indicator Control panel to HI.

*176. Hold Optics Hand Controller to right limit for approximately 20 seconds.

*177. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT shaft tach input and output signals monitored on channels 1 and 8.

*178. Set Test Selector panel to 130 to connect SCA SXT trunnion tach output to Oscillograph channel 8.

*179. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 to connect SCA SXT trunnion tach input to Oscillograph channel 2.

*180. Zero Oscillograph channel 2 and set sensitivity to 20 MV/MM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

*181. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*182. Set OPTICS SPEED switch on Indicator Control panel to MED.

*183. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

---

*184. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT trunnion tach input and output signals monitored on channels 2 and 8.

*185. Set Test Selector panel to 149 to connect SCA SCT trunnion tach output to Oscillograph channel 8.

*186. Set CHANNEL 5 switch on Oscillograph Signal Selector panel to 11 to connect SCA SCT trunnion tach input to Oscillograph channel 5.

*187. Insure that CH5AC indicator on Oscillograph Signal Selector panel is lighted.

*188. Zero Oscillograph channel 5 and set sensitivity to 50 MV/MM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

*189. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*190. Set OPTICS SPEED switch on Indicator Control panel to HI.

*191. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

*192. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set sensitivities on Oscillograph Amplifiers to OFF. Record SCA SCT trunnion tach input and output signals monitored on channels 5 and 8.

YAW, PITCH, AND ROLL ATTITUDE ERRORS

*193. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR

g. +01600 ENTR

*195. Connect jumper between PROBES OUTPUT DIRECT jacks and PAVM IN jacks on Auxiliary Input panel. Set PAVM switch on Primary Signal Selector panel to AUX.

---

*196. Connect PSA TPA direct probes to TB4-44 (high) and TB4-48 (low) and measure and record SCA yaw attitude error input indicated on PAVM.

*197. Set Test Selector panel to 114 and measure and record SCA yaw attitude error output indicated on DVM.

*198. Calculate SCA yaw attitude error output to SCA yaw attitude error input as follows. Record result:

Yaw attitude error =

$$\frac{2.44\ (\text{Step 197 - Step 33})}{\text{Step 196}} = 1\ (\pm 10\%)$$

*199. Connect PSA TPA direct probes to TB4-45 (high) and TB4-49 (low) and measure and record SCA pitch attitude error input indicated on PAVM.

*200. Set Test Selector panel to 115 and measure and record SCA pitch attitude error output indicated on DVM.

*201. Calculate SCA pitch attitude error output to SCA pitch attitude error input as follows. Record result:

Pitch attitude error =

$$\frac{2.44\ (\text{Step 200 - Step 33})}{\text{Step 199}} = 1\ (\pm 10\%)$$

*202. Connect PSA TPA direct probes to TB4-43 (high) and TB4-47 (low) and measure and record SCA roll attitude error input indicated on PAVM.

*203. Set Test Selector panel to 116 and measure and record SCA roll attitude error output indicated on DVM.

*204. Calculate SCA roll attitude error output to SCA roll attitude error input as follows. Record result:

Roll attitude error =

$$\frac{2.44\ (\text{Step 203 - Step 33})}{\text{Step 202}} = 1\ (\pm 10\%)$$

205. Perform JDC 12204 to turn off G & N system.

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV. L PAGE 1 OF 15

INITIAL TDRR 32758 D.S. PGS 9

SUBSYSTEM G & N SYSTEM

ASSY.

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Assembly. Functional operation is evaluated by checking Signal Conditioner Assembly input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G & N test configuration for maximum checkout capability.

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL Decade Inductance, General Radio 1490F or equivalent

IMPORTANT: 1. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

2. Insure that cable W226 is removed and connector assembly (2003099) is connected to CGC test connector before proceeding with this JDC.

NOTE: The items marked with an asterisk (*) are applicable only for SCA P/N 2007035 and are to be omitted for SCA P/N 2007234.

NOTE: Do not command zero optics from a trunnion angle greater than 10°.

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

2. Position SCA in cutout above DSKY on right side of cradle front panel assembly with SCA connectors facing bracket assembly, P/N 2900919, and attach with six captive screws. Torque screws finger tight.

3. Position SCA Deutsch connectors J1, J2, and J3 in bracket assembly (observe placarding on bracket assembly for connector locations) and attach with hex nuts

VERIFICATION WITH SIDL REQUIRED BEFORE USE

supplied with each connector. Torque hex nuts finger tight.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

4. Connect GNF harness connectors P7, P8, and P9 to SCA connectors J2, J1, and J3, respectively.

5. Perform JDC 12204 to advance system to ISS Operate mode.

6. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173.

7. Adjust G&N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28.8 (± 0.25) vdc.

8. Press to light OPTICS POWER ON pushbutton on Test Control panel.

9. Perform following switch settings on applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set -
   (1) OPTICS ZERO to OFF then to ZERO
   (2) OPTICS TEL TRUN to SLAVE TO SXT
   (3) OPTICS COUPLING to DIRECT
   (4) OPTICS MODE to MAN
   (5) OPTICS SPEED to LO

b. On all Indicator Control panels except 2021290 set -
   (1) OPTICS MODE to MAN then to ZERO
   (2) OPTICS CONTROLLER SPEED to LO
   (3) OPTICS CONTROLLER COUPLING to DIRECT
   (4) OPTICS TRACKER to OFF
   (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCA GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 271.

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit of Test Selector panel position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last last two digits of Test Selector panel position.

2. Set Test Selector panel to 101 and measure and record 28 vdc CGC operate voltage on DVM. (SCA output.)

3. Set Test Selector panel to 102 and measure and record 28 vdc IMU standby voltage on DVM. (SCA output.)

4. Set Test Selector panel to 203 and measure and record 28 vdc optics operate voltage on DVM. (SCA output.)

CMC WARNING

5. Set Test Selector panel to 204 to monitor +28 vdc CMC warning voltage on DVM.

6. Enter VERB 35 into DSKY and press ENTR pushbutton.

7. Record that CMC lamp on Indicator Control panel lights and then goes out. Record DVM indication after CMC lamp goes out. (SCA otuput.)

PIPA G/S OUTPUT

8. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA G/S output
CHANNEL 5 to 1	Y PIPA G/S output
CHANNEL 6 to 1	X PIPA G/S output
CHANNEL 8 to 4	SCA GDB stepper switch

9. Insure that CH4AC, CH5AC, and CH6AC pushbuttons on Oscillograph Signal Selector panel are lighted.

10. Set sensitivities on Oscillograph Amplifiers for channels 4, 5, and 6 to 500 MV/MM and set sensitivity of channel 8 to 5 V/CM. Use ZERO ADJ control to center all traces.

11. Perform following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. Observe:
   VERB 21 NOUN 22 Flashing
d. +00000 ENTR
e. Observe:
   VERB 22 NOUN 22 Flashing
f. -04500 ENTR
g. Observe:
   VERB 23 NOUN 22 Flashing
h. +03500 ENTR

12. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel.

13. Set Test Selector panel to 117 to monitor Z PIPA G/S in-phase output on channels 4 and 8.

14. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Ignore all lamp indications which occur during performance of step 15.

15. Enter VERB 35 into DSKY and press ENTR pushbutton.

16. Observe channel 8 for indication of PIPA loop opening for approximately 30 seconds and then closing.

17. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record Z PIPA loop closure test results as satisfactory if loop closure indication on channel 8 (SCA output) corresponds to loop closure indication on channel 4 (SCA input).

18. Set Test Selector panel to 118 to monitor Y PIPA G/S in-phase output on channels 5 and 8.

19. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Ignore all lamp indications which occur during performance of step 20.

20. Enter VERB 35 into DSKY and press ENTR pushbutton.

21. Observe channel 8 for indication of PIPA loop opening for approximately 30 seconds and then closing.

22. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record Y PIPA loop closure test results as satisfactory if loop closure indication on channel 8 (SCA output) corresponds to loop closure indication on channel 5 (SCA input).

23. Set Test Selector panel to 119 to monitor X PIPA G/S in-phase output on channels 6 and 8.

24. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Ignore all lamp indications which occur during performance of step 25.

25. Enter VERB 35 into DSKY and press ENTR pushbutton.

26. Observe channel 8 for indication of PIPA loop opening for approximately 30 seconds and then closing.

27. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record X PIPA loop closure test results as satisfactory if loop closure indication on Channel 8 (SCA output) corresponds to loop closure indication on channel 6 (SCA input).

28. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe:
   VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe:
   VERB 22 NOUN 22 Flashing
e. -22500 ENTR
f. Observe:
   VERB 23 NOUN 22 Flashing
g. -03500 ENTR

29. Repeat steps 13 through 27 and then set all Oscillograph Amplifier sensitivities to OFF.

POWER SUPPLY AND TEMPERATURE

30. Set CROSSBAR CONTROL on Primary Signal Selector panel to 259 and measure and record 120 vdc PIPA supply voltage on DVM. (SCA input.)

31. Set CROSSBAR CONTROL to 271.

32. Set Test Selector panel to 103 and measure and record 120 vdc PIPA supply voltage on DVM. (SCA output.)

33. Set Test Selector panel to 104 and measure and record 2.5 vdc TM bias voltage on DVM.

34. Set CROSSBAR CONTROL on Primary Signal Selector panel to 123 and measure and record 28 volt 3200 cps supply voltage on DVM. (SCA input.)

35. Set CROSSBAR CONTROL to 271.

36. Set Test Selector panel to 106 and measure and record 28 volt 3200 cps supply voltage on DVM. (SCA output.)

37. Set CROSSBAR CONTROL on Primary Signal Selector panel to 121 and measure and record IMU 28 volt 800 cps 1% supply voltage on DVM. (SCA input.)

38. Set CROSSBAR CONTROL to 271.

39. Set Test Selector panel to 113 and measure and record IMU 28 volt 800 cps 1% supply voltage on DVM. (SCA output.)

*40. Set CROSSBAR CONTROL on Primary Signal Selector panel to 101 and measure and record optics 28 volt 800 cps 1% supply voltage on DVM. (SCA input.)

*41. Set CROSSBAR CONTROL to 271.

*42. Set Test Selector panel to 128 and measure and record optics 28 volt 800 cps 1% supply voltage on DVM. (SCA output.)

43. Set CROSSBAR CONTROL on Primary Signal Selector panel to 255 and measure and record PIPA temperature on DVM. (SCA input.)

44. Set CROSSBAR CONTROL to 271.

45. Set Test Selector panel to 201 and measure and record PIPA temperature on DVM. (SCA output.)

*46. Set CROSSBAR CONTROL on Primary Signal Selector panel to 156 and measure and record IRIG temperature on DVM. (SCA input.)

*47. Set CROSSBAR CONTROL to 271.

*48. Set Test Selector panel to 202 and measure and record IRIG temperature on DVM. (SCA output.)

NOTE: SCM TEST TMC INHIBIT lamp on Temperature Monitor Control panel will light whenever PIPA or IRIG temperature monitor is selected (steps 43 through 48). Ignore lamp indication.

*49. Set CROSSBAR CONTROL on Primary Signal Selector panel to 299.

*50. Connect PSA TPA direct probes to TB4-21 (high) and TB5-22 (low) and measure and record IMU heater current on DVM. (SCA input.)

*51. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271.

*52. Set Test Selector panel to 150 and measure and record IMU heater current on DVM. (SCA output.)

*53. Set CROSSBAR CONTROL on Primary Signal Selector panel to 299.

NOTE: An indication may or may not be present during performance of steps 54 and 56 depending upon blower cycling.

*54. Connect PSA TPA direct probes to TB4-20 (high) and TB5-33 (low) and measure and record IMU blower current on DVM. (SCA input.)

*55. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271.

*56. Set Test Selector panel to 151 and measure and record IMU blower current on DVM. (SCA output.)

IG, MG, AND OG SERVO ERRORS

57. Perform following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. Observe:
VERB 21 NOUN 22 Flashing
d. +00000 ENTR
e. Observe:
VERB 22 NOUN 22 Flashing
f. +00000 ENTR
g. Observe:
VERB 23 NOUN 22 Flashing
h. +00000 ENTR

58. Set switches on Signal Generator as follows:

RANGE to X 0.1
FREQUENCY meter to 2
FUNCTION to SQUARE
DC BALANCE to mid position
AMPLITUDE TO 70

59. Perform following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

60. Set FUNCTION control on PAVM to 0° and FREQUENCY control to 3200 ~.

61. Press to light GIMBAL SERVO TEST pushbutton on Test Selector panel.

62. Set CROSSBAR CONTROL on Primary Signal Selector panel to 135 to monitor IG servo error on PAVM.

63. Connect decade inductance to PSA TPA test points TB5-32 (high) and TB5-40 (low).

64. Set GIMBAL SERVO TEST switch on Test Selector panel to 1.

65. Set Test Selector panel to 137.

66. Press to light TEST START pushbutton.

67. Set SCOPE "A" INPUT SIGNAL switch on Primary Signal Selector panel to SIG 1 and SCOPE "A" INPUT REFERENCE switch to 3.

68. Monitor lissajous pattern on Oscilloscope and adjust decade inductance until lissajous pattern indicates minimum phase shift.

69. Measure and record both right and left maximum meter deflection of PAVM. Add the absolute values and record result as maximum meter spread. (SCA input.)

70. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and measure and record both high and low

---

voltage indications on DVM. Subtract low voltage from high voltage and record result as maximum meter spread. (SCA output.)

71. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

72. Calculate IG servo error SCA output to IG servo error SCA input as follows. Record result:

IG servo error =

$$\frac{\text{Step 70, max meter spread}}{\text{Step 69, max meter spread}} = 0.91\ (\pm 15\%)$$

73. Set CROSSBAR CONTROL on Primary Signal Selector panel to 134 to monitor MG servo error on PAVM.

74. Connect decade inductance to PSA TPA test points TB5-41 (high) and TB5-40 (low).

75. Set GIMBAL SERVO TEST switch on Test Selector panel to 2.

76. Set Test Selector panel to 138.

77. Press to light TEST START pushbutton.

78. Monitor lissajous pattern on Oscilloscope and adjust decade inductance until lissajous pattern indicates minimum phase shift.

79. Measure and record both right and left maximum meter deflection of PAVM. Add the absolute values and record result as maximum meter spread. (SCA input.)

80. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and measure and record both high and low voltage indications on DVM. Subtract low voltage from high voltage and record result as maximum meter spread. (SCA output.)

81. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

82. Calculate MG servo error SCA output to MG servo error SCA input as follows. Record result:

MG servo error =

$$\frac{\text{Step 80, max meter spread}}{\text{Step 79, max meter spread}} = 0.91\ (\pm 15\%)$$

83. Set CROSSBAR CONTROL on Primary Signal Selector panel to 133 to monitor OG servo error on PAVM.

84. Connect decade inductance to PSA TPA test points TB5-31 (high) and TB5-40 (low).

85. Set GIMBAL SERVO TEST switch on Test Selector panel to 3.

86. Set Test Selector panel to 139.

87. Press to light TEST START pushbutton.

88. Monitor lissajous pattern on Oscilloscope and adjust decade inductance until lissajous pattern indicates minimum phase shift.

---

89. Measure and record both right and left maximum meter deflection of PAVM. Add the absolute values and record result as maximum meter spread. (SCA input.)

90. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and measure and record both high and low voltage indications on DVM. Subtract low voltage from high voltage and record result as maximum meter spread. (SCA output.)

91. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

92. Calculate OG servo error SCA output to OG servo error SCA input as follows. Record result:

OG servo error =

$$\frac{\text{Step 90, max meter spread}}{\text{Step 89, max meter spread}} = 0.91\ (\pm 15\%)$$

93. Press to extinguish GIMBAL SERVO TEST pushbutton on Test Selector panel.

IG, MG, AND OG TORQUE MOTOR CURRENTS

*94. Insure that AMPLITUDE control on Signal Generator is set to 0.

*95. Connect jumper between PROBES OUTPUT DIRECT jacks and CH6DC IN jacks on Auxiliary Input panel.

*96. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to 15.

*97. Insure that CH6DC indicator is lighted.

*98. Zero Oscillograph channel 6 and set sensitivity to 0.1 V/CM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 trace as near center as possible with a 2.5 vdc bias input.

*99. Set FREQUENCY meter on Signal Generator to 1 and RANGE switch to X1.

*100. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*101. Set CROSSBAR CONTROL on Primary Signal Selector panel to 176 to monitor Signal Generator output on Oscilloscope.

*102. Press to light GIMBAL SERVO TEST pushbutton on Test Selector panel.

*103. Connect PSA TPA direct probes to TB2-31 (high) and TB1-49 (low) to monitor IG torque motor current on channel 6. (SCA input.)

*104. Set Test Selector panel to 132 and GIMBAL SERVO TEST switch to 1 to monitor IG torque motor current on channel 8. (SCA output.)

*105. Press to light TEST START pushbutton.

*106. Increase Signal Generator AMPLITUDE control until Oscilloscope indicates 2 volts peak-to-peak. Maintain Signal Generator AMPLITUDE control setting for approximately 10 seconds, then set AMPLITUDE control to 0.

*107. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

*108. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR. Measure and record peak-to-peak SCA input signal monitored on channel 6 and peak-to-peak SCA output signal monitored on channel 8.

*109. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*110. Connect PSA TPA direct probes to TB2-32 (high) and TB1-49 (low) to monitor MG torque motor current on channel 6. (SCA input.)

*111. Press to light TEST START pushbutton.

*112. Increase Signal Generator AMPLITUDE control until Oscilloscope indicates 1 volt peak-to-peak. Maintain Signal Generator AMPLITUDE control setting for approximately 10 seconds, then set AMPLITUDE control to 0.

*113. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

*114. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR. Measure and record peak-to-peak SCA input signal monitored on channel 6 and peak-to-peak SCA output signal monitored on channel 8.

*115. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*116. Connect PSA TPA direct probes to TB1-45 (high) and TB1-49 (low) to monitor OG torque motor current on channel 6. (SCA input.)

*117. Press to light TEST START pushbutton.

*118. Increase Signal Generator AMPLITUDE control until Oscilloscope indicates 1 volt peak-to-peak. Maintain Signal Generator AMPLITUDE control setting for approximately 10 seconds, then set AMPLITUDE control to 0.

*119. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

*120. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR. Measure and record peak-to-peak SCA input signal monitored on channel 6 and peak-to-peak SCA output signal monitored on channel 8.

*121. Set GIMBAL SERVO TEST switch on Test Selector panel to OFF. Set CHART DRIVE switch on Oscillograph Control panel to OFF and set sensitivities on Oscillograph Amplifiers to OFF.

1X RESOLVER SIN AND COS

122. Perform following DSKY operations:
a. VERB 41 NOUN 20 ENTR
b. Observe:
VERB 21 NOUN 22 Flashing
c. +04500 ENTR
d. Observe:
VERB 22 NOUN 22 Flashing
e. +04500 ENTR
f. Observe:
VERB 23 NOUN 22 Flashing
g. +04500 ENTR

---

123. Set CROSSBAR CONTROL on Primary Signal Selector panel to 243 and measure and record IG 1X resolver cos voltage indicated on DVM. (SCA input.)

124. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 amd set Test Selector panel to 120. Measure and record IG 1X resolver cos voltage indicated on DVM. (SCA output.)

125. Calculate SCA output IG 1X resolver cos to SCA input IG 1X resolver cos as follows. Record result:

IG 1X resolver cos =

$$\frac{8.1\ (\text{Step 124} - \text{Step 33})}{\text{Step 123}} = 1\ (\pm 10\%)$$

126. Set Test Selector panel to 121 and measure and record MG 1X resolver cos voltage indicated on DVM. (SCA output.)

127. Set CROSSBAR CONTROL on Primary Signal Selector panel to 242 and measure and record MG 1X resolver cos voltage indicated on DVM. (SCA input.)

128. Calculate SCA output MG 1X resolver cos to SCA input MG 1X resolver cos as follows. Record result:

MG 1X resolver cos =

$$\frac{8.1\ (\text{Step 126} - \text{Step 33})}{\text{Step 127}} = 1\ (\pm 10\%)$$

129. Set CROSSBAR CONTROL on Primary Signal Selector panel to 241 and measure and record OG 1X resolver cos voltage indicated on DVM. (SCA input.)

130. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and set Test Selector panel to 122. Measure and record OG 1X resolver cos voltage indicated on DVM. (SCA output.)

131. Calculate SCA output OG 1X resolver cos to SCA input OG 1X resolver cos as follows. Record result:

OG 1X resolver cos =

$$\frac{8.1\ (\text{Step 130} - \text{Step 33})}{\text{Step 129}} = 1\ (\pm 10\%)$$

132. Set Test Selector panel to 123 and measure and record IG 1X resolver sin voltage indicated on DVM. (SCA output.)

133. Set CROSSBAR CONTROL on Primary Signal Selector panel to 144 and measure and record IG 1X resolver sin voltage indicated on DVM. (SCA input.)

134. Calculate SCA output IG 1X resolver sin to SCA input IG 1X resolver sin as follows. Record result:

IG 1X resolver sin =

$$\frac{8.1\ (\text{Step 132} - \text{Step 33})}{\text{Step 133}} = 1\ (\pm 10\%)$$

135. Set CROSSBAR CONTROL on Primary Signal Selector panel to 143 and measure and record MG 1X resolver sin voltage indicated on DVM. (SCA input.)

136. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and set Test Selector panel to 124. Measure and record MG 1X resolver sin voltage indicated on DVM. (SCA output.)

---

137. Calculate SCA output MG 1X resolver sin to SCA input MG 1X resolver sin as follows. Record result:

MG 1X resolver sin =

$$\frac{8.1\ (\text{Step 136} - \text{Step 33})}{\text{Step 135}} = 1\ (\pm 10\%)$$

138. Set Test Selector panel to 125 and measure and record OG 1X resolver sin voltage indicated on DVM. (SCA output.)

139. Set CROSSBAR CONTROL on Primary Signal Selector panel to 142 and measure and record OG 1X resolver sin voltage indicated on DVM (SCA input.)

140. Calculate SCA output OG 1X resolver sin to SCA input OG 1X resolver sin as follows. Record result:

OG 1X resolver sin =

$$\frac{8.1\ (\text{Step 138} - \text{Step 33})}{\text{Step 139}} = 1\ (\pm 10\%)$$

141. Perform following DSKY operations:

SHAFT AND TRUNNION CDU FINE ERROR

*142. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

*143. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271.

*144. Set Test Selector panel to 146 to connect SCA shaft CDU fine error output to DVM.

*145. Connect jumper between PROBES OUTPUT BUFFERED jacks and PAVM IN jacks on Auxiliary Input panel.

*146. Set PAVM switch on Primary Signal Selector panel to AUX.

*147. Connect PSA TPA buffered probes to TB3-23 (high) and TB3-34 (low) to connect SCA shaft CDU fine error input to PAVM.

*148. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

*149. Perform following DSKY operations:
a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00011 ENTR

*150. Position Optics Hand Controller on Indicator Control panel to the left until PAVM indicates 1.0 vac in-phase. Record SCA output indicated on DVM.

*151. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290, set OPTICS MODE switch to ZERO.

*152. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

*153. Set Test Selector panel to 147 to connect SCA trunnion CDU fine error output to DVM.

---

*154. Connect PSA TPA buffered probes to TB3-22 (high) and TB3-34 (low) to connect SCA trunnion CDU fine error input to PAVM.

*155. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

*156. Perform following DSKY operations:
a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00011 ENTR

*157. Position Optics Hand Controller on Indicator Control panel to a down position until PAVM indicates 0.64 vac in-phase. Record SCA output indicated on DVM.

*162. Set Test Selector panel to 126 and measure and record SCA trunnion CDU DAC output indicated on DVM.

*163. Set Test Selector panel to 127 and measure and record SCA shaft CDU DAC output indicated on DVM.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

*164. Set Test Selector panel to 129.

*165. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCA GDB stepper switch

*166. Zero Oscillograph channel 1 and set sensitivity to 20 MV/MM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

*167. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

*168. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS ZERO switch (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

*169. Hold Optics Hand Controller to left limit not longer than 20 seconds.

*170. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT shaft tach input and output signals monitored on channels 1 and 8.

*171. Set Test Selector panel to 148 to connect SCA SCT shaft tach output to Oscillograph channel 8.

*172. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to connect SCA SCT shaft tach input to channel 1.

*173. Zero Oscillograph channel 1 and set sensitivity to 200 MV/MM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

*174. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*175. Set OPTICS SPEED switch on Indicator Control panel to HI.

*176. Hold Optics Hand Controller to right limit for approximately 20 seconds.

*177. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT shaft tach input and output signals monitored on channels 1 and 8.

*178. Set Test Selector panel to 130 to connect SCA SXT trunnion tach output to Oscillograph channel 8.

*179. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 to connect SCA SXT trunnion tach input to Oscillograph channel 2.

*180. Zero Oscillograph channel 2 and set sensitivity to 20 MV/MM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

*181. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*182. Set OPTICS SPEED switch on Indicator Control panel to MED.

*183. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

---

*184. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT trunnion tach input and output signals monitored on channels 2 and 8.

*185. Set Test Selector panel to 149 to connect SCA SCT trunnion tach output to Oscillograph channel 8.

*186. Set CHANNEL 5 switch on Oscillograph Signal Selector panel to 11 to connect SCA SCT trunnion tach input to Oscillograph channel 5.

*187. Insure that CH5AC indicator on Oscillograph Signal Selector panel is lighted.

*188. Zero Oscillograph channel 5 and set sensitivity to 50 MV/MM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

*189. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*190. Set OPTICS SPEED switch on Indicator Control panel to HI.

*191. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

*192. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set sensitivities on Oscillograph Amplifiers to OFF. Record SCA SCT trunnion tach input and output signals monitored on channels 5 and 8.

YAW, PITCH, AND ROLL ATTITUDE ERRORS

*193. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe:
VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe:
VERB 22 NOUN 22 Flashing

g. +01600 ENTR

*195. Connect jumper between PROBES OUTPUT DIRECT jacks and PAVM IN jacks on Auxiliary Input panel. Set PAVM switch on Primary Signal Selector panel to AUX.

---

*196. Connect PSA TPA direct probes to TB4-44 (high) and TB4-48 (low) and measure and record SCA yaw attitude error input indicated on PAVM.

*197. Set Test Selector panel to 114 and measure and record SCA yaw attitude error output indicated on DVM.

*198. Calculate SCA yaw attitude error output to SCA yaw attitude error input as follows. Record result:

Yaw attitude error =

$$\frac{2.44\ (\text{Step 197} - \text{Step 33})}{\text{Step 196}} = 1\ (\pm 10\%)$$

*199. Connect PSA TPA direct probes to TB4-45 (high) and TB4-49 (low) and measure and record SCA pitch attitude error input indicated on PAVM.

*200. Set Test Selector panel to 115 and measure and record SCA pitch attitude error output indicated on DVM.

*201. Calculate SCA pitch attitude error output to SCA pitch attitude error input as follows. Record result:

Pitch attitude error =

$$\frac{2.44\ (\text{Step 200} - \text{Step 33})}{\text{Step 199}} = 1\ (\pm 10\%)$$

*202. Connect PSA TPA direct probes to TB4-43 (high) and TB4-47 (low) and measure and record SCA roll attitude error input indicated on PAVM.

*203. Set Test Selector panel to 116 and measure and record SCA roll attitude error output indicated on DVM.

*204. Calculate SCA roll attitude error output to SCA roll attitude error input as follows. Record result:

Roll attitude error =

$$\frac{2.44\ (\text{Step 203} - \text{Step 33})}{\text{Step 202}} = 1\ (\pm 10\%)$$

205. Perform JDC 12204 to turn off G & N system.

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT
JDC 12224 REV. M PAGE 1 OF 15
INITIAL TDRR 32758 D.S. PGS 9
SUBSYSTEM G & N SYSTEM
ASSY.

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Assembly. Functional operation is evaluated by checking Signal Conditioner Assembly input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G & N test configuration for maximum checkout capability.

JDC 12204

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL Decade Inductance, General Radio 1490F or equivalent

IMPORTANT: 1. Avoid slewing of SXT shaft and trunnion axes into their mechanical stops.

2. Insure that cable W226 is removed and connector assembly (2003099) or Restart Monitor module (2898989) is connected to CGC test connector before proceeding with this JDC.

NOTE: The items marked with an asterisk (*) are applicable only for SCA P/N 2007035 and are to be omitted for SCA P/N 2007234.

NOTE: Do not command zero optics from a trunnion angle greater than 10°.

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

2. Position SCA in cutout above DSKY on right side of cradle front panel assembly with SCA connectors facing bracket assembly P/N 2900919, and attach with six captive screws. Torque screws finger tight.

3. Position SCA Deutsch connectors J1, J2, and J3 in bracket assembly (observe placarding on bracket assembly for connector locations) and attach with hex nuts

VERIFICATION WITH SIDL REQUIRED BEFORE USE

SUBSYSTEM G & N SYSTEM
ASSY

supplied with each connector. Torque hex nuts finger tight.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

4. Connect GNF harness connectors P7, P8, and P9 to SCA connectors J2, J1, and J3, respectively.

5. Perform JDC 12204 to advance system to ISS Operate mode.

6. Set CROSSBAR CONTROL on Primary Signal Selector panel to 173.

7. Adjust G&N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28.8 (±0.25) vdc.

8. Press to light OPTICS POWER ON pushbutton on Test Control panel.

9. Perform following switch settings on applicable Indicator Control panel:

a. On Indicator Control panel 2021290 only set -
   (1) OPTICS ZERO to OFF then to ZERO
   (2) OPTICS TEL TRUN to SLAVE TO SXT
   (3) OPTICS COUPLING to DIRECT
   (4) OPTICS MODE to MAN
   (5) OPTICS SPEED to LO

b. On all Indicator Control panels except 2021290 set -
   (1) OPTICS MODE to MAN then to ZERO
   (2) OPTICS CONTROLLER SPEED to LO
   (3) OPTICS CONTROLLER COUPLING to DIRECT
   (4) OPTICS TRACKER to OFF
   (5) OPTICS TELESCOPE TRUNNION to SLAVE TO SXT

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCA GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL on Primary Signal Selector panel to 271.

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit of Test Selector panel position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last last two digits of Test Selector panel position.

2. Set Test Selector panel to 101 and measure and record 28 vdc CGC operate voltage on DVM. (SCA output.)

DATE 26 JAN 67

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT
JDC 12224 REV M PAGE 3 OF 15
SUBSYSTEM G & N SYSTEM
ASSY

3. Set Test Selector panel to 102 and measure and record 28 vdc IMU standby voltage on DVM. (SCA output.)

4. Set Test Selector panel to 203 and measure and record 28 vdc optics operate voltage on DVM. (SCA output.)

CMC WARNING

5. Set Test Selector panel to 204 to monitor +28 vdc CMC warning voltage on DVM.

6. Enter VERB 35 into DSKY and press ENTR pushbutton.

7. Record that CMC lamp on Indicator Control panel lights and then goes out. Record DVM indication after CMC lamp goes out. (SCA otuput.)

PIPA G/S OUTPUT

8. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA G/S output
CHANNEL 5 to 1	Y PIPA G/S output
CHANNEL 6 to 1	X PIPA G/S output
CHANNEL 8 to 4	SCA GDB stepper switch

9. Insure that CH4AC, CH5AC, and CH6AC pushbuttons on Oscillograph Signal Selector panel are lighted.

10. Set sensitivities on Oscillograph Amplifiers for channels 4, 5, and 6 to 500 MV/MM and set sensitivity of channel 8 to 5 V/CM. Use ZERO ADJ control to center all traces.

11. Perform following DSKY operations:

a.	VERB 36		ENTR
b.	VERB 41	NOUN 20	ENTR
c.	Observe:		
	VERB 21	NOUN 22	Flashing
d.	+00000		ENTR
e.	Observe:		
	VERB 22	NOUN 22	Flashing
f.	-04500		ENTR
g.	Observe:		
	VERB 23	NOUN 22	Flashing
h.	+03500		ENTR

12. Press CHART SPEEDS 1 pushbutton on Oscillograph Control panel.

13. Set Test Selector panel to 117 to monitor Z PIPA G/S in-phase output on channels 4 and 8.

14. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Ignore all lamp indications which occur during performance of step 15.

15. Enter VERB 35 into DSKY and press ENTR pushbutton.

16. Observe channel 8 for indication of PIPA loop opening for approximately 30 seconds and then closing.

17. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record Z PIPA loop closure test results as satisfactory if loop closure indication on channel 8 (SCA output) corresponds to loop closure indication on channel 4 (SCA input).

DATE 26 JAN 67

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT
JDC 12224 REV M PAGE 4 OF 15
SUBSYSTEM G & N SYSTEM
ASSY

18. Set Test Selector panel to 118 to monitor Y PIPA G/S in-phase output on channels 5 and 8.

19. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Ignore all lamp indications which occur during performance of step 20.

20. Enter VERB 35 into DSKY and press ENTR pushbutton.

21. Observe channel 8 for indication of PIPA loop opening for approximately 30 seconds and then closing.

22. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record Y PIPA loop closure test results as satisfactory if loop closure indication on channel 8 (SCA output) corresponds to loop closure indication on channel 5 (SCA input).

23. Set Test Selector panel to 119 to monitor X PIPA G/S in-phase output on channels 6 and 8.

24. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

NOTE: Ignore all lamp indications which occur during performance of step 25.

25. Enter VERB 35 into DSKY and press ENTR pushbutton.

26. Observe channel 8 for indication of PIPA loop opening for approximately 30 seconds and then closing.

27. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record X PIPA loop closure test results as satisfactory if loop closure indication on Channel 8 (SCA output) corresponds to loop closure indication on channel 6 (SCA input).

28. Perform following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe:		
	VERB 21	NOUN 22	Flashing
c.	+00000		ENTR
d.	Observe:		
	VERB 22	NOUN 22	Flashing
e.	-22500		ENTR
f.	Observe:		
	VERB 23	NOUN 22	Flashing
g.	-03500		ENTR

29. Repeat steps 13 through 27 and then set all Oscillograph Amplifier sensitivities to OFF.

POWER SUPPLY AND TEMPERATURE

30. Set CROSSBAR CONTROL on Primary Signal Selector panel to 259 and measure and record 120 vdc PIPA supply voltage on DVM. (SCA input.)

31. Set CROSSBAR CONTROL to 271.

32. Set Test Selector panel to 103 and measure and record 120 vdc PIPA supply voltage on DVM. (SCA output.)

33. Set Test Selector panel to 104 and measure and record 2.5 vdc TM bias voltage on DVM.

DATE 26 JAN 67

34. Set CROSSBAR CONTROL on Primary Signal Selector panel to 123 and measure and record 28 volt 3200 cps supply voltage on DVM. (SCA input.)

35. Set CROSSBAR CONTROL to 271.

36. Set Test Selector panel to 106 and measure and record 28 volt 3200 cps supply voltage on DVM. (SCA output.)

37. Set CROSSBAR CONTROL on Primary Signal Selector panel to 121 and measure and record IMU 28 volt 800 cps 1% supply voltage on DVM. (SCA input.)

38. Set CROSSBAR CONTROL to 271.

39. Set Test Selector panel to 113 and measure and record IMU 28 volt 800 cps 1% supply voltage on DVM. (SCA output.)

*40. Set CROSSBAR CONTROL on Primary Signal Selector panel to 101 and measure and record optics 28 volt 800 cps 1% supply voltage on DVM. (SCA input.)

*41. Set CROSSBAR CONTROL to 271.

*42. Set Test Selector panel to 128 and measure and record optics 28 volt 800 cps 1% supply voltage on DVM. (SCA output.)

43. Set CROSSBAR CONTROL on Primary Signal Selector panel to 255 and measure and record PIPA temperature on DVM. (SCA input.)

44. Set CROSSBAR CONTROL to 271.

45. Set Test Selector panel to 201 and measure and record PIPA temperature on DVM. (SCA output.)

*46. Set CROSSBAR CONTROL on Primary Signal Selector panel to 156 and measure and record IRIG temperature on DVM. (SCA input.)

*47. Set CROSSBAR CONTROL to 271.

*48. Set Test Selector panel to 202 and measure and record IRIG temperature on DVM. (SCA output.)

NOTE: SCM TEST TMC INHIBIT lamp on Temperature Monitor Control panel will light whenever PIPA or IRIG temperature monitor is selected (steps 43 through 48). Ignore lamp indication.

*49. Set CROSSBAR CONTROL on Primary Signal Selector panel to 299.

*50. Connect PSA TPA direct probes to TB4-21 (high) and TB5-22 (low) and measure and record IMU heater current on DVM. (SCA input.)

*51. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271.

*52. Set Test Selector panel to 150 and measure and record IMU heater current on DVM. (SCA output.)

*53. Set CROSSBAR CONTROL on Primary Signal Selector panel to 299.

NOTE: An indication may or may not be present during performance of steps 54 and 56 depending upon blower cycling.

*54. Connect PSA TPA direct probes to TB4-20 (high) and TB5-33 (low) and measure and record IMU blower current on DVM. (SCA input.)

*55. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271.

*56. Set Test Selector panel to 151 and measure and record IMU blower current on DVM. (SCA output.)

IG, MG, AND OG SERVO ERRORS

57. Perform following DSKY operations:

a. VERB 36 ENTR
b. VERB 41 NOUN 20 ENTR
c. Observe:
VERB 21 NOUN 22 Flashing
d. +00000 ENTR
e. Observe:
VERB 22 NOUN 22 Flashing
f. +00000 ENTR
g. Observe:
VERB 23 NOUN 22 Flashing
h. +00000 ENTR

58. Set switches on Signal Generator as follows:

RANGE to X 0.1
FREQUENCY meter to 2
FUNCTION to SQUARE
DC BALANCE to mid position
AMPLITUDE TO 70

59. Perform following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

60. Set FUNCTION control on PAVM to 0^{o} and FREQUENCY control to 3200 ~.

61. Press to light GIMBAL SERVO TEST pushbutton on Test Selector panel.

62. Set CROSSBAR CONTROL on Primary Signal Selector panel to 135 to monitor IG servo error on PAVM.

63. Connect decade inductance to PSA TPA test points TB5-32 (high) and TB5-40 (low).

64. Set GIMBAL SERVO TEST switch on Test Selector panel to 1.

65. Set Test Selector panel to 137.

66. Press to light TEST START pushbutton.

67. Set SCOPE "A" INPUT SIGNAL switch on Primary Signal Selector panel to SIG 1 and SCOPE "A" INPUT REFERENCE switch to 3.

68. Monitor lissajous pattern on Oscilloscope and adjust decade inductance until lissajous pattern indicates minimum phase shift.

69. Measure and record both right and left maximum meter deflection of PAVM. Add the absolute values and record result as maximum meter spread. (SCA input.)

70. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and measure and record both high and low

---

voltage indications on DVM. Subtract low voltage from high voltage and record result as maximum meter spread. (SCA output.)

71. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

72. Calculate IG servo error SCA output to IG servo error SCA input as follows.

Record result:

IG servo error =

$$\frac{\text{Step 70, max meter spread}}{\text{Step 69, max meter spread}} = 0.91\ (\pm 15\%)$$

73. Set CROSSBAR CONTROL on Primary Signal Selector panel to 134 to monitor MG servo error on PAVM.

74. Connect decade inductance to PSA TPA test points TB5-41 (high) and TB5-40 (low).

75. Set GIMBAL SERVO TEST switch on Test Selector panel to 2.

76. Set Test Selector panel to 138.

77. Press to light TEST START pushbutton.

78. Monitor lissajous pattern on Oscilloscope and adjust decade inductance until lissajous pattern indicates minimum phase shift.

79. Measure and record both right and left maximum meter deflection of PAVM. Add the absolute values and record result as maximum meter spread. (SCA input.)

80. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and measure and record both high and low voltage indications on DVM. Subtract low voltage from high voltage and record result as maximum meter spread. (SCA output.)

81. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

82. Calculate MG servo error SCA output to MG servo error SCA input as follows.

Record result:

MG servo error =

$$\frac{\text{Step 80, max meter spread}}{\text{Step 79, max meter spread}} = 0.91\ (\pm 15\%)$$

83. Set CROSSBAR CONTROL on Primary Signal Selector panel to 133 to monitor OG servo error on PAVM.

84. Connect decade inductance to PSA TPA test points TB5-31 (high) and TB5-40 (low).

85. Set GIMBAL SERVO TEST switch on Test Selector panel to 3.

86. Set Test Selector panel to 139.

87. Press to light TEST START pushbutton.

88. Monitor lissajous pattern on Oscilloscope and adjust decade inductance until lissajous pattern indicates minimum phase shift.

---

89. Measure and record both right and left maximum meter deflection of PAVM. Add the absolute values and record result as maximum meter spread. (SCA input.)

90. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and measure and record both high and low voltage indications on DVM. Subtract low voltage from high voltage and record result as maximum meter spread. (SCA output.)

91. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

92. Calculate OG servo error SCA output to OG servo error SCA input as follows.

Record result:

OG servo error =

$$\frac{\text{Step 90, max meter spread}}{\text{Step 89, max meter spread}} = 0.91\ (\pm 15\%)$$

93. Press to extinguish GIMBAL SERVO TEST pushbutton on Test Selector panel.

IG, MG, AND OG TORQUE MOTOR CURRENTS

*94. Insure that AMPLITUDE control on Signal Generator is set to 0.

*95. Connect jumper between PROBES OUTPUT DIRECT jacks and CH6DC IN jacks on Auxiliary Input panel.

*96. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to 15.

*97. Insure that CH6DC indicator is lighted.

*98. Zero Oscillograph channel 6 and set sensitivity to 0.1 V/CM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 trace as near center as possible with a 2.5 vdc bias input.

*99. Set FREQUENCY meter on Signal Generator to 1 and RANGE switch to X1.

*100. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*101. Set CROSSBAR CONTROL on Primary Signal Selector panel to 176 to monitor Signal Generator output on Oscilloscope.

*102. Press to light GIMBAL SERVO TEST pushbutton on Test Selector panel.

*103. Connect PSA TPA direct probes to TB2-31 (high) and TB1-49 (low) to monitor IG torque motor current on channel 6. (SCA input.)

*104. Set Test Selector panel to 132 and GIMBAL SERVO TEST switch to 1 to monitor IG torque motor current on channel 8. (SCA output.)

*105. Press to light TEST START pushbutton.

*106. Increase Signal Generator AMPLITUDE control until Oscilloscope indicates 2 volts peak-to-peak. Maintain Signal Generator AMPLITUDE control setting for approximately 10 seconds, then set AMPLITUDE control to 0.

*107. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

*108. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR. Measure and record peak-to-peak SCA input signal monitored on channel 6 and peak-to-peak SCA output signal monitored on channel 8.

*109. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*110. Connect PSA TPA direct probes to TB2-32 (high) and TB1-49 (low) to monitor MG torque motor current on channel 6. (SCA input.)

*111. Press to light TEST START pushbutton.

*112. Increase Signal Generator AMPLITUDE control until Oscilloscope indicates 1 volt peak-to-peak. Maintain Signal Generator AMPLITUDE control setting for approximately 10 seconds, then set AMPLITUDE control to 0.

*113. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

*114. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR. Measure and record peak-to-peak SCA input signal monitored on channel 6 and peak-to-peak SCA output signal monitored on channel 8.

*115. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*116. Connect PSA TPA direct probes to TB1-45 (high) and TB1-49 (low) to monitor OG torque motor current on channel 6. (SCA input.)

*117. Press to light TEST START pushbutton.

*118. Increase Signal Generator AMPLITUDE control until Oscilloscope indicates 1 volt peak-to-peak. Maintain Signal Generator AMPLITUDE control setting for approximately 10 seconds, then set AMPLITUDE control to 0.

*119. Press TEST STOP pushbutton on Test Selector panel. TEST START pushbutton shall go out.

*120. Set CHART DRIVE switch on Oscillograph Control panel to CM/HR. Measure and record peak-to-peak SCA input signal monitored on channel 6 and peak-to-peak SCA output signal monitored on channel 8.

*121. Set GIMBAL SERVO TEST switch on Test Selector panel to OFF. Set CHART DRIVE switch on Oscillograph Control panel to OFF and set sensitivities on Oscillograph Amplifiers to OFF.

1X RESOLVER SIN AND COS

122. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe:
  VERB 21 NOUN 22 Flashing
c. +04500 ENTR
d. Observe:
  VERB 22 NOUN 22 Flashing
e. +04500 ENTR
f. Observe:
  VERB 23 NOUN 22 Flashing
g. +04500 ENTR

---

123. Set CROSSBAR CONTROL on Primary Signal Selector panel to 243 and measure and record IG 1X resolver cos voltage indicated on DVM. (SCA input.)

124. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 amd set Test Selector panel to 120. Measure and record IG 1X resolver cos voltage indicated on DVM. (SCA output.)

125. Calculate SCA output IG 1X resolver cos to SCA input IG 1X resolver cos as follows. Record result:

IG 1X resolver cos =

$$\frac{8.1\ (\text{Step } 124 - \text{Step } 33)}{\text{Step } 123} = 1\ (\pm 10\%)$$

126. Set Test Selector panel to 121 and measure and record MG 1X resolver cos voltage indicated on DVM. (SCA output.)

127. Set CROSSBAR CONTROL on Primary Signal Selector panel to 242 and measure and record MG 1X resolver cos voltage indicated on DVM. (SCA input.)

128. Calculate SCA output MG 1X resolver cos to SCA input MG 1X resolver cos as follows. Record result:

MG 1X resolver cos =

$$\frac{8.1\ (\text{Step } 126 - \text{Step } 33)}{\text{Step } 127} = 1\ (\pm 10\%)$$

129. Set CROSSBAR CONTROL on Primary Signal Selector panel to 241 and measure and record OG 1X resolver cos voltage indicated on DVM. (SCA input.)

130. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and set Test Selector panel to 122. Measure and record OG 1X resolver cos voltage indicated on DVM. (SCA output.)

131. Calculate SCA output OG 1X resolver cos to SCA input OG 1X resolver cos as follows. Record result:

OG 1X resolver cos =

$$\frac{8.1\ (\text{Step } 130 - \text{Step } 33)}{\text{Step } 129} = 1\ (\pm 10\%)$$

132. Set Test Selector panel to 123 and measure and record IG 1X resolver sin voltage indicated on DVM. (SCA output.)

133. Set CROSSBAR CONTROL on Primary Signal Selector panel to 144 and measure and record IG 1X resolver sin voltage indicated on DVM. (SCA input.)

134. Calculate SCA output IG 1X resolver sin to SCA input IG 1X resolver sin as follows. Record result:

IG 1X resolver sin =

$$\frac{8.1\ (\text{Step } 132 - \text{Step } 33)}{\text{Step } 133} = 1\ (\pm 10\%)$$

135. Set CROSSBAR CONTROL on Primary Signal Selector panel to 143 and measure and record MG 1X resolver sin voltage indicated on DVM. (SCA input.)

136. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271 and set Test Selector panel to 124. Measure and record MG 1X resolver sin voltage indicated on DVM. (SCA output.)

---

137. Calculate SCA output MG 1X resolver sin to SCA input MG 1X resolver sin as follows. Record result:

MG 1X resolver sin =

$$\frac{8.1\ (\text{Step } 136 - \text{Step } 33)}{\text{Step } 135} = 1\ (\pm 10\%)$$

138. Set Test Selector panel to 125 and measure and record OG 1X resolver sin voltage indicated on DVM. (SCA output.)

139. Set CROSSBAR CONTROL on Primary Signal Selector panel to 142 and measure and record OG 1X resolver sin voltage indicated on DVM (SCA input.)

140. Calculate SCA output OG 1X resolver sin to SCA input OG 1X resolver sin as follows. Record result:

OG 1X resolver sin =

$$\frac{8.1\ (\text{Step } 138 - \text{Step } 33)}{\text{Step } 139} = 1\ (\pm 10\%)$$

141. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe:
  VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe:
  VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe:

SHAFT AND TRUNNION CDU FINE ERROR

*142. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

*143. Set CROSSBAR CONTROL on Primary Signal Selector panel to 271.

*144. Set Test Selector panel to 146 to connect SCA shaft CDU fine error output to DVM.

*145. Connect jumper between PROBES OUTPUT BUFFERED jacks and PAVM IN jacks on Auxiliary Input panel.

*146. Set PAVM switch on Primary Signal Selector panel to AUX.

*147. Connect PSA TPA buffered probes to TB3-23 (high) and TB3-34 (low) to connect SCA shaft CDU fine error input to PAVM.

*148. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

*149. Perform following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00011 ENTR

*150. Position Optics Hand Controller on Indicator Control panel to the left until PAVM indicates 1.0 vac in-phase. Record SCA output indicated on DVM.

*151. Set OPTICS ZERO switch on Indicator Control panel 2021290 to ZERO. On all Indicator Control panels except 2021290, set OPTICS MODE switch to ZERO.

*152. Enter VERB 06 NOUN 55 into DSKY and press ENTR pushbutton.

*153. Set Test Selector panel to 147 to connect SCA trunnion CDU fine error output to DVM.

---

*154. Connect PSA TPA buffered probes to TB3-22 (high) and TB3-34 (low) to connect SCA trunnion CDU fine error input to PAVM.

*155. Set OPTICS ZERO switch on Indicator Control panel (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

*156. Perform following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00011 ENTR

*157. Position Optics Hand Controller on Indicator Control panel to a down position until PAVM indicates 0.64 vac in-phase. Record SCA output indicated on DVM.

*158. Perform following DSKY operations:

a. VERB 36 ENTR
b. VERB 21 NOUN 10 ENTR
c. 00012 ENTR
d. 00200 ENTR
e. VERB 21 NOUN 10 ENTR

*162. Set Test Selector panel to 126 and measure and record SCA trunnion CDU DAC output indicated on DVM.

*163. Set Test Selector panel to 127 and measure and record SCA shaft CDU DAC output indicated on DVM.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

*164. Set Test Selector panel to 129.

*165. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCA GDB stepper switch

*166. Zero Oscillograph channel 1 and set sensitivity to 20 MV/MM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

*167. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

*168. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS ZERO switch (Indicator Control panel 2021290 only) to OFF and set OPTICS MODE switch to MAN.

*169. Hold Optics Hand Controller to left limit not longer than 20 seconds.

*170. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT shaft tach input and output signals monitored on channels 1 and 8.

*171. Set Test Selector panel to 148 to connect SCA SCT shaft tach output to Oscillograph channel 8.

*172. Set CHANNEL 1 switch on Oscillograph Signal Selector panel to 13 to connect SCA SCT shaft tach input to channel 1.

*173. Zero Oscillograph channel 1 and set sensitivity to 200 MV/MM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

*174. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*175. Set OPTICS SPEED switch on Indicator Control panel to HI.

*176. Hold Optics Hand Controller to right limit for approximately 20 seconds.

*177. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SCT shaft tach input and output signals monitored on channels 1 and 8.

*178. Set Test Selector panel to 130 to connect SCA SXT trunnion tach output to Oscillograph channel 8.

*179. Set CHANNEL 2 switch on Oscillograph Signal Selector panel to 12 to connect SCA SXT trunnion tach input to Oscillograph channel 2.

*180. Zero Oscillograph channel 2 and set sensitivity to 20 MV/MM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

*181. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*182. Set OPTICS SPEED switch on Indicator Control panel to MED.

*183. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

---

*184. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCA SXT trunnion tach input and output signals monitored on channels 2 and 8.

*185. Set Test Selector panel to 149 to connect SCA SCT trunnion tach output to Oscillograph channel 8.

*186. Set CHANNEL 5 switch on Oscillograph Signal Selector panel to 11 to connect SCA SCT trunnion tach input to Oscillograph channel 5.

*187. Insure that CH5AC indicator on Oscillograph Signal Selector panel is lighted.

*188. Zero Oscillograph channel 5 and set sensitivity to 50 MV/MM. Set sensitivity of channel 8 to 1 V/CM and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

*189. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

*190. Set OPTICS SPEED switch on Indicator Control panel to HI.

*191. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

*192. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Set sensitivities on Oscillograph Amplifiers to OFF. Record SCA SCT trunnion tach input and output signals monitored on channels 5 and 8.

YAW, PITCH, AND ROLL ATTITUDE ERRORS

*195. Connect jumper between PROBES OUTPUT DIRECT jacks and PAVM IN jacks on Auxiliary Input panel. Set PAVM switch on Primary Signal Selector panel to AUX.

---

*196. Connect PSA TPA direct probes to TB4-44 (high) and TB4-48 (low) and measure and record SCA yaw attitude error input indicated on PAVM.

*197. Set Test Selector panel to 114 and measure and record SCA yaw attitude error output indicated on DVM.

*198. Calculate SCA yaw attitude error output to SCA yaw attitude error input as follows. Record result:

Yaw attitude error =

$$\frac{2.44\ (\text{Step 197} - \text{Step 33})}{\text{Step 196}} = 1\ (\pm 10\%)$$

*199. Connect PSA TPA direct probes to TB4-45 (high) and TB4-49 (low) and measure and record SCA pitch attitude error input indicated on PAVM.

*200. Set Test Selector panel to 115 and measure and record SCA pitch attitude error output indicated on DVM.

*201. Calculate SCA pitch attitude error output to SCA pitch attitude error input as follows. Record result:

Pitch attitude error =

$$\frac{2.44\ (\text{Step 200} - \text{Step 33})}{\text{Step 199}} = 1\ (\pm 10\%)$$

*202. Connect PSA TPA direct probes to TB4-43 (high) and TB4-47 (low) and measure and record SCA roll attitude error input indicated on PAVM.

*203. Set Test Selector panel to 116 and measure and record SCA roll attitude error output indicated on DVM.

*204. Calculate SCA roll attitude error output to SCA roll attitude error input as follows. Record result:

Roll attitude error =

$$\frac{2.44\ (\text{Step 203} - \text{Step 33})}{\text{Step 202}} = 1\ (\pm 10\%)$$

NOTE: Step 205 applies only when Restart Monitor module (2898989) is installed.

205. Perform the following DSKY operations:

a. VERB 01 NOUN 10 ENTR
b. 00077 ENTR
c. The contents of Row 1 shall be 00000.

206. Perform JDC 12204 to turn off G & N system.

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV. - PAGE 1 OF 10

INITIAL TDRR 32758 D.S. PGS. 8

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY.

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Module. Functional operation is evaluated by checking Signal Conditioner Module input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G and N test configuration for maximum checkout capability.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

2. Connect Signal Conditioner Module (SCM) to G and N system in accordance with JDC 12202.

3. Perform JDC 12204 to advance G and N system to STANDBY mode.

4. Connect jumper between PROBES OUTPUT DIRECT jacks and DVM IN jacks on Auxiliary Input Panel.

5. Connect PSA Test Point Adapter (TPA) direct probes to TB5 jack 26 (high) and TB5 jack 30 (low).

6. Adjust G & N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28 (±0.25) vdc.

7. Press OPTICS POWER ON pushbutton on Test Control panel.

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCM GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL switches on Primary Signal Selector panel to 271.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ______

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit on Test Selector panel position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last two digits.

2. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
101	28 vdc CGC operate
102	28 vdc IMU standby
203	28 vdc optics operate

CMC WARNING

3. Set Test Selector panel to 204.

4. Perform CMC warning lamp test by entering VERB 35 into DSKY and pressing ENTR pushbutton.

5. Record DVM indication when CMC warning lamp on Indicator Control panel is lighted.

PIPA S/G OUTPUT

6. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA S/G output
CHANNEL 5 to 1	Y PIPA S/G output
CHANNEL 6 to 1	X PIPA S/G output
CHANNEL 8 to 4	SCM GDB stepper switch

7. Insure that CH AC indicators are lighted for channels 4, 5, and 6.

8. Zero Oscillograph channels 4, 5, and 6 and set gains at 500 mv/mm. Set gain of channel 8 at 2 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

9. Insure that PROCEED indicator of PROCEED/ISS OPERATE pushbutton on Test Control panel is lighted.

10. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

11. Obtain Oscillograph record of PIPA loop closure data by performing following steps successively for each position of Test Selector panel listed in table I:

a. After at least 30 seconds in ISS standby mode, press PROCEED/ISS OPERATE pushbutton on Test Control panel.

DATE ______

---

b. Press IMU CAGE/COMMAND pushbutton.

c. Wait at least 10 seconds for PIPA loop closure, then press PROCEED/ISS STANDBY pushbutton.

Table I

Test Selector Panel Position	Signal
105	Z PIPA S/G quadrature output
107	Y PIPA S/G quadrature output
108	X PIPA S/G quadrature output
117	Z PIPA S/G in-phase output
118	Y PIPA S/G in-phase output
119	X PIPA S/G in-phase output

12. Stop Oscillograph. Check Oscillograph record for 6 indications of PIPA loop closure on channel 8 correlating to the loop closure indications on channels 4, 5, and 6. Record that traces have centered after loop closure.

POWER SUPPLY AND TEMPERATURE

13. Press PROCEED/ISS OPERATE pushbutton on Test Control panel and wait 90 seconds, then repeat step A.6.

14. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
104	2.5 vdc TM bias
103	120 vdc PIPA supply level
106	3200 cps 28 volt supply
113	800 cps 28 volt 1% IMU
128	800 cps 28 volt 1% optics
150	IMU heater current
151	IMU blower current
201	PIPA temperature
202	IRIG temperature

IG, MG, AND OG SERVO ERRORS

15. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe: VERB 21 NOUN 22 Flashing
c. +00000 ENTR
d. Observe: VERB 22 NOUN 22 Flashing
e. +00000 ENTR
f. Observe: VERB 23 NOUN 22 Flashing
g. +00000 ENTR

16. Connect following signals to Oscillograph by setting following switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 1 to 2	IG servo error
CHANNEL 2 to 2	MG servo error
CHANNEL 3 to 2	OG servo error
CHANNEL 8 to 4	SCM GDB stepper switch

DATE ______

---

17. Insure that CH 3 AC indicator is lighted.

18. Zero Oscillograph channels 1, 2, and 3 and set gains at 500 mv/mm. Set gain of channel 8 at 2 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

19. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel.

20. Set switches on Signal Generator as follows:

FUNCTION to SINE
RANGE to X.01
FREQUENCY meter to 20

21. Set NOR/GSE CAL switch inside Auxiliary Input Panel to NOR.

22. Perform following DSKY operations:

a. VERB 42 ENTR
b. VERB 33 ENTR

23. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

24. Press TEST START pushbutton on Test Selector panel.

25. Obtain an Oscillograph trace of stabilization loop servo error data by increasing the Signal Generator AMPLITUDE control to three-fourths of maximum for approximately 10 seconds for each test listed in table II.

Table II

Test	GIMBAL SERVO TEST Switch Position	Test Selector Panel Position	Signal
a	1	137	IG servo error
b	2	138	MG servo error
c	3	139	OG servo error

26. Stop Oscillograph. Record peak-to-peak SCM input signals monitored on channels 1, 2, and 3, and peak-to-peak SCM output signals monitored on channel 8.

IG, MG, AND OG TORQUE MOTOR CURRENTS

27. Insure that AMPLITUDE control on Signal Generator is set to 0.

28. Connect jumper between PROBES OUTPUT DIRECT jacks and CH 6 DC IN jacks on Auxiliary Input Panel.

29. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to 15.

30. Zero Oscillograph channel 6 and set gain at 0.2 v/cm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

31. Set FREQUENCY meter on Signal Generator to 50 and RANGE switch to X1.

32. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

33. Set CROSSBAR CONTROL switches on Primary Signal Selector panel to 176 to monitor Signal Generator output on Oscilloscope.

34. Obtain Oscillograph trace of torque motor currents by increasing Signal Generator AMPLITUDE control until Oscilloscope indicates value listed in table III for each test. Maintain Signal Generator setting for approximately 10 seconds. For each test, connect PSA TPA direct probes, set Test Selector panel, and set GIMBAL SERVO TEST switch as indicated.

JOB BLOCK II SIGNAL CONDITIONER FUNCTIONAL CHECKOUT

JDC 12224 REV. - PAGE 1 OF 10

INITIAL TDRR 32758 D.S. PGS 8

SUBSYSTEM BLOCK II G & N SYSTEM

ASSY.

DESCRIPTION This JDC provides a functional checkout procedure for the Signal Conditioner Module. Functional operation is evaluated by checking Signal Conditioner Module input and output data for proper correlation. Procedural methods are incorporated to cause signal generation in normally nulled loops where possible in a G and N test configuration for maximum checkout capability.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

A. PREPARATION

1. Perform JDC 12204 to downmode to OIA PILOT POWER mode.

CAUTION: Extreme care must be exercised when mating connectors to prevent pin and jack damage.

2. Connect Signal Conditioner Module (SCM) to G and N system in accordance with JDC 12202.

3. Perform JDC 12204 to advance G and N system to STANDBY mode.

4. Connect jumper between PROBES OUTPUT DIRECT jacks and DVM IN jacks on Auxiliary Input Panel.

5. Connect PSA Test Point Adapter (TPA) direct probes to TB5 jack 26 (high) and TB5 jack 30 (low).

6. Adjust G & N POWER ADJUST control on Test Control panel until Digital Voltmeter (DVM) indicates 28 (±0.25) vdc.

7. Press OPTICS POWER ON pushbutton on Test Control panel.

B. PROCEDURE

28 VDC STANDBY AND OPERATE

1. Connect SCM GSE Distribution Box (GDB) stepper switch to DVM by setting CROSSBAR CONTROL switches on Primary Signal Selector panel to 271.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ________

NOTE: To position Test Selector panel, perform following operations:

a. Press SIGNAL CONDITIONER LEVEL 1 ENABLE pushbutton if first digit on Test Selector panel position is 1, or press SIGNAL CONDITIONER LEVEL 2 ENABLE pushbutton if first digit is 2.

b. Press PUSH TO ADVANCE pushbutton until display indicates last two digits.

2. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
101	28 vdc CGC operate
102	28 vdc IMU standby
203	28 vdc optics operate

CMC WARNING

3. Set Test Selector panel to 204.

4. Perform CMC warning lamp test by entering VERB 35 into DSKY and pressing ENTR pushbutton.

5. Record DVM indication when CMC warning lamp on Indicator Control panel is lighted.

PIPA S/G OUTPUT

6. Connect following signals to Oscillograph by setting switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 4 to 1	Z PIPA S/G output
CHANNEL 5 to 1	Y PIPA S/G output
CHANNEL 6 to 1	X PIPA S/G output
CHANNEL 8 to 4	SCM GDB stepper switch

7. Insure that CH AC indicators are lighted for channels 4, 5, and 6.

8. Zero Oscillograph channels 4, 5, and 6 and set gains at 500 mv/mm. Set gain of channel 8 at 2 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

9. Insure that PROCEED indicator of PROCEED/ISS OPERATE pushbutton on Test Control panel is lighted.

10. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

11. Obtain Oscillograph record of PIPA loop closure data by performing following steps successively for each position of Test Selector panel listed in table I:

a. After at least 30 seconds in ISS standby mode, press PROCEED/ISS OPERATE pushbutton on Test Control panel.

DATE ________

---

b. Press IMU CAGE/COMMAND pushbutton.

c. Wait at least 10 seconds for PIPA loop closure, then press PROCEED/ISS STANDBY pushbutton.

Table I

Test Selector Panel Position	Signal
105	Z PIPA S/G quadrature output
107	Y PIPA S/G quadrature output
108	X PIPA S/G quadrature output
117	Z PIPA S/G in-phase output
118	Y PIPA S/G in-phase output
119	X PIPA S/G in-phase output

12. Stop Oscillograph. Check Oscillograph record for 6 indications of PIPA loop closure on channel 8 correlating to the loop closure indications on channels 4, 5, and 6. Record that traces have centered after loop closure.

POWER SUPPLY AND TEMPERATURE

13. Press PROCEED/ISS OPERATE pushbutton on Test Control panel and wait 90 seconds, then repeat step A.6.

14. Set Test Selector panel to positions indicated and measure and record following voltages on DVM:

Test Selector Panel Position	Voltage
104	2.5 vdc TM bias
103	120 vdc PIPA supply level
106	3200 cps 28 volt supply
113	800 cps 28 volt 1% IMU
128	800 cps 28 volt 1% optics
150	IMU heater current
151	IMU blower current
201	PIPA temperature
202	IRIG temperature

IG, MG, AND OG SERVO ERRORS

15. Perform following DSKY operations:

a.	VERB 41	NOUN 20	ENTR
b.	Observe: VERB 21	NOUN 22	Flashing
c.	+00000		ENTR
d.	Observe: VERB 22	NOUN 22	Flashing
e.	+00000		ENTR
f.	Observe: VERB 23	NOUN 22	Flashing
g.	+00000		ENTR

16. Connect following signals to Oscillograph by setting following switches on Oscillograph Signal Selector panel to positions indicated:

Switch	Signal
CHANNEL 1 to 2	IG servo error
CHANNEL 2 to 2	MG servo error
CHANNEL 3 to 2	OG servo error
CHANNEL 8 to 4	SCM GDB stepper switch

DATE ________

---

17. Insure that CH 3 AC indicator is lighted.

18. Zero Oscillograph channels 1, 2, and 3 and set gains at 500 mv/mm. Set gain of channel 8 at 2 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

19. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel.

20. Set switches on Signal Generator as follows:

FUNCTION to SINE
RANGE to X.01
FREQUENCY meter to 20

21. Set NOR/GSE CAL switch inside Auxiliary Input Panel to NOR.

22. Perform following DSKY operations:

a.	VERB 42	ENTR
b.	VERB 33	ENTR

23. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

24. Press TEST START pushbutton on Test Selector panel.

25. Obtain an Oscillograph trace of stabilization loop servo error data by increasing the Signal Generator AMPLITUDE control to three-fourths of maximum for approximately 10 seconds for each test listed in table II.

Table II

Test	GIMBAL SERVO TEST Switch Position	Test Selector Panel Position	Signal
a	1	137	IG servo error
b	2	138	MG servo error
c	3	139	OG servo error

26. Stop Oscillograph. Record peak-to-peak SCM input signals monitored on channels 1, 2, and 3, and peak-to-peak SCM output signals monitored on channel 8.

IG, MG, AND OG TORQUE MOTOR CURRENTS

27. Insure that AMPLITUDE control on Signal Generator is set to 0.

28. Connect jumper between PROBES OUTPUT DIRECT jacks and CH 6 DC IN jacks on Auxiliary Input Panel.

29. Set OSCILLOGRAPH SELECTOR CHANNEL 6 switch on Oscillograph Signal Selector panel to 15.

30. Zero Oscillograph channel 6 and set gain at 0.2 v/cm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

31. Set FREQUENCY meter on Signal Generator to 50 and RANGE switch to X1.

32. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

33. Set CROSSBAR CONTROL switches on Primary Signal Selector panel to 176 to monitor Signal Generator output on Oscilloscope.

34. Obtain Oscillograph trace of torque motor currents by increasing Signal Generator AMPLITUDE control until Oscilloscope indicates value listed in table III for each test. Maintain Signal Generator setting for approximately 10 seconds. For each test, connect PSA TPA direct probes, set Test Selector panel, and set GIMBAL SERVO TEST switch as indicated.

DATE ________

Table III

Test	Signal Generator Output	PSA TPA Test Points High	PSA TPA Test Points Low	Test Selector Panel Position	GIMBAL SERVO TEST Switch Position	Signal
a	2V peak-to-peak	TB2-31	TB1-49	132	1	IG torque motor curren
b	1V peak-to-peak	TB2-32	TB1-49	133	2	MG torque motor current
c	1V peak-to-peak	TB1-45	TB1-49	134	3	OG torque motor current

35. Stop Oscillograph. Record peak-to-peak SCM input signal monitored on channel 6 and peak-to-peak SCM output signal monitored on channel 8.

1X RESOLVER SIN AND COS

36. Perform following DSKY operations:

a. VERB 41 NOUN 20 ENTR
b. Observe: VERB 21 NOUN 22 Flashing
c. +04500 ENTR
d. Observe: VERB 22 NOUN 22 Flashing

SHAFT AND TRUNNION CDU FINE ERROR

40. Set OPTICS switches on Indicator Control panel as follows:

MODE to CGC
COUPLING to DIRECT
TELESCOPE TRUNNION to SLAVE TO SXT
SPEED to LOW
TRACKER to OFF

41. Enter VERB 40 NOUN 55 into DSKY and press ENTR pushbutton.

42. Connect SCM shaft CDU fine error output to DVM by setting Test Selector panel to 146.

43. Connect jumper between PROBES OUTPUT BUFFERED jacks and PAVM IN jacks on Auxiliary Input Panel.

44. Connect SCM shaft CDU fine error input to PAVM by connecting PSA TPA buffered probes to TB3 jack 23 (high) and TB3 jack 34 (low).

45. Set OPTICS MODE switch on Indicator Control panel to MAN.

46. Perform following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00012 ENTR
c. 00011 ENTR

47. Using Optics Hand Controller on Indicator Control panel, drive optics shaft axis until PAVM indicates 1.00 vac. Record DVM indication.

48. Set OPTICS MODE switch to CGC.

49. Enter VERB 40 NOUN 55 into DSKY and press ENTR pushbutton.

50. Connect SCM trunnion CDU fine error output to DVM by setting Test Selector panel to 147.

51. Connect SCM trunnion CDU fine error input to PAVM by connecting PSA TPA buffered probes to TB3 jack 22 (high) and TB3 jack 34 (low).

52. Repeat steps 45 and 46.

53. Using Optics Hand Controller, drive optics trunnion axis until PAVM indicates 1.00 vac. Record DVM indication.

54. Set OPTICS MODE switch to CGC.

55. Enter VERB 40 NOUN 55 into DSKY and press ENTR pushbutton.

SHAFT AND TRUNNION CDU DAC OUTPUTS

56. Set OPTICS MODE switch on Indicator Control panel to MAN.

57. Perform following DSKY operations:

a. VERB 21 NOUN 01 ENTR
b. 00035 ENTR
c. 00000 ENTR
d. VERB 21 NOUN 01 ENTR
e. 00036 ENTR
f. 00000 ENTR
g. VERB 21 NOUN 10 ENTR
h. 00012 ENTR

m. VERB 21 NOUN 01 ENTR
n. 00036 ENTR
o. 01644 ENTR

58. Connect SCM trunnion CDU DAC output to DVM by setting Test Selector panel to 126. Record DVM indication.

59. Connect SCM shaft CDU DAC output to DVM by setting Test Selector panel to 127. Record DVM indication.

60. Set OPTICS MODE switch on Indicator Control panel to CGC. Wait 10 seconds, then set OPTICS MODE switch to ZERO.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

61. Set Test Selector panel to 129.

62. Connect SCM SXT shaft tach input and output signals to Oscillograph by setting switches on Oscillograph Signal Selector panel as follows:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCM GDB stepper switch

63. Zero Oscillograph channel 1 and set gain at 20 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

64. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

65. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS MODE switch to MAN.

66. Hold Optics Hand Controller to left limit not longer than 20 seconds.

67. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCM SXT shaft tach input and output signals monitored on channels 1 and 8.

68. Set Test Selector panel to 148 to connect SCM SCT shaft tach output to Oscillograph.

69. Connect SCM SCT shaft tach input to Oscillograph by setting CHANNEL 1 switch on Oscillograph Signal Selector panel to 13.

---

70. Zero Oscillograph channel 1 and set gain at 200 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

71. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

72. Set OPTICS SPEED switch on Indicator Control panel to HI.

73. Hold Optics Hand Controller to right limit for approximately 20 seconds.

74. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCM SCT shaft tach input and output signals monitored on channels 1 and 8.

75. Set Test Selector panel to 130 to connect SCM SXT trunnion tach output to Oscillograph.

76. Connect SCM SXT trunnion tach input to Oscillograph by setting CHANNEL 2 switch on Oscillograph Signal Selector panel to 12.

77. Zero Oscillograph channel 2 and set gain at 20 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

78. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

79. Set OPTICS SPEED switch on Indicator Control panel to MED.

80. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

81. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCM SXT trunnion tach input and output signals monitored on channels 2 and 8.

82. Set Test Selector panel to 149 to connect SCM SCT trunnion tach output to Oscillograph.

83. Connect SCM SCT trunnion tach input to Oscillograph by setting CHANNEL 5 switch on Oscillograph Signal Selector panel to 11.

84. Insure that CH 5 AC indicator is lighted.

85. Zero Oscillograph channel 5 and set gain at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

86. Set CHART DRIVE switch on Oscillograph Control to MM/SEC.

87. Set OPTICS SPEED switch on Indicator Control panel to HI.

88. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

89. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCM SCT trunnion tach input and output signals monitored on channels 5 and 8.

59. Connect SCM shaft CDU DAC output to DVM by setting Test Selector panel to 127. Record DVM indication.

60. Set OPTICS MODE switch on Indicator Control panel to CGC. Wait 10 seconds, then set OPTICS MODE switch to ZERO.

SXT AND SCT SHAFT AND TRUNNION TACH OUTPUTS

61. Set Test Selector panel to 129.

62. Connect SCM SXT shaft tach input and output signals to Oscillograph by setting switches on Oscillograph Signal Selector panel as follows:

Switch	Signal
CHANNEL 1 to 12	SXT shaft tach monitor
CHANNEL 8 to 4	SCM GDB stepper switch

63. Zero Oscillograph channel 1 and set gain at 20 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

64. Press CHART SPEEDS 5 pushbutton on Oscillograph Control panel and set CHART DRIVE switch to MM/SEC.

65. Set OPTICS SPEED switch on Indicator Control panel to MED. Set OPTICS MODE switch to MAN.

66. Hold Optics Hand Controller to left limit not longer than 20 seconds.

67. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCM SXT shaft tach input and output signals monitored on channels 1 and 8.

68. Set Test Selector panel to 148 to connect SCM SCT shaft tach output to Oscillograph.

69. Connect SCM SCT shaft tach input to Oscillograph by setting CHANNEL 1 switch on Oscillograph Signal Selector panel to 13.

---

70. Zero Oscillograph channel 1 and set gain at 200 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

71. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

72. Set OPTICS SPEED switch on Indicator Control panel to HI.

73. Hold Optics Hand Controller to right limit for approximately 20 seconds.

74. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCM SCT shaft tach input and output signals monitored on channels 1 and 8.

75. Set Test Selector panel to 130 to connect SCM SXT trunnion tach output to Oscillograph.

76. Connect SCM SXT trunnion tach input to Oscillograph by setting CHANNEL 2 switch on Oscillograph Signal Selector panel to 12.

77. Zero Oscillograph channel 2 and set gain at 20 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

78. Set CHART DRIVE switch on Oscillograph Control panel to MM/SEC.

79. Set OPTICS SPEED switch on Indicator Control panel to MED.

80. Hold Optics Hand Controller to upper limit not longer than 10 seconds.

81. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCM SXT trunnion tach input and output signals monitored on channels 2 and 8.

82. Set Test Selector panel to 149 to connect SCM SCT trunnion tach output to Oscillograph.

83. Connect SCM SCT trunnion tach input to Oscillograph by setting CHANNEL 5 switch on Oscillograph Signal Selector panel to 11.

84. Insure that CH 5 AC indicator is lighted.

85. Zero Oscillograph channel 5 and set gain at 50 mv/mm. Set gain of channel 8 at 1 v/cm and zero adjust channel 8 for a centered trace with a 2.5 vdc bias input.

86. Set CHART DRIVE switch on Oscillograph Control to MM/SEC.

87. Set OPTICS SPEED switch on Indicator Control panel to HI.

88. Hold Optics Hand Controller to lower limit for approximately 10 seconds.

89. Set CHART DRIVE switch on Oscillograph Control panel to OFF. Record SCM SCT trunnion tach input and output signals monitored on channels 5 and 8.

94. Connect SCM input to PAVM and SCM output to DVM by connecting PSA TPA direct probes to test points listed in table V and setting Test Selector panel to positions indicated. Record SCM input on PAVM and SCM output on DVM for each test.

Table V

Test	PSA TPA Test Points		Test Selector Panel Position	Signal
	High	Low		
a	TB4-43	TB4-47	116	Roll attitude error
b	TB4-44	TB4-48	114	Yaw attitude error
c	TB4-45	TB4-49	115	Pitch attitude error

95. Perform JDC 12204 to turn off G and N system.

C. CALCULATIONS

1. Perform following 1X resolver cos and sin calculations:

a. IG 1X resolver cos =

$$\frac{8.1\ (\text{SCM output (DVM)} - 2.5\ \text{vdc bias})}{\text{SCM input (DVM)}}$$

= 1 (±10%)

b. MG 1X resolver cos =

$$\frac{8.1\ (\text{SCM output (DVM)} - 2.5\ \text{vdc bias})}{\text{SCM input (DVM)}}$$

= 1 (±10%)

c. OG 1X resolver cos =

$$\frac{8.1\ (\text{SCM output (DVM)} - 2.5\ \text{vdc bias})}{\text{SCM input (DVM)}}$$

= 1 (±10%)

JOB RETEST PROCEDURES FOR CDU

JDC 12285 **REV.** - **PAGE** 1 **OF** 7
INITIAL TDRR 36995 **D.S. PGS** 5

SUBSYSTEM G AND N SYSTEM
ASSY.

DESCRIPTION This JDC provides the retests required to demonstrate the integrity of a replacement CDU in a G & N System configuration.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL	
			JDC	D.S.	MIT	NASA

REFERENCES ND 1021043

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Avoid slewing SXT shaft and trunnion axes into their mechanical stops.

2. Insure that cable W226-P1 is removed and connector assembly (2003099) is connected to CGC test connector before proceeding with this JDC.

NOTE: If VERB display on DSKY contains a number from 11 through 17, KEY REL may flash when DSKY entries are made.

A. PREPARATION

DOWNMODE

1. Downmode system to OIA ON in accordance with JDC 12204.

CDU REMOVAL

2. Disconnect and remove CDU that is to be replaced in accordance with JDC 17104.

INSPECTION

3. Inspect replacement CDU as follows and record observed indications:

a. Inspection status indicators such as tags and stamps to insure all respective subassembly requirements have been met.

b. Harnesses for nicks, scratches, wire abrasions, loose lacing, dents, incapsulant defects, and pin condition.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE __________

---

c. Mating surfaces for cracks and foreign material.

d. Markings for legibility, appearance and proper registration.

e. Surfaces for scratches, dents, nicks, or other obvious defects.

f. All potting material for condition.

g. All plugs and jacks for pin condition.

INSTALLATION

4. Install replacement CDU in accordance with JDC 17104.

TURNON

5. Perform following JDC's in the order listed:

a. JDC 12202

b. JDC 12203

6. Perform JDC 12215 to establish a Master Initialization condition, then place system in ISS STANDBY mode in accordance with JDC 12204.

7. Insure STBY indicator on DSKY is not lighted. If lighted, press and hold PRO (or STBY) pushbutton until indicator goes out. If STBY indicator does not go out within 5 seconds, release and press pushbutton again. If PRO (or STBY) pushbutton is pressed more than once, record in system log the number of times pressed. Press ALARM RESET pushbutton on CTS Programmer and Monitor panel.

8. Set CROSSBAR CONTROL on Primary Signal Selector panel to 171. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 28.0 (±0.25) vdc. Record.

NOTE: Standby Requirements. Allow 2 hours to elapse before proceeding with following exceptions:

a. If G & N System has been in power off state for less than five days with gimbals in parked position (IG and OG at 0° and MG at 90° with G & N Mounting Fixture cradle at 32.5°) and system has not been moved, wait 90 seconds before proceeding.

b. If G & N System has been in power off state for less than 15 minutes with gimbals in unparked position, wait 90 seconds before proceeding.

c. If G & N System has been in power off state with gimbals in unparked position for more than 15 minutes but less than 2 hours, allow warmup time equal to the time off before proceeding.

B. PROCEDURE

9. Set CROSSBAR CONTROL on Primary Signal Selector panel to 175. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 28.8 (±0.25) vdc. Record indication.

DATE __________

---

10. Insure PROCEED portion of PROCEED/ISS OPERATE pushbutton on Test Control panel is lighted. Press PROCEED/ISS OPERATE pushbutton. ISS OPERATE shall light.

NOTE: Wait until WHEEL RUN UP lamp on Monitor panel goes out before proceeding.

11. Perform the following DSKY operations:

a. VERB 36 ENTR
b. VERB 40 NOUN 20 ENTR
c. Wait 5 seconds before proceeding
d. VERB 36 ENTR
e. VERB 41 NOUN 20 ENTR
f. Observe
VERB 21 NOUN 22 Flashing
g. +09000 ENTR
h. Observe
VERB 22 NOUN 22 Flashing
i. +09000 ENTR
j. Observe
VERB 23 NOUN 22 Flashing
k. +09000 ENTR
l. Observe
NO ATT lamp lights
GIMBAL LOCK lamps on DSKY and Monitor panel light.

12. Perform following DSKY operations:

a. VERB 06 NOUN 20 ENTR
b. Observe
Row 1 indicates approximately +09000
Row 2 indicates approximately +09000
Row 3 indicates approximately +09000

NOTE: PROG alarm on DSKY may light during performance of step 13. Ignore alarm.

13. Press PROCEED/ISS STANDBY pushbutton. ISS OPERATE shall go out and ISS STANDBY shall remain lighted.

TURN-ON CAGE TEST

14. Perform following DSKY operations:

a. VERB 34 ENTR
b. VERB 11 NOUN 10 ENTR
c. 00012 ENTR

15. Insure that PROCEED portion of PROCEED/ISS OPERATE pushbutton is lighted. Press PROCEED/ISS OPERATE pushbutton. PROCEED shall go out and ISS OPERATE shall light. NO ATT lamp on DSKY shall light.

16. Observe PIPA Monitor Scope and verify and record that PIPA torquing is not present until after DSKY display changes from 00030 to 40000 to 00000. NO ATT lamp shall go out.

17. Perform following DSKY operations:

a. VERB 16 NOUN 20 ENTR

18. Record OG, MG and IG positions indicated on Gimbal Position Control panel and on DSKY displays. All axes shall indicate approximately 000.00°.

POWER SUPPLIES TEST

19. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON shall light.

DATE __________

---

20. Set CROSSBAR CONTROL on Primary Signal Selector panel to positions listed below and measure and record corresponding signals on DVM. Use Oscilloscope to measure peak-to-peak noise on signal listed in step f. Record.

Step	Signal	CROSSBAR CONTROL
a.	28 vdc operate/IMU	269
b.	28 vdc operate/IMU	220
c.	28 vdc optics	200
d.	IMU 28 v 800 cps 1%	121
e.	Optics 28 v 800 cps 1%	101
f.	CDU +4 vdc	118

21. Set Counter switches and controls as follows:

a. DISPLAY TIME (N_2) to 10^5
b. DISPLAY RESET to ZERO
c. CLOCK FREQUENCY DIVIDER to 10
d. CLOCK SELECTOR to INT
e. INPUT SELECTOR to C SENSE
f. SENSE SELECTOR to FWD
g. TRIGGER VOLTAGE ATTEN D to 10 AC
h. TRIGGER VOLTAGE fully counterclockwise
i. SAMPLE TIME (N_1) to 008000
j. FUNCTION to RATIO OR PERIOD

22. Insure D SIGNAL pushbutton on Primary Signal Selector panel is lighted. Set COUNTER INPUT "D" SIGNAL selector to 1.

23. Adjust TRIGGER VOLTAGE ATTEN D selector switch on Counter to highest attenuation level that causes triggering. Set corresponding TRIGGER VOLTAGE control to insure Counter starts and stops in approximately 10 seconds.

24. Set switches to positions listed below and measure corresponding signal frequencies on Counter. Record.

Step	Signal	COUNTER INPUT "D" SIGNAL Selector	Counter SAMPLE TIME (N_1)
a.	IMU 28 volts 800 cps 1%	1	008000
b.	Optics 28 volts 800 cps 1%	2	008000

OPTICS CDU TEST

25. Perform following DSKY operations:

a. VERB 36 ENTR
b. VERB 40 NOUN 20 ENTR
c. VERB 41 NOUN 20 ENTR
d. +00000 ENTR
e. +00000 ENTR
f. +00000 ENTR
g. Observe
VERB 41 NOUN 22 Displayed
NO ATT Lights

NOTE: Step 26 applies to Indicator Control panel 2021290 only.

26. Set switches on Indicator Control panel to positions listed below:

a. OPTICS COUPLING to DIRECT

DATE __________

JOB RETEST PROCEDURES FOR CDU | JDC 12285, REV - PAGE 5 OF 7

SUBSYSTEM G AND N SYSTEM | ASSY

b. OPTICS MODE to MAN
c. OPTICS TEL TRUN to SLAVE TO SXT
d. OPTICS ZERO to OFF
e. OPTICS SPEED to LO
f. CONDITION LAMPS to ON
g. UP TELEMETRY to ACCEPT

NOTE: Step 27 applies to all Indicator Control panels except 2021290.

27. Set switches on Indicator Control panel to positions listed below:

a. OPTICS CONTROLLER COUPLING to DIRECT
b. OPTICS MODE to MAN
c. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT
d. OPTICS TRACKER to OFF
e. OPTICS CONTROLLER SPEED to LO
f. CONDITION LAMPS to ON
g. UP TELEMETRY to ACCEPT

NOTE: Step 28 applies to Indicator Control panel 2021290 only.

28. Set OPTICS ZERO switch to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS MODE switch to CMC.

NOTE: Step 29 applies to all Indicator Control panels except 2021290.

29. Set OPTICS MODE switch to ZERO. After 20 seconds, set OPTICS MODE switch to CGC.

30. Perform following DSKY operations:

a. VERB 16 NOUN 55 ENTR

31. Set OPTICS MODE switch to MAN.

32. Position Optics Hand Controller as listed below, and slew SXT trunnion (DSKY Row 2) to each position listed and record corresponding trunnion TPAC indication. Use desired slew speed.

Step	SXT Trunnion DSKY Row 2 Positions	Optics Hand Controller Position
a.	00.000 (±0.010)	Up or Down
b.	22.500 (±0.010)	Up
c.	45.000 (±0.010)	Up
d.	67.500 (±0.010)	Up
e.	90.000 (±0.010)	Up

33. Position Optics Hand Controller down and slew SXT trunnion until DSKY Row 2 indicates zero.

34. Position Optics Hand Controller as listed below, and slew SXT shaft (DSKY Row 1) to each position listed and record corresponding shaft TPAC indication. Use desired slew speed.

Step	SXT Shaft DSKY Row 1 Position	Optics Hand Controller Position
a.	000.00 (±.010)	left or right
b.	045.00 (±.010)	right
c.	090.00 (±.010)	right
d.	135.00 (±.010)	right
e.	180.00 (±.010)	right
f.	225.00 (±.010)	right
g.	270.00 (±.010)	right

DATE ________

JOB RETEST PROCEDURES FOR CDU | JDC 12285 REV - PAGE 6 OF 7

SUBSYSTEM G AND N SYSTEM | ASSY

NOTE: Step 35 applies to Indicator Control panel 2021290 only.

35. Set OPTICS ZERO switch to ZERO. Wait one minute before proceeding. Set OPTICS ZERO switch to OFF and OPTICS MODE switch to CMC and perform following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

NOTE: Wait until optics stop driving before proceeding.

NOTE: Step 36 applies to all Indicator Control panels except 2021290.

36. Set OPTICS MODE switch to ZERO. Wait one minute before proceeding. Set OPTICS MODE switch to CGC and perform following DSKY operations:

a. VERB 41 NOUN 55 ENTR
b. +27000 ENTR
c. +45000 ENTR

NOTE: Wait until optics stop driving before proceeding.

37. Perform following DSKY operations:

a. VERB 06 NOUN 55 ENTR
b. Record Row 1 and Row 2 indications

38. Record shaft and trunnion TPAC indications.

39. Using Optics Hand Controller, position the SXT Trunnion between 0° and 10° as indicated by the Trunnion TPAC.

NOTE: Step 40 applies to Indicator Control panel 2021290 only.

40. Set OPTICS ZERO switch to ZERO. After 20 seconds, set OPTICS ZERO switch to OFF. Set OPTICS MODE switch to MAN.

NOTE: Step 41 applies to all Indicator Control panels except 2021290.

41. Set OPTICS MODE switch to ZERO. After 20 seconds, set OPTICS MODE switch to MAN.

CDU TRUN FINE ERROR

42. Set CROSSBAR CONTROL to 206 to monitor CDU trunnion fine error on PAVM.

43. Set DEGREES dial on PAVM to 50.

NOTE: Step 44 applies to Indicator Control panel 2021290 only.

44. Set OPTICS SPEED switch to LO.

NOTE: Step 45 applies to all Indicator Control panels except 2021290.

45. Set OPTICS CONTROLLER SPEED switch to LO.

46. Hold Optics Hand Controller at upper limit and measure voltage indicated on PAVM while Optics is slewing. Record PAVM indication and release Optics Hand Controller.

DATE ________

JOB RETEST PROCEDURES FOR CGC

JDC 12286 REV. - PAGE 1 OF 10

INITIAL TDRR 36995 D.S. PGS "

SUBSYSTEM G AND N SYSTEM

ASSY.

DESCRIPTION This JDC provides the retests required to demonstrate the integrity of a replacement CGC in a G & N System configuration.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL	
			JDC	D.S.	MIT	NASA

REFERENCES ND 1021043

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: Avoid slewing SXT shaft and trunnion axes into their mechanical stops.

2. Insure that connector assembly (2003099) is removed and cable W226-P1 is connected to CGC test connector before proceeding with this JDC.

NOTE: If VERB display on DSKY contains a number from 11 through 17, KEY REL may flash when DSKY entries are made.

A. PREPARATION

DOWNMODE

1. Downmode system to OIA ON in accordance with JDC 12204.

CGC REMOVAL

2. Disconnect and remove CGC that is to be replaced in accordance with JDC 17104.

INSPECTION

3. Inspect replacement CGC as follows and record observed indications:

a. Inspection status indicators such as tags and stamps to insure all respective subassembly requirements have been met.

b. Harnesses for nicks, scratches, wire abrasions, loose lacing, dents, incapsulant defects, and pin condition.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ________

---

c. Mating surfaces for cracks and foreign material.

d. Markings for legibility, appearance, and proper registration.

e. Surfaces for scratches, dents, nicks, or other obvious defects.

f. All potting material for condition.

g. All plugs and jacks for pin condition.

INSTALLATION

4. Install replacement CGC in accordance with JDC 17104.

TURNON

5. Perform following JDC's in the order listed:

a. JDC 12202

b. JDC 12203

6. Perform JDC 12215 to establish a Master Initialization condition, then place system in ISS STANDBY mode in accordance with JDC 12204.

7. Insure STBY indicator on DSKY is not lighted. If lighted, press and hold PRO (or STBY) pushbutton until indicator goes out. If STBY indicator does not go out within 5 seconds, release and press pushbutton again. If PRO (or STBY) pushbutton is pressed more than once, record in system log the number of times pressed. Press ALARM RESET pushbutton on CTS Programmer and Monitor panel.

NOTE: Standby Requirements. Allow 2 hours to elapse before proceeding with following exceptions:

a. If G & N system has been power off state for less than five days with gimbals in parked position (IG and OG at 0° and MG at 90° with G & N Mounting Fixture cradle at 32.5°) and system has not been moved, wait 90 seconds before proceeding.

b. If G & N system has been in power off state for less than 15 minutes with gimbals in unparked position, wait 90 seconds before proceeding.

c. If G & N system has been in power off state with gimbals in unparked position for more than 15 minutes but less than 2 hours, allow warmup time equal to the time off before proceeding.

8. Set CROSSBAR CONTROL on Primary Signal Selector panel to 171. Adjust G & N

DATE ________

POWER ADJUST control on Test Control panel until DVM indicates 28.8 (±1.0) vdc. Record indication.

B. PROCEDURE

9. Perform following DSKY operations:

a. VERB 36 ENTR

b. VERB 60 ENTR

c. Press and hold PRO (or STBY) pushbutton until STBY indicator goes out

d. Observe:

NO ATT and TEMP Lighted

28 VDC IMU STANDBY BUS

10. Set CROSSBAR CONTROL to 172. Adjust G & N POWER ADJUST control until DVM indicates 28.8 (±1.0) vdc. Record indication.

11. Set CROSSBAR CONTROL to 120. Measure and record voltage indicated on DVM.

3200 CPS SUSPENSION POWER

12. Set Counter switches and controls as follows:

a. DISPLAY TIME (N_2) to 10^5

b. DISPLAY RESET to ZERO

c. CLOCK FREQUENCY DIVIDER to 10

d. CLOCK SELECTOR to INT

e. FUNCTION to OFF

f. INPUT SELECTOR to C SENSE

g. SENSE SELECTOR to FWD

h. TRIGGER VOLTAGE ATTN D to 10

i. TRIGGER VOLTAGE fully counterclockwise

j. SAMPLE TIME (N_1) to 032000

k. FUNCTION to RATIO OR PERIOD

13. Set COUNTER INPUT "D" SIGNAL selector on Primary Signal Selector panel to 5. Insure that D SIGNAL pushbutton is lighted.

14. Adjust ATTEN D selector on Counter to highest level that causes triggering. Set corresponding TRIGGER VOLTAGE control to insure Counter starts and stops in approximately 10 seconds. Counter shall indicate approximately 100000. Record Counter indication.

15. Set CROSSBAR CONTROL to 123. Measure and record voltage indicated on DVM (28V 3200 cps feedback).

MASTER CLOCK SYNC

NOTE: Do not perform step 16 if Auxiliary Calibration System is to be used.

16. Insure that JDC 04830 has been performed within the past seven days.

17. Insure CGC power has been on at least 2 hours before proceeding.

18. Set CTS Frequency Counter switches as follows:

a. FUNCTION to FREQ

b. INPUT VOLTS RMS to 6.4

c. SLOPE to +

d. GATE to OPEN

e. TRIGGER LEVEL to CENTER

19. Set FREQ-TIME switch on Frequency Counter to 100-second position (first setting from fully counterclockwise).

DATE ________

---

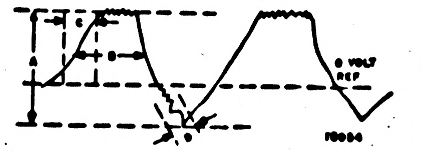
20. Connect plug P6 of cable W259 (2014470-011) to plug P4 of cable W232, and plug P1 of cable W259 to CNTR A connector on CTS Console. Connect a jumper from CNTR A connector on CTS INTERFACE SIGNALS patchboard to FREQ A AC connector on CTS Frequency Counter.

21. Select INPUT VOLTS RMS switch position on Frequency Counter where TRIGGER LEVEL can be properly adjusted. Set TRIGGER LEVEL to center of counting range. Set GATE switch to AUTO. Insure that printer power is on and printer is in record mode. Count output frequency in cps for 15 minutes and record data from printout.

22. Disconnect plug P1 of cable W259 from CNTR A connector and connect P1 to CLOCK (BNC) connector on INTERFACE SIGNALS patchboard on CTS.

23. Connect jumper from CLOCK connector on INTERFACE SIGNALS patchboard to either 1 MEG input channel on CTS Oscilloscope. Insure that all other jumpers are disconnected from CLOCK connectors.

24. Measure and record following characteristics on CTS Oscilloscope:



A. Amplitude, volts peak-to-peak

B. Width at 50% of amplitude

C. Rise time at 10% to 90% amplitude

D. Noise

25. Perform following DSKY operations:

a. Press and hold PRO (or STBY) pushbutton until indicator goes out. If STBY indicator does not go out within 5 seconds, release and press pushbutton again. If PRO (or STBY) pushbutton is pressed more than once, record in system log the number of times pressed.

b. Press RSET pushbutton.

c. VERB 61 ENTR

d. VERB 36 ENTR

e. Press ALARM RESET pushbutton on CTS Programmer and Monitor panel.

+4 VDC CGC POWER SUPPLY

26. Set CROSSBAR CONTROL to 194. Measure and record voltage indicated on DVM. Use Oscilloscope to measure noise present on +4 vdc supply voltage. Record.

+14 VDC CGC POWER SUPPLY

27. Set CROSSBAR CONTROL to 293. Measure and record voltage indicated on DVM. Use Oscilloscope to measure the noise present on +14 vdc supply voltage. Record.

CGC VOLTAGE MARGIN TEST

28. Press to light INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel.

29. Set AGC VOLTAGE 1 and 2 controls on CTS Power Control panel to midrange and CONTROL 1 and CONTROL 2 switches to ON.

DATE ________

NOTE: If CONTROL 1 does not vary voltage during performance of step 30, set CONTROL 1 switch to OFF; rotate CONTROL 1 fully counterclockwise and back to midrange; set CONTROL 1 switch to ON, and then readjust.

30. Set VOLTAGE SELECT switch to AGC (+4V) +3V and adjust CONTROL 1 until digital voltmeter on Power Control panel indicates 4.0 (±0.20) vdc.

NOTE: If CONTROL 2 does not vary voltage during performance of step 31, set CONTROL 2 switch to OFF; rotate CONTROL 2 fully counterclockwise and back to midrange; set CONTROL 2 switch to ON, and then readjust.

31. Set VOLTAGE SELECT switch to AGC (+14V) +13V and adjust CONTROL 2 until Meter on Power Control panel indicates 14.0 (±0.40) vdc.

32. Perform following DSKY operations:

a. VERB 21 NOUN 27 ENTR
b. 77767 ENTR

33. Set CROSSBAR CONTROL to 194 to monitor +4 vdc CGC power supply voltage on DVM.

34. Use CONTROL 1 to adjust +4 vdc CGC power supply voltage to 3.40 vdc. Use CONTROL 2 to adjust +14 vdc CGC power supply voltage to 12.1 vdc and to 16.4 vdc. Use CONTROL 1 again to adjust +4 vdc power supply to 4.60 vdc. Use CONTROL 2 to adjust +14 vdc power supply to 12.1 vdc and then to 16.4 vdc. No computer failures shall occur. Record.

CGC VOLTAGE FAIL ALARM LIMITS

35. Use CONTROL 1 to set +4 vdc CGC power supply voltage to 4.0 (±0.20) vdc. Use CONTROL 2 to set +14 vdc CGC power supply voltage to 14.0 (±0.40) vdc.

36. Press to extinguish INHIBIT COMPUTER POWER FAIL pushbutton on Test Control panel.

NOTE: Failure indications in step 37 will occur only with MAIN DSKY installed for test or with cable W160-P3 connected to DSKY.

37. Monitor CGC/LGC WARNING NO. 1 lamp on Monitor panel and adjust CONTROL 1 and CONTROL 2 to set +4 and +14 vdc CGC power supplies to values specified below. At each step, a CGC/LGC WARNING NO. 1 shall occur. Record. (Other failure indications may also occur but are to be ignored.) Return both power supplies to nominal values after each step and press RSET pushbutton on

DATE ______

DSKY. All alarms shall go out within 60 seconds.

a. 3.5 vdc and 14.0 vdc
b. 4.6 vdc and 14.0 vdc
c. 4.0 vdc and 16.4 vdc
d. 4.0 vdc and 12.2 vdc

38. Set CONTROL 1 and CONTROL 2 switches to OFF.

39. Perform following DSKY operations:

a. VERB 21 NOUN 27 ENTR
b. +00000 ENTR

BMAG ATTITUDE SIGNALS

40. Perform following DSKY operations:

a. VERB 21 NOUN 10 ENTR
b. 00013 ENTR
c. 00200 ENTR
d. VERB 25 NOUN 01 ENTR
e. 00042 ENTR

g. 77777 ENTR
h. 77777 ENTR
i. VERB 15 NOUN 01 ENTR
j. 00042 ENTR
k. Observe
77777 is displayed in Rows 1, 2 and 3

41. Press SINGLE PULSE pushbutton on XY Interface panel. SINGLE PULSE shall light.

42. Set AGC INPUT COUNTERS selector to 6 and press POSITIVE pushbutton. POSITIVE shall light.

43. Press SINGLE PULSE pushbutton. After COMP ACTY lamp on DSKY flashes on and off, Row 1 display shall change to 00001. Continue actuating SINGLE PULSE pushbutton waiting until COMP ACTY lamp flashes to allow DSKY display to change. Row 1 shall count 00001, 00002, 00003, 00004, 00005, 00006, 00007, 00010 and 00011.

44. Press POSITIVE and NEGATIVE pushbuttons. POSITIVE shall go out and NEGATIVE shall light.

45. Actuate SINGLE PULSE pushbutton as described in step 43. Row 1 shall count 00011, 00010, 00007, 00006, 00005, 00004, 00003, 00002, 00001, 77777, 77776, 77775, 77774, 77773, 77772, 77771, 77770, 77767, and 77766.

46. Set AGC INPUT COUNTERS selector to 7 and press POSITIVE and NEGATIVE pushbuttons. POSITIVE shall light and NEGATIVE shall go out.

47. Repeat steps 43 through 45 except observe DSKY Row 2 for proper indications.

48. Set AGC INPUT COUNTERS selector to 8 and press POSITIVE and NEGATIVE pushbuttons. POSITIVE shall light and NEGATIVE shall go out.

49. Repeat steps 43 through 45 except observe DSKY Row 3 for proper indications.

50. Perform following DSKY operations:

a. VERB 36 ENTR
b. KEY REL indicator may flash; press KEY REL pushbutton
c. VERB 25 NOUN 01 ENTR
d. 00042 ENTR

DATE ______

---

e. 00000 ENTR
f. 00000 ENTR
g. 00000 ENTR

51. Insure PSA HTR PWR lamp on Temperature Monitor Control panel is lighted.

52. Set CROSSBAR CONTROL to 175. Adjust G & N POWER ADJUST control until DVM indicates 28.8 (±0.25) vdc. Record indication.

IMU TIME DELAY

53. Perform following DSKY operations:

a. VERB 36 ENTR
b. VERB 11 NOUN 10 ENTR
c. 00012 ENTR

54. Set Counter switches and control as follows:

a. DISPLAY RESET to ZERO
b. CLOCK FREQUENCY DIVIDER to 10^4
c. CLOCK SELECTOR to INT
d. INPUT SELECTOR to C SENSE
e. SENSE SELECTOR to FWD
f. FUNCTION to COUNT

55. Set CROSSBAR CONTROL to 259.

56. Simultaneously press RESET pushbutton on Counter and PROCEED/ISS OPERATE pushbutton on Test Control panel. NO ATT lamp on DSKY shall light. Observe absence of +120 vdc on DVM.

57. Set FUNCTION selector on Counter to OFF immediately after DSKY display changes from 00030 to 40000 and observe voltage on DVM indicates +120 vdc within 10 seconds. NO ATT lamp on DSKY shall go out.

58. Record time displayed on Counter.

59. Perform following DSKY operations:

a. VERB 40 NOUN 20 ENTR
b. Wait 5 seconds
c. VERB 36 ENTR
d. VERB 41 NOUN 20 ENTR
e. Observe
VERB 21 NOUN 22 Flashing

j. +09000 ENTR
k. Observe
NO ATT lamp lights
GIMBAL LOCK lamps on DSKY and Monitor panel light

60. Perform following DSKY operations:

a. VERB 06 NOUN 20 ENTR
b. Observe
Row 1 indicates approximately +0900
Row 2 indicates approximately +0900
Row 3 indicates approximately +0900

NOTE: PROG alarm on DSKY may light during performance of step 61. Ignore alarm.

61. Press PROCEED/ISS STANDBY pushbutton on Test Control panel. ISS OPERATE shall go out and ISS STANDBY shall remain lighted.

DATE ______

TURN ON CAGE TEST

62. Perform following DSKY operations:

a. VERB 11 NOUN 10 ENTR
b. 00012 ENTR

63. Insure PROCEED portion of PROCEED/ISS OPERATE pushbutton is lighted. Press PROCEED/ISS OPERATE pushbutton. ISS OPERATE shall light and ISS STANDBY shall go out. NO ATT lamp on DSKY shall light.

64. After DSKY display changes from 00030 to 40000 to 00000, perform following DSKY operations:

a. VERB 16 NOUN 20 ENTR

65. Record OG, MG, and IG positions indicated on Gimbal Position Control panel and DSKY. All axes shall indicate approximately 000.00°.

TEMP MON 1 THERMISTOR

66. Measure temp mon 1 thermistor resistance across pins TB5-14 and TB5-15 of TPA #2. Use 10K ohm resistor in series with one of the measuring probes. Subtract 10K ohms from measured resistance. Record result.

67. Press PROCEED/ISS STANDBY pushbutton. ISS STANDBY shall light and ISS OPERATE shall go out.

68. Perform following JDC's in the order listed:

a. JDC 12206
b. JDC 12209
c. JDC 12210

69. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON shall light.

70. Insure PROCEED portion of PROCEED/ISS OPERATE pushbutton is lighted. Press PROCEED/ISS OPERATE pushbutton. ISS OPERATE shall light.

71. Set CROSSBAR CONTROL to positions listed below and measure signals on DVM. Measure peak-to-peak noise of steps c and d on Oscilloscope. Record all indications.

Step	Signal	CROSSBAR CONTROL
a.	-28 vdc	124
b.	+28 vdc computer TP	193
c.	CGC +4 vdc	194
d.	CGC +14 vdc	293
e.	120 vdc PIP	259

72. Set CROSSBAR CONTROL to 299, connect direct probes on TPA #2 to terminals listed below, and measure signals on DVM. Record indications.

Step	Signal	TPA #2 Terminals
a.	CGC +4 vdc	TB2-27 (hi) and TB2-25 (lo)
b.	CGC +14 vdc	TB2-26 (hi) and TB2-25 (lo)
c.	+28 vdc computer TP	TB2-28 (hi) and TB2-25 (lo)

73. Set Counter switches and controls as follows:

a. DISPLAY TIME (N_2) to 10^5
b. DISPLAY RESET to ZERO

DATE ______

c. CLOCK FREQUENCY DIVIDER to 10

d. CLOCK SELECTOR to INT

e. INPUT SELECTOR to C SENSE

f. SENSE SELECTOR to FWD

g. TRIGGER VOLTAGE ATTEN D to 10 AC

h. TRIGGER VOLTAGE fully counterclockwise

i. SAMPLE TIME (N_1) to 008000

j. FUNCTION to RATIO OR PERIOD

74. Insure D SIGNAL portion of D SIGNAL/D PULSE pushbutton on Primary Signal Selector panel is lighted. Set COUNTER INPUT "D" SIGNAL selector to 1.

75. Adjust TRIGGER VOLTAGE ATTEN D selector on Counter to highest attenuation level that causes triggering. Set TRIGGER VOLTAGE control to insure Counter starts and stops in approximately 10 seconds. Counter shall indicate approximately 100000.

76. Set COUNTER INPUT "D" SIGNAL selector on Primary Signal Selector panel and SAMPLE TIME (N_1) on Counter as listed below and measure frequencies of each signal. Record each counter indication.

Step	Signal	COUNTER INPUT "D" SIGNAL Selector	SAMPLE TIME (N_1)
a.	IMU 28 v 800 cps 1%	1	008000
b.	Optics 28 v 800 cps 1%	2	008000
c.	28 v 3200 cps feedback	5	032000
d.	115 v 400 cps	7	004000

LOW BUS VOLTAGE

77. Set CROSSBAR CONTROL to 175. Adjust G & N POWER ADJUST control until DVM indicates 25.8 (+0.25, −0.0) vdc.

78. Repeat steps 71 through 76 with following exceptions:

a. Step 71 measure items c and d only

b. Step 72 measure items a and b only

c. Step 76 measure items a, b and c only

HIGH BUS VOLTAGE

79. Set CROSSBAR CONTROL to 175. Adjust G & N POWER ADJUST control until DVM indicates 31.8 (+0.0, −0.25) vdc.

80. Repeat steps 71 through 76 with following exceptions:

a. Step 71 measure items c and d only

b. Step 72 measure items a and b only

c. Step 76 measure items a, b, and c only

NORMALIZATION OF SYSTEM

81. Set CROSSBAR CONTROL to 220. Adjust G & N POWER ADJUST control until DVM indicates 28.0 (±0.25) vdc. Record indication.

CGC +4 VDC CONTROL 1 (ACE)

82. Set CROSSBAR CONTROL to 194. Measure and record voltage indicated on DVM.

83. Press INTERFACE LOAD TEST pushbutton on Test Selector panel. INTERFACE LOAD TEST shall light.

84. Set INTERFACE LOAD TEST selector to 7.

85. Press TEST START pushbutton. TEST START shall light.

86. Measure and record voltage indicated on DVM.

DATE ________

---

87. Press TEST STOP pushbutton. TEST START shall go out.

88. Calculate CGC +4 vdc voltage change.

CGC +14 VDC CONTROL 2 (ACE)

89. Set CROSSBAR CONTROL to 293. Measure and record voltage indicated on DVM.

90. Press INTERFACE LOAD TEST pushbutton. INTERFACE LOAD TEST shall light.

91. Set INTERFACE LOAD TEST selector to 8.

92. Press TEST START pushbutton. TEST START shall light.

93. Measure and record voltage indicated on DVM.

94. Press TEST STOP pushbutton. TEST START shall go out. Press to extinguish INTERFACE LOAD TEST pushbutton.

95. Calculate CGC +14 vdc voltage change.

96. Perform following JDC's in the order listed:

a. JDC 12218

b. JDC 12221

JOB RETEST PROCEDURES FOR DSKY

INITIAL TDRR 36995 D.S. PGS 2

SUBSYSTEM G AND N SYSTEM

ASSY.

DESCRIPTION This JDC provides the retests required to demonstrate the integrity of a replacement DSKY in a G & N System configuration.

Rev. Let.	Date	TDRR NO.	PAGES REVISED		APPROVAL	
			JDC	D.S.	MIT	NASA

REFERENCES ND 1021043

IMPORTANT See below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: Insure that cable W226-P1 is removed and connector assembly (2003099) is connected to CGC test connector before proceeding with this JDC.

NOTE: If VERB display on DSKY contains a number from 11 through 17, KEY REL may flash when DSKY entries are made.

A. PREPARATION

DOWNMODE

1. Downmode the system to OIA ON in accordance with JDC 12204.

DSKY REMOVAL

2. Disconnect and remove DSKY that is to be replaced in accordance with JDC 17104.

INSPECTION

3. Inspect replacement DSKY as follows and record observed indications:

a. Inspection status indicators such as tags and stamps to insure all respective subassembly requirements have been met.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE ______

JOB RETEST PROCEDURES FOR DSKY | JDC 12287 REV - PAGE 2 OF 3

SUBSYSTEM G AND N SYSTEM | ASSY

b. Harnesses for nicks, scratches, wire abrasions, loose lacing, dents, incapsulant defects, and pin condition.

c. Mating surfaces for cracks and foreign material.

d. Markings for legibility, appearance, and proper registration.

e. Surfaces for scratches, dents, nicks, or other obvious defects.

f. All potting material for condition.

g. All plugs and jacks for pin condition.

INSTALLATION

4. Install replacement DSKY in accordance with JDC 17104.

TURNON

5. Perform following JDC's in the order listed:

a. JDC 12202

b. JDC 12203

6. Perform JDC 12215 to establish a Master Initialization condition, then place system in ISS STANDBY mode in accordance with JDC 12204.

7. Insure STBY indicator on DSKY is not lighted. If lighted, press and hold PRO (or STBY) pushbutton until indicator goes out. If STBY indicator does not go out within 5 seconds, release and press pushbutton again. If PRO (or STBY) pushbutton is pressed more than once, record in system log the number of times pressed. Press ALARM RESET pushbutton on CTS Programmer and Monitor panel.

B. PROCEDURE

8. Perform following DSKY operations:

a. VERB 36 ENTR

b. VERB 60 ENTR

c. Press and hold PRO (or STBY) pushbutton until STBY indicator lights.

d. Observe

NO ATT and TEMP indicators are lighted.

9. Perform following DSKY operations:

a. Press and hold PRO (or STBY) pushbutton until STBY indicator goes out.

b. Press RSET pushbutton.

c. VERB 61 ENTR

d. VERB 36 ENTR

10. Press ALARM RESET pushbutton on Programmer and Monitor panel of CTS.

11. Insure G & N Mounting Fixture cradle assembly is at 32.5°.

12. Perform following DSKY operations:

a. VERB 36 ENTR

b. VERB 21 NOUN 27 ENTR

c. 00011 ENTR

13. Verify that all 9's are displayed in the PROG, VERB, NOUN, and Row 1, Row 2, and Row 3 character positions. Check that all applicable electroluminescent elements are lighted. Including the 9's, the following shall be displayed for approximately 5 seconds:

a. 9's

b. 8's

c. 7's

d. 6's

IMPORTANT
See below

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: 1. Avoid slewing SXT shaft and trunnion axes into their mechanical stops. 2. Insure that cable W226-P1 is removed and connector assembly (2003099) is connected to CGC test connector before performing retest.
NOTE: If VERB display on DSKY contains a number from 11 through 17, KEY REL may flash when DSKY entries are made.

A. PREPARATION

DOWNMODE

1. Downmode system to OIA ON in accordance with JDC 12204.

G & N INTERCONNECTION HARNESS F REMOVAL

2. Disconnect and remove G & N Interconnection Harness F that is to be replaced in accordance with JDC 17104.

INSPECTION

3. Inspect replacement G & N Interconnection Harness F as follows and record observed indications:

a. Inspection status indicators such as tags and stamps to insure all respective subassembly requirements have been met.

VERIFICATION WITH SIDL REQUIRED BEFORE USE DATE ______

---

b. Harnesses for nicks, scratches, wire abrasions, loose lacing, dents, incapsulant defects, and pin condition.
c. Mating surfaces for cracks and foreign material.
d. Markings for legibility, appearance, and proper registration.
e. Surfaces for scratches, dents, nicks, or other obvious defects.
f. All potting material for condition.
g. All plugs and jacks for pin condition.

INSTALLATION

4. Install replacement G & N Interconnection Harness F in accordance with JDC 17104.

TURNON

5. Perform following JDC's in the order listed:
a. JDC 12202
b. JDC 12203

6. Perform JDC 12215 to establish a Master Initialization condition, then place system in ISS STANDBY mode in accordance with JDC 12204.

7. Insure STBY indicator on DSKY is not lighted. If lighted, press and hold PRO (or STBY) pushbutton until indicator goes out. If STBY indicator does not go out within 5 seconds, release and press pushbutton again. If PRO (or STBY) pushbutton is pressed more than once, record in system log the number of times pressed. Press ALARM RESET pushbutton on CTS Programmer and Monitor panel.

B. PROCEDURE

8. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON shall light.

9. Set CROSSBAR CONTROL on Primary Signal Selector panel to 174. Adjust G & N POWER ADJUST control on Test Control panel until DVM indicates 28.0 (±0.25) vdc.

10. Set CROSSBAR CONTROL on Primary Signal Selector panel to positions listed below and measure corresponding signals on DVM. Record DVM indications.

Step	Signal	CROSSBAR CONTROL
a.	28 vdc optics	200
b.	Optics 28 v 800 cps 1%	101

11. Set CROSSBAR CONTROL to 199. Connect buffered probes to TPA #2 terminals listed below and measure corresponding signal on DVM. Record DVM indication:

Step	Signal	TPA #2 Terminals
a.	Optics 800 cps 5%	TB5-35 (hi) and TB5-48 (lo)

NOTE: Step 12 applies to Indicator Control panel 2021290 only.

DATE ______

---

12. Set switches on Indicator Control panel as follows:
a. OPTICS ZERO to OFF, then to ZERO for a minimum of 20 seconds, and return to OFF.
b. OPTICS TEL TRUN to SLAVE TO SXT
c. OPTICS COUPLING to DIRECT
d. OPTICS MODE to MAN
e. OPTICS SPEED to HI

NOTE: Step 13 applies to all Indicator Control panels except 2021290.

13. Set switches on Indicator Control panel as follows:
a. OPTICS MODE to MAN, then to ZERO for a minimum of 20 seconds, and return to MAN.
b. OPTICS CONTROLLER SPEED to HI.
c. OPTICS CONTROLLER COUPLING to DIRECT.
d. OPTICS TRACKER to OFF.
e. OPTICS TELESCOPE TRUNNION to SLAVE TO SXT.

14. Set CROSSBAR CONTROL to 202 and monitor SCT Trunnion MDA Output Mon. #1 on Oscilloscope A.

15. Measure and record steady state peak-to-peak voltage indicated on Oscilloscope after initial acceleration transient while holding Optics Hand Controller to upper limit not longer than 10 seconds. Release Optics Hand Controller.

16. Set CROSSBAR CONTROL to 110 and monitor SCT Shaft MDA Output Mon. #1 on Oscilloscope A.

17. Measure and record steady state peak-to-peak voltage indicated on Oscilloscope after initial acceleration transient while holding Optics Hand Controller to right limit not longer than 10 seconds. Release Optics Hand Controller.

18. Using Optics Hand Controller, position the SXT trunnion axis between 0° and 10° as indicated by Trunnion TPAC.

NOTE: Step 19 applies to Indicator Control 2021290 only.

19. Set OPTICS ZERO switch on Indicator Control panel to ZERO.

NOTE: Step 20 applies to all Indicator Control panels except 2021290.

20. Set OPTICS MODE switch on Indicator Control panel to ZERO.

21. When all signals reach steady state values, perform following DSKY operations:
a. VERB 06 NOUN 55 ENTR
b. Record Row 1 and Row 2 indications.

NOTE: Step 22 applies to Indicator Control panel 2021290 only.

22. Set OPTICS ZERO switch to OFF.

NOTE: Step 23 applies to all Indicator Control panels except 2021290.

23. Set OPTICS MODE switch to MAN.

DATE ______

---

24. Set CROSSBAR CONTROL on Primary Signal Selector panel to 105 to monitor SCT trunnion MDA tach mon on PAVM.

25. Measure and record voltage indicated on PAVM while holding Optics Hand Controller to upper limit not longer than 20 seconds. Release Optics Hand Controller.

26. Set CROSSBAR CONTROL to 204 to monitor SCT shaft MDA tach mon on PAVM.

27. Measure and record voltage indicated on PAVM while holding Optics Hand Controller to right limit not longer than 20 seconds. Release Optics Hand Controller.

28. Using Optics Hand Controller, position SXT trunnion axis between 0° and 10° as indicated by Trunnion TPAC.

NOTE: Step 29 applies to Indicator Control panel 2021290 only.

29. Set OPTICS ZERO switch to ZERO. After approximately 20 seconds, set OPTICS ZERO switch to OFF.

NOTE: Step 30 applies to all Indicator Control panels except 2021290.

30. Set OPTICS MODE switch to ZERO. After approximately 20 seconds, set OPTICS MODE switch to MAN.

31. Set CROSSBAR CONTROL to positions listed below and measure and record total and in-phase voltage of each corresponding voltage on PAVM:

Step	CROSSBAR CONTROL	Signal
a.	205	Shaft fine error
b.	206	Trun fine error

32. Rotate RETICLE BRIGHTNESS control on Indicator Control panel fully downward.

33. Rotate RETICLE BRIGHTNESS control upward while observing SCT reticle pattern and SCT TPAC. Verify that reticle and TPAC lamps vary from dim to bright as control is rotated.

34. Press OPTICS POWER ON pushbutton on Test Control panel. OPTICS POWER ON shall go out.

TOOLS AND MATERIAL

IMPORTANT: Insure that the LEM G & N System has been finished in a thorough workmanship like manner, without subassembly separation.

PROCEDURE

1. Inspect the following equipment in accordance with step 2 without G & N System subassembly separation.

NOTE: If continuing from ISS Testing inspect items e, f, g, h, and i only.

a. Inertial Measurement Unit
b. Pulse Torque Assembly
c. Coupling Display Unit
d. Power Servo Assembly
e. LEM Guidance Computer
f. LEM DSKY
g. Computer Control and Reticle Dimmer Assembly
h. "A" Harness Assembly

NOTE: In handling microdot connectors, observe the following precautions. At all times, keep in mind the fact that microdot connectors have a locking action which is opposite to that of most electrical connectors; that is, the locking ring is NOT free to rotate when the plug and receptacle are NOT engaged.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 18 JAN 66

JOB LEM G & N SYSTEM VISUAL INSPECTION | **JDC** 12600 **REV** C **PAGE** 2 **OF** 3

SUBSYSTEM LEM G & N SYSTEM | **ASSY**

1. When the plug is disengaged from the receptacle, the ENGAGE marks on the locking ring and main connector body should be aligned and the locking ring should be immovable under light pressure. (If the ENGAGE marks are not aligned at disengagement and/or the locking ring can be rotated, the connector is defective.)

2. The plug is mated to the receptacle using straight-line, push-in, hand pressure. Full engagement is indicated by an audible click. After engagement, the locking ring should be free to rotate 1/8 turn to lock position when the plug and receptacle are aligned. (If the ring cannot be rotated, the plug and receptacle are not fully engaged. If the connection does not hold with the ring in the LOCK position, the connector is defective.)

3. Connectors are disengaged using special tool FA 757702-006 or special tool FA 757702-007. The locking ring is rotated from LOCK to ENGAGE and the finger blade(s) of the tool are inserted between plug and receptacle. Pressure on the tool handle(s) forces connectors apart. Manual disconnection is not recommended since connector damage may result. (If the connector halves can be separated without rotating the ring to ENGAGE or if the ring will not rotate from LOCK to ENGAGE, the connector is defective.)

4. Protective covers for exposed microdot connectors are inserted by hand pressure but should be removed using special connector cover removal tool FA 757702-005.

i. "B" Harness Assembly

2. Record the indications resulting from the following inspections performed on the equipment called out in step 1.

a. Insure that all units have met their respective subassembly requirements by a review of inspection status indications such as tags and stamps.
b. Harness for nicks, scratches, wire abrasions, loose lacing, burrs, dents, encapsulant defects, and pin condition.
c. Mating surfaces for cracks and foreign material.

DATE 18 JAN 66

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: Insure that the LEM G & N System has been finished in a thorough workmanship like manner, without subassembly separation.

PROCEDURE

1. Inspect the following equipment in accordance with step 2 without G & N System subassembly separation.

NOTE: If continuing from ISS Testing inspect items e, f, g, h, and i only.

a. Inertial Measurement Unit
b. Pulse Torque Assembly
c. Coupling Display Unit
d. Power Servo Assembly
e. LEM Guidance Computer
f. LEM DSKY
g. Computer Control and Reticle Dimmer Assembly
h. "A" Harness Assembly
i. "B" Harness Assembly

2. Record the indications resulting from the following inspections performed on the equipment called out in step 1.

a. Insure that all units have met their respective subassembly requirements by a review of inspection status indications such as tags and stamps.
b. Harness for nicks, scratches, wire abrasions, loose lacing, burs, dents, encapsulant defects, and pin condition.
c. Mating surfaces for cracks and

ASSY

foreign material.

d. Markings for legibility, appearance and proper registration.
e. Surfaces for scratches, dents, nicks or other obvious defects.
f. All potting material for condition.
g. All plugs and jacks for pin conditions.

G & N SYSTEM TEST TIME

3. Observe and record the following ETI readings indicated on the Power Supply Load Panel:

a. ISS
b. Wheel
c. LGC

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

PROCEDURE

1. Purge and fill LGC Cold Plate using the filling and Purging Fixture.
2. Install the LGC on the LGC Cold Plate of the Component Mounting Plate.

   NOTE: Insure screws are tightened evenly to provide good contact between the LGC Header and the LGC Cold Plate.
3. Insert mounting screws and tighten to 60-75 inch-pounds. (14 screws 1/4-28 x 1, P/N MS 16996-24 and 28 washers P/N AN960C416L or equivalent.)

IMPORTANT. See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT

Refer to JDC 18100 for lubrication instructions prior to engaging any screw or bolt into header helicoil inserts, and for helicoil insert cleaning instructions after all testing has been completed or prior to spacecraft installation.

PROCEDURE

1. Carefully lay the "A" Harness Assembly in position on the Subsystem Mounting Fixture Component Mounting Plate.

> CAUTION: Extreme care must be exercised when connecting harness connectors to component connectors to prevent pin and jack damage.

2. Visually inspect connectors 56P2, 56P3, 45J19, and 40J53 to insure that pins and sockets are not bent or damaged.

3. Install gasket on PSA connector 45J19. (Gasket FC 757926 or equivalent)

4. Carefully locate harness plug 56P2 on the guide pins of PSA connector 45J19, ease plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

5. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

6. On the sides of the harness plug, tighten the two captive screws and torque to 19±1 in-lbs.

JOB "B" HARNESS INSTALLATION | JDC 12606 REV F PAGE 2 OF 3

SUBSYSTEM LEM G & N SYSTEM | ASSY

NOTE: When mating a microdot connector plug to a receptacle, observe the following procedures to avoid possible damage to the connectors. Microdot connectors have a locking action which is opposite to that of most electrical connectors; that is, the locking ring is NOT free to rotate when the plug and receptacle are NOT engaged.

1. Inspect the plug to make sure that the scribe mark next to the word ENGAGE on the locking ring is aligned with the scribe mark on the main body of the connector. Use light finger pressure to assure that the ring does NOT freely rotate from ENGAGE to LOCK position.

2. With the connector aligned to the receptacle along the insertion axis, as indicated by position lines, and with side forces relieved (which may require grasping harness with free hand), hold locking ring of plug between thumb and forefinger. Press into receptacle. When the connectors are fully engaged, an audible click will be heard.

3. Check retention by grasping locking ring between thumb and forefinger and exerting a moderate pull force. If the connectors disengage, improper mating is indicated.

4. Use fingertip pressure to rotate the locking ring from ENGAGE to LOCK position when the connectors are fully mated. Check locking action by exerting a light pull on the connector. When disengaging microdot connectors, observe the following procedures to avoid damage to the plug or receptacle.

5. Grasp locking ring and rotate from LOCK to ENGAGE position (scribe mark next to word LOCK on locking ring aligned with scribe mark on main body of connector).

CAUTION: Always use disengagement tool specified in following step. Manual disengagement may cause connector damage.

6. Insert the finger part of

DATE 18 JAN 66

JOB "B" HARNESS INSTALLATION | JDC 12606 REV F PAGE 3 OF 3

SUBSYSTEM LEM G & N SYSTEM | ASSY

special tool FA 757702-007 between the facing surfaces of the plug and receptacle. Insert tool to full engagement position for maximum leverage. Grasp tool handle and rotate in an arc about the axis perpendicular to the connector axis to disengage connectors.

3. Visually inspect connectors 56P19, J19 on PTA, 56P20, and 35A1J2 on IMU to insure that pins and sockets are not bent or damaged.

4. Install gasket on J19 of PTA. (Gasket FC 757924 or equivalent)

5. Carefully locate harness plug 56P19 on the guide pins of the PTA connector J19, ease plug onto the connector maintaining parallelism between plug and connector as closely as possible, and engage the four corner jackscrews until finger tight.

6. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19 ± 1 in-lbs.

7. On the side of the harness plug, tighten the two captive screws and torque to 19 ± 1 in-lbs.

8. Carefully connect harness plug 56P20 to IMU connector 35A1J2.

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: The G & N System must be handled and installed with extreme care since it contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. The proper installation procedure and sequence is required to prevent possible damage or degradation of G & N system and components.

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. All tools shall be in proper operating condition.

4. A thorough visual examination of all equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment as well as to cable bundles, harnesses and connectors.

B. PREPARATIONS

1. Insure that all JDC's necessary to perform the desired testing are available. Record on data sheet.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 15 MAR 66

JDC 12607 REV A PAGE 2 OF 7

SUBSYSTEM LEM G & N SYSTEM

ASSY

2. Insure that all items of test equipment have been calibrated and adjusted in accordance with the applicable Quality Assurance Implementation Plan. Record on data sheet.

3. Insure that G & N System power cable W137 is disconnected.

C. PROCEDURES

1. Place Prime Power Circuit breaker located on the back of the OIA console to OFF.

2. Insure that cables W120, W132, W134, W141 and W135 are attached to the Boom.

3. Insure that the cables listed in Table 1 are connected. (Exceptions noted). (See Figure 1.)

The following JDC's are to be used if operating procedures for GSE Commercial test equipment are required during use of all JDC's necessary to perform the desired testing.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: The G & N System must be handled and installed with extreme care since it contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. The proper installation procedure and sequence is required to prevent possible damage or degradation of G & N system and components.

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. All tools shall be in proper operating condition.

4. A thorough visual examination of all equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment as well as to cable bundles, harnesses and connectors.

B. PREPARATIONS

1. Insure that all JDC's necessary to perform the desired testing are available. Record on data sheet.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

---

2. Insure that all items of test equipment have been calibrated and adjusted in accordance with the applicable Quality Assurance Implementation Plan. Record on data sheet.

3. Insure that G & N System power cable W137 is disconnected.

C. PROCEDURES

1. Place Prime Power Circuit breaker located on the back of the OIA console to OFF.

2. Insure that cables W120, W132, W134, W141 and W135 are attached to the Boom.

3. Insure that the cables listed in Table 1 are connected. (Exceptions noted). (See Figure 1.)

The following JDC's are to be used if operating procedures for GSE Commercial test equipment are required during use of all JDC's necessary to perform the desired testing.

INDEX FOR COMMERCIAL EQUIPMENT JDC OPERATING INSTRUCTIONS

IMPORTANT See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT: The G & N System must be handled and installed with extreme care since it contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. The proper installation procedure and sequence is required to prevent possible damage or degradation of G & N system and components.

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. All tools shall be in proper operating condition.

4. A thorough visual examination of all equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment as well as to cable bundles, harnesses and connectors.

B. PREPARATIONS

1. Insure that all JDC's necessary to perform the desired testing are available. Record on data sheet.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 15 MAR 66

JOB PREPARE GSE FOR LEM G & N SYSTEM TESTING

SUBSYSTEM LEM G & N SYSTEM
ASSY

2. Insure that all items of test equipment have been calibrated and adjusted in accordance with the applicable Quality Assurance Implementation Plan. Record on data sheet.

3. Insure that G & N System power cable W137 is disconnected.

C. PROCEDURES

1. Place Prime Power Circuit breaker located on the back of the OIA console to OFF.

2. Insure that cables W120, W132, W134, W141 and W135 are attached to the Boom.

3. Insure that the cables listed in Table 1 are connected. (Exceptions noted). (See Figure 1.)

The following JDC's are to be used if operating procedures for GSE Commercial test equipment are required during use of all JDC's necessary to perform the desired testing.

INDEX FOR COMMERCIAL EQUIPMENT JDC OPERATING INSTRUCTIONS

Equipment Nomenclature	JDC Description	JDC Number
Auxiliary input panel	Applying auxiliary signals to digital voltmeter, phase angle voltmeter, dual beam oscilloscope, and counter	18103
	Applying PSA test point adapter and PTA/PEA test point adapter signals to dual beam oscilloscope	18204
	Applying PSA test point adapter signals to dual beam oscilloscope	18104
	Operation - general	18050
Counter	Applying auxiliary signals	18103
	Count clock frequency pulses that occur during interval determined by "D" input events	18020

F	8-10-67	34339	8, 9, 10	-	EA	-	INTERVAL
							TOOLS AND MATERIAL

IMPORTANT: The G & N System must be handled and installed with extreme care since it contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. The proper installation procedure and sequence is required to prevent possible damage or degradation of G & N system and components.

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. All tools shall be in proper operating condition.

4. A thorough visual examination of all equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment as well as to cable bundles, harnesses and connectors.

B. PREPARATIONS

1. Insure that all JDC's necessary to perform the desired testing are available. Record on data sheet.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

DATE 15 MAR 66

JOB PREPARE GSE FOR LEM G & N SYSTEM TESTING | JDC 12607 REV F PAGE 2 OF 10

SUBSYSTEM LEM G & N SYSTEM | ASSY

2. Insure that all items of test equipment have been calibrated and adjusted in accordance with the applicable Quality Assurance Implementation Plan. Record on data sheet.

3. Insure that G & N System power cable W137 is disconnected.

C. PROCEDURES

1. Place Prime Power Circuit breaker located on the back of the OIA console to OFF.

2. Insure that cables W120, W132, W134, W141 and W135 are attached to the Boom.

3. Insure that the cables listed in Table 1 are connected. (Exceptions noted). (See Figure 1.)

The following JDC's are to be used if operating procedures for GSE Commercial test equipment are required during use of all JDC's necessary to perform the desired testing.

INDEX FOR COMMERCIAL EQUIPMENT JDC OPERATING INSTRUCTIONS

Equipment Nomenclature	JDC Description	JDC Number
Auxiliary input panel	Applying auxiliary signals to digital voltmeter, phase angle voltmeter, dual beam oscilloscope, and counter	18103
	Applying PSA test point adapter and PTA/PEA test point adapter signals to dual beam oscilloscope	18204
	Applying PSA test point adapter signals to dual beam oscilloscope	18104
	Operation - general	18050
Counter	Applying auxiliary signals	18103
	Count clock frequency pulses that occur during interval determined by "D" input events	18020
	Count number of input events that occur during any preselected time interval	18018
	Count number of input events that occur during interval determined by "D" input events	18019
	Determine correct operation of N_1 switches, time base circuitry, and count-chain circuitry	18021

							TOOLS AND MATERIAL

IMPORTANT: The G & N System must be handled and installed with extreme care since it contains delicate, sensitive instruments and has critical mounting surfaces and vulnerable connector pins and sockets. The proper installation procedure and sequence is required to prevent possible damage or degradation of G & N system and components.

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

3. All tools shall be in proper operating condition.

4. A thorough visual examination of all equipment shall be performed to detect possible physical damage and to check for sharp edges and abrasion points which could be hazardous to personnel installing G & N equipment as well as to cable bundles, harnesses and connectors.

B. PREPARATIONS

1. Insure that all JDC's necessary to perform the desired testing are available. Record on data sheet.

VERIFICATION WITH SIDL REQUIRED BEFORE USE

PREPARE GSE FOR LEM G & N **JOB** SYSTEM TESTING	**JDC** 12607 **REV** G **PAGE** 2 **OF** 10
SUBSYSTEM LEM G & N SYSTEM	**ASSY**

2. Insure that all items of test equipment have been calibrated and adjusted in accordance with the applicable Quality Assurance Implementation Plan. Record on data sheet.

3. Insure that G & N System power cable W137 is disconnected.

C. PROCEDURES

1. Place Prime Power Circuit breaker located on the back of the OIA console to OFF.

2. Insure that cables W120, W132, W134 and W141 are attached to the Boom.

3. Insure that the cables listed in Table 1 are connected. (Exceptions noted). (See Figure 1.)

The following JDC's are to be used if operating procedures for GSE Commercial test equipment are required during use of all JDC's necessary to perform the desired testing.

INDEX FOR COMMERCIAL EQUIPMENT JDC OPERATING INSTRUCTIONS

Equipment Nomenclature	JDC Description	JDC Number
Auxiliary input panel	Applying auxiliary signals to digital voltmeter, phase angle voltmeter, dual beam oscilloscope, and counter	18103
	Applying PSA test point adapter and PTA/PEA test point adapter signals to dual beam oscilloscope	18204
	Applying PSA test point adapter signals to dual beam oscilloscope	18104
	Operation - general	18050
Counter	Applying auxiliary signals	18103

PROCEDURE

1. Connect GSE Cable W137-P2 to 56P8 and W135 to 50P1. Do not connect to GSE Distribution Box.

2. Insure that; W138, W142, W120, W136, W139, W131, W226 and W132 are not connected.

3. Using a wheatstone bridge, measure the resistance between following pins:

	GRD SYSTEM	FROM (+)	GRD SYSTEM	TO (-)
a.	0 VDC IMU	W137-P1-B	0 VDC CDU	W137-P1-M
b.	0 VDC IMU	W137-P1-B	0 VDC LGC	W137-P1-L
c.	0 VDC LGC	W137-P1-L	0 VDC CDU	W137-P1-M
d.	0 VDC Optics Heater	W135-P1-K	115V 400 cps Optics Low	W135-P1-N

SUBSYSTEM LEM G & N SYSTEM	ASSY

CAUTION: Extreme care must be exercised when connecting harness connectors to component connectors to prevent pin and jack damage.

3. Connect 56P4 of the "A" harness to the LGC and make resistance measurement as follows:

a. Visually inspect connector 56P4 and LGC connector to insure that pins and sockets are not bent or damaged. Install gasket on LGC connector.

b. Carefully locate harness plug 56P4 on the guide pins of LGC connector, ease plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

d. On the sides of the connector, tighten the two captive screws and torque to 19±1 in-lbs.

e. Using a Wheatstone Bridge, measure the resistance between point E2 and Facility Ground. Record.

4. Using a Wheatstone Bridge, measure the resistance between the following pins:

	FROM (+)	TO (-)
a.	W137-P1-A	W137-P1-B
b.	W137-P1-H	W137-P1-B

TOOLS AND MATERIAL

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

B. PROCEDURE

1. Connect the cables as indicated in Table 1. (See Figure 1.)

NOTE: Connector 35A1J1 is not mated at this time because heaters must remain attached to provide power through the portable temperature controller until power can be supplied by the GSE.

	J3	P2	W138 (6900040)	P1	J26	GDB

*Extreme care must be exercised when connecting harness connectors to component connectors to prevent pin and jack damage. Use the following procedure to properly connect 56P4 to 05A5J1 and 56P1 to J1:

a. Visually inspect 56P4 and 56P1 of "A" harness, 05A5J1 of LGC and J1 of SCM Breakout to insure that pins and sockets are not bent or damaged.

b. Install gasket on LGC connector and SCM Breakout connector.

c. Carefully locate 56P4 on the guide pins of 05A5J1, ease plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

d. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

e. On the sides of the connector, tighten the two captive screws and torque to 19±1 in-lbs.

f. Carefully locate 56P1 on the guide pins of J1 on SCM Breakout, ease the plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

g. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

h. On the sides of the connector, tighten the two captive screws and torque to 19±1 in-lbs.

Cable Connections

From	Conn. No.		Cable and Drawing No.	Conn. No.		To
SCM	J4	P1	W142 (6900041)	P2	J1	TPA-2
				P3	J2	
	J3	P2	W138 (6900040)	P1	J26	GDB

*Extreme care must be exercised when connecting harness connectors to component connectors to prevent pin and jack damage. Use the following procedure to properly connect 56P4 to 05A5J1 and 56P1 to J1:

a. Visually inspect 56P4 and 56P1 of "A" harness, 05A5J1 of LGC and J1 of SCM Breakout to insure that pins and sockets are not bent or damaged.

b. Install gasket on LGC connector and SCM Breakout connector.

c. Carefully locate 56P4 on the guide pins of 05A5J1, ease plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

d. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

e. On the sides of the connector, tighten the two captive screws and torque to 19±1 in-lbs.

f. Carefully locate 56P1 on the guide pins of J1 on SCM Breakout, ease the plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

g. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19±1 in-lbs.

h. On the sides of the connector, tighten the two captive screws and torque to 19±1 in-lbs.

TOOLS AND MATERIAL

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

B. PROCEDURE

1. Connect the cables as indicated in Table 1. (See Figure 1.)

NOTE: Connector 35A1J1 is not mated at this time because heaters must remain attached to provide power through the portable temperature controller until power can be supplied by the GSE.

INTERVAL

TOOLS AND MATERIAL

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

B. PROCEDURE

1. Connect the cables as indicated in Table 1. (See Figure 1.)

NOTE: 1. Connector 35A1J1 is not mated at this time because heaters must remain attached to provide power through the portable temperature controller until power can be supplied by the GSE.

2. Connection of cable W226 between the buffer assembly and the LGC test connector is necessary only when performing JDC's which specify this connection. In JDC's which do not specify connection of P1 of cable W226 to the LGC test connector, insure that connector assembly (2003099) is installed on the LGC test connector.

IMPORTANT

INTERVAL

TOOLS AND MATERIAL

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

B. PROCEDURE

NOTE: When mating a microdot plug to a receptacle, observe the following procedures to avoid possible damage to the connectors. Microdot connectors have a locking action which is opposite to that of most electrical connectors; that is, the locking ring is NOT free to rotate when plug and receptacle are NOT engaged.

1. Inspect the plug to make sure that the scribe mark next to the word ENGAGE on the locking ring is aligned with the scribe mark on the main body of the connector. Use light finger pressure to assure that the ring does NOT freely rotate from ENGAGE to LOCK position.

2. With the connector aligned to the receptacle along the insertion axis, as indicated by position lines, and with side forces relieved (which may require grasping harness with free hand), hold locking ring of plug between thumb and

VERIFICATION WITH SIDL REQUIRED BEFORE USE

SUBSYSTEM LEM G & N SYSTEM | **ASSY**

forefinger. Press into receptacle. When the connectors are fully engaged, an audible click will be heard.

3. Check retention by grasping locking ring between thumb and forefinger and exerting a moderate pull force. If the connectors disengage, improper mating is indicated.

4. Use fingertip pressure to rotate the locking ring from ENGAGE to LOCK position when the connectors are fully mated. Check locking action by exerting a light pull on the connector.

When disengaging microdot connectors, observe the following procedures to avoid damage to the plug or receptacle.

5. Grasp locking ring and rotate from LOCK to ENGAGE position (scribe mark next to word LOCK on locking ring aligned with scribe mark on main body of connector.)

CAUTION: Always use disengagement tool specified in following step. Manual disengagement may damage connector.

6. Insert the finger part of special tool FA 757702-007 between the facing surfaces of the plug and receptacle. Insert tool to full engagement position for maximum leverage. Grasp tool handle and rotate in an arc about the axis perpendicular to the connector axis to disengage connectors.

1. Connect the cables as indicated in Table 1. (See Figure 1.)

NOTE: 1. Connector 35A1J1 is not mated at this time because heaters must remain attached to provide power through the portable temperature controller until power can be supplied by the GSE.

2. Connection of cable W226 between the buffer assembly and the LGC test connector is necessary only when performing JDC's which specify this connection. In JDC's which do not specify connection of P1 of cable W226 to the LGC test connector, insure that connector assembly (2003099) is installed on the LGC test connector.

IMPORTANT

See below.

INTERVAL

TOOLS AND MATERIAL

IMPORTANT:

Refer to JDC 18100 for lubrication instructions prior to engaging any screw or bolt into header helicoil inserts, and for helicoil insert cleaning instructions after all testing has been completed or prior to spacecraft installation.

A. SAFETY REQUIREMENTS

1. All circuit breakers supplying OIA power to G & N equipment shall be in the OFF position.

2. All signal carrying circuits beginning, terminating, or going through the G & N equipment shall be de-energized, except for IMU auxiliary temperature control.

B. PROCEDURE

NOTE: When mating a microdot plug to a receptacle, observe the following procedures to avoid possible damage to the connectors. Microdot connectors have a locking action which is opposite to that of most electrical connectors; that is, the locking ring is NOT free to rotate when plug and receptacle are NOT engaged.

1. Inspect the plug to make sure that the scribe mark next to the word ENGAGE on the locking ring is aligned with the scribe mark on the main body of the connector. Use light finger pressure to assure that the ring does NOT freely rotate from ENGAGE to LOCK position.

2. With the connector aligned to the receptacle along the insertion

ASSY

axis, as indicated by position lines, and with side forces relieved (which may require grasping harness with free hand), hold locking ring of plug between thumb and forefinger. Press into receptacle. When the connectors are fully engaged, an audible click will be heard.

3. Check retention by grasping locking ring between thumb and forefinger and exerting a moderate pull force. If the connectors disengage, improper mating is indicated.

4. Use fingertip pressure to rotate the locking ring from ENGAGE to LOCK position when the connectors are fully mated. Check locking action by exerting a light pull on the connector.

When disengaging microdot connectors, observe the following procedures to avoid damage to the plug or receptacle.

5. Grasp locking ring and rotate from LOCK to ENGAGE position (scribe mark next to word LOCK on locking ring aligned with scribe mark on main body of connector.)

CAUTION: Always use disengagement tool specified in following step. Manual disengagement may damage connector.

6. Insert the finger part of special tool FA 757702-007 between the facing surfaces of the plug and receptacle. Insert tool to full engagement position for maximum leverage. Grasp tool handle and rotate in an arc about the axis perpendicular to the connector axis to disengage connectors.

1. Connect the cables as indicated in Table 1. (See Figure 1.)

NOTE: 1. Connector 35A1J1 is not mated at this time because heaters must remain attached to provide power through the portable temperature controller until power can be supplied by the GSE.

2. Connection of cable W226 between the buffer assembly and the LGC test connector is necessary only when performing JDC's which specify this connection. In JDC's which do not specify connection of P1 of cable W226 to the LGC test connector, insure that connector assembly (2003099) is installed on the LGC test connector.

PTA	Test Conn.	P2	W144 (6900006)	P1	J1	TPA-1	
SCA Breakout	J1	56P1	"A" Harness*				

*Extreme care must be exercised when connecting harness connectors to component connectors to prevent pin and jack damage. Use the following procedure to properly connect 56P1 to J1:

a. Visually inspect 56P1 of "A" harness and J1 of SCA Breakout to insure that pins and sockets are not bent or damaged.

SUBSYSTEM LEM G & N SYSTEM

ASSY

b. Carefully locate 56P1 on the guide pins of J1 on SCA Breakout, ease the plug onto the connector maintaining parallelism between plug and connector as closely as possible and engage the four corner jackscrews until finger tight.

c. To fully engage plug and connector, turn each jackscrew one turn at a time moving around the connector in sequence. When fully engaged, torque each jackscrew to 19 ±1 in-lbs.

d. On the sides of the connector, tighten the two captive screws and torque to 19 ±1 in-lbs.
